Apple and Debbie,

Greg Orehowsky and I are traveling to Ann Arbor this Thursday afternoon. I've just put in my travel and Greg is working on getting his finalized. We need these approved ASAP.

We will be following up on these TAs with another trip scheduled for early October to go to El Monte, California. Just a heads up that that travel request is coming today as well and will need approval.

Per Jacqueline's email below, she asked that you approve this travel since she is on leave, and also asked that we let Debbie McCray know that this travel will need to be approved ASAP.

Thanks!

I received a voicemail from Linc. He is trying to coordinate with other DOJ enforcement for a coordinated visit for this Friday. So lets get our travel in for that and I'll let you know more details as I have them.

FYI – I'll be offline for approx.. the next two hours.

Thanks,

mk

Mr. Brooks,

I'm doing some reporting on the VW emissions violations. I'm trying to find out more about the role played by Stuart Drake of Kirkland & Ellis for VW.

Can you tell me if he's been representing VW all along in this investigation, or was he recently brought in?

Can you tell me anything else about his role in this case?

We could talk on background if you prefer not to be quoted by name.

MCCARTHY ADDRESSES VW EMISSIONS SCANDAL FOR FIRST TIME: EPA Administrator Gina McCarthy addressed Volkswagen skirting federal emissions standards with a software workaround on Tuesday, saying her agency is "not going to sit...around and worry about whether others have it, we're going to find it." Speaking at a Wall Street Journal breakfast, McCarthy she and others inside the EPA are "upping our game in terms of going out and doing work to take a look at what we need to do with other vehicles." Video and transcript: http://on.wsj.com/1MolgXR

- Lobbyists, check your Rolodex for VW contacts: It's only a matter of time before K Streeters start to try to cash in on Volkswagen's emissions scandal. Congress is sure to look into how the company's software was used to get around U.S. emissions laws. The company spent $530,000 on lobbying during the first half of 2015, according to Senate lobbying disclosures. And it has only one - yes that's right - one outside lobbying firm. Akin Gump Strauss Hauer & Feld billed $140,000 on lobbying during the first six months of 2015. (ht POLITICO Influence)

Emily--could you please work with michael to find time for a VW update for the administrator? In addition to the people on the note, we should Larry Starfield and Laura Vaught. I know there's a lot of pope stuff going on so we'll need to work around that. We should definitely try to do it so Chris can be here in person.

Thanks

Subject: Re: Meeting request Christian Hey German Advisory Council on the Environment

Michael, we can offer a meeting at EPA for Mr. Hey on Wednesday, September 30th from 9:00 - 11:00 a.m. on the topics requested below.

The meeting will take place on the third floor of the Reagan Building. We also will need the standard spreadsheet containing the required clearance information for all German visitors (including Embassy staff) who will attend the meeting.

Please let me know if you have questions.

Thanks and regards,

Anna

Subject: Meeting request Christian Hey German Advisory Council on the Environment

Dear Anna,

Thanks again for the help re Volkswagen. I am now writing to you on a more positive matter. Christian Hey, general secretary of the German Advisory Council on the Environment (SRU) (http://www.umweltrat.de/EN/TheGermanAdvisoryCouncilOnTheEnvironment/thegermanadvisorycouncilontheer , an expert advisory body of the German Environment Agency (UBA) and the Federal Ministry of the Environment, will be in town next week (Sept 30). The SRU consists of government employees (Christian Hey is employed by the UBA) and appointed university professors who describe and assess environmental conditions, problems, and political trends and point out solutions and preventive measures. The SRU also submits an Environmental Report to the German federal government every four years. The report describes and assesses environmental policy developments and provides in-depth analyses of selected topics. Christian Hey is very interested in some comments your colleague William Jordan, deputy director in the office of pesticide programs, made recently on TTIP (see press article below). Do you think he would be available for a meeting? I am also wondering if Scot Hagerthey or one of his staff that worked on the ROE is interested to talk to Christian Hey about some of the environmental challenges they regard most pressing or they think are not so much on the public radar but warrant attention.

I've worked with Christian for a few years in one of my previous jobs in Berlin and can say that he is extremely knowledgeable on a wide range of topics.

Many thanks,

Michael

Inside U.S. Trade - 06/27/2014

EPA, Consumer Safety Regulator Express Skepticism About TTIP Benefits

Posted: June 26, 2014

Representatives of two U.S. regulatory agencies on June 24 expressed varying degrees of skepticism toward the idea of expanded regulatory cooperation with the European Union under a U.S.-EU trade deal, and raised fears that an agreement could slow down their rule making.

Robert Adler, acting chair of the U.S. Consumer Product Safety Commission (CPSC), said he worries including regulatory cooperation obligations in the Transatlantic Trade and Investment Partnership (TTIP) could make his agency even more hamstrung than it already is when it comes to issuing regulations.

Adler directly rebuffed the idea -- proposed by the European Commission -- that the trade deal should establish a new "Regulatory Cooperation Council" that would allow greater input from EU regulators and stakeholders in the U.S. regulatory process, and vice-versa.

Imposing such a procedure "could extend an incredibly cumbersome process that we face when we write regulations," Adler said. He explained that in 1981, Congress amended the CPSC's statute to require extensive cost-benefit analyses before publishing a rule. The consequence is that the agency has been able to issue only nine safety standards in the intervening 33 years, he said.

"The idea that we would then have to take a rule that we have spent so much time writing and go to an additional approval means that you're going to have many, many, many years of waiting for safety regulation. And I think that we all know that safety delayed is safety denied in too many respects," he said at an event in Washington hosted by

the Transatlantic Consumer Dialogue (TACD).

Adler said some of his office's expert-level officials have been directly involved in the TTIP negotiations, and have helped to explain -- for example -- U.S. rules on flame-retardant treatments for textiles. He said the EU seemed satisfied enough with the explanation so as not to regard these rules as a trade barrier to be tackled through TTIP. But he expressed fear that other CPSC regulations may come into the crosshairs of negotiators.

Separately, William Jordan, deputy director in the office of pesticide programs at the Environmental Protection Agency (EPA), signaled skepticism toward TTIP regulatory cooperation efforts by saying it remains to be seen whether they will be "productive or a big waste of time."

Speaking on a different panel at the same TACD event, Jordan also acknowledged evaluating the potential impact of a rule on trans-Atlantic trade would add to a pile of more than a dozen assessments the EPA must conduct for other areas in publishing a rule, potentially slowing it down further.

"The fact that there may be trade impacts from a regulatory decision doesn't necessarily mean that it changes the regulatory decision, but it might mean that you look for different ways of achieving or implementing a goal," Jordan said.

"The downside that I see is adding yet one more kind of analysis to develop when taking a regulatory action … There are usually about 17 sections that go at the end of every rule making the EPA does. To go to another one adds just a little bit more work and has the potential to slow things down. I think the serious question is: Is it worth it?"

At the same time, Jordan said he sees some possible benefits from cooperating with the EU through its proposed Regulatory Cooperation Council.

He suggested doing so would be somewhat helpful, if only so U.S. officials could go to one forum and have access to all the relevant EU officials on a topic -- something he described as difficult given the EU's complicated bureaucracy. Working together on risk assessment for pesticides, for example, might also reduce the likelihood the U.S and EU would come to different decisions on risk management.

Adler, the acting CPSC chair, also raised questions about whether reducing regulatory differencesbetween the U.S. and EU in the consumer products sector, which includes things like apparel and toys, would really lead to added economic gains for businesses on either side of the Atlantic.

He said his experience has shown companies typically make their products to the highest standard of the markets they sell to, so they are compliant in all of them -- something he contended is good for consumers, and does not incur the expense of maintaining different inventories for different safety standards.

"I think the annoyance factor of different safety systems is huge with our friends in the business community. I personally remain skeptical that the out-of-pocket costs are as great as the annoyance," he said.

Adler added his agency does not have the staff or resources to figure out how standards could be aligned with regulations in other jurisdictions, although it does take international standards and best practices into account. He said he has exhorted businesses who complain about divergent rules to submit detailed petitions demonstrating the two approaches are consistent and harmonizing them would reduce costs. But he said he has received no response to date from businesses.

"What our friends really seem to want is for CPSC to survey the market, find equivalent standards, and lead the charge to make our systems compatible," he said. "In other words, they want us to be the moving party. And I'm going to be very frank: That's not going to happen."

The Tennessean:

http://www.tennessean.com/story/news/politics/2015/09/22/tn-senate-leader-requests-hearing-on-volkswagen-issues/72625196/

TN Senate leader requests hearing on VW cheating issues

Dave Boucher

A leader in the Tennessee Senate is asking a fellow lawmaker to call a hearing to look at how cheating revelations regarding Volkswagen may affect the state.

Senate Speaker Pro Tem Bo Watson, R-Hixson, notes the German automaker's significant investment in Tennessee as a reason he wants Senate Finance, Ways and Means Committee Chairman Randy McNally, R-Oak Ridge, to schedule a hearing.

"While all of the relevant facts may remain unreported at this time, I am very concerned as to the financial impact these violations could present to the state of Tennessee," Watson writes.

"As the chairman is aware, Tennesseans have made a significant investment in Volkswagen and any action that threatens the stability and sustainability of the investment should be reviewed by the finance committee, without delay," he continued later in the letter.

Tennessee provided Volkswagen with $165 million in grants in connection to its massive facility in Chattanooga, where more than 3,200 people are employed. Volkswagen received more than $577 million in incentives to build the plant in Chattanooga in 2008, The Associated Press reported. The AP also noted another state and local package worth up to $300 million was offered last year to persuade VW to expand the Chattanooga plant to build a new SUV in Tennessee as opposed to elsewhere.

Volkswagen CEO Martin Winkerton apologized Tuesday in the wake of accusations from the U.S. Environmental Protection Agency that the company had intentionally installed software that allowed its cars to cheat in emissions tests. The company said the emissions software affected 11 million cars worldwide.

On Tuesday it was reported the company has set aside more than $7 billion in anticipation of fines. USA TODAY reported recently that the car company could face $18 billion in fines from the federal government.

Volkswagen sets aside $7.3B over emissions scandal

On Monday Gov. Bill Haslam said he was concerned when he heard the revelations. He said he'd only spoken briefly with representatives from the EPA and Volkswagen.

"Volkswagen is somebody that is a major partner for us in the state of Tennessee, both in terms of investment and the jobs created. We're obviously very interested in their continued growth,

but they're going to have to address this issue," Haslam told reporters Monday.

Lt. Gov. Ron Ramsey, R-Blountville, told the Chattanooga Times Free Press that the revelations are "depressing, hard to believe. On and on. We've made a huge investment."

Watson asked McNally to call the public meeting to discuss potential impact on Tennessee as soon as possible.

Volkswagen Sets Aside $7.2 Billion to Pay for Emissions Cheating Scandal

by PAUL A. EISENSTEIN

Volkswagen said Tuesday it is setting aside more than $7.2 billion to cover the anticipated cost of resolving its diesel emissions cheating scandal, a figure that could be eclipsed by potential penalties and lawsuits facing the German automaker in the U.S.

The issue, meanwhile, now is spreading to other markets, with VW confirming it used the same illicit software - dubbed a "defeat device" by U.S. regulators - on 11 million diesel vehicles sold

worldwide. That has triggered calls for new investigations in markets from South Korea to the European Union.

The money that VW is setting aside, 6.5 billion euros, is part of the company's efforts to "win back the trust of our customers," VW said in a statement Tuesday.

Meanwhile, it noted that it is "working intensely" to find a technical solution to removing the software without reducing the performance of affected VW products. A total of 488,000 VW and Audi brand vehicles equipped with four-cylinder engines were recalled Friday, while the automaker ordered dealers to stop selling products equipped with those diesels.

Concerns about the mounting costs and potential impact to VW's reputation have led to a panic among the company's investors. On Monday, the value of VW shares plunged by 17 percent, and the sell-off was continuing midday Tuesday on the German exchange.

The crisis could lead to a shake-up in management at Volkswagen AG, industry analysts have warned.

The U.S. Environmental Protection Administration announced Friday that the automaker had surreptitiously equipped its diesel vehicles with software designed to recognize when those products were being tested on a dynamometer, essentially an automotive treadmill. In such a situation, the full complement of emissions controls systems would operate at their maximum, bringing the vehicles into compliance with U.S. - and even tougher California - emissions standards.

But once the testing would be completed, according to the EPA, the vehicles would revert to a different mode, effectively allowing emissions levels to increase by as much as 40 times.

In its new statement, VW gave more details, admitting that "discrepancies" related to vehicles with Type EA 189 engines and involved some 11 million vehicles worldwide.

"A noticeable deviation between bench test results and actual road use was established solely for this type of engine," the VW statement said. "Volkswagen is working intensely to eliminate these deviations through technical measures."

While the maker acknowledged the computer control systems on 11 million vehicles contain the code, it also claimed that the "majority of these engines the software does not have any effect."

The U.S. has the world's toughest diesel emissions standards, largely focusing on levels of micro-fine particulates and smog-causing oxides of nitrogen. In Europe, where the emphasis is on global warming gases like CO2, diesels handily meet test standards because they are so energy efficient.

Even so, there are mounting calls in Europe for a full investigation of the VW diesel test scandal, and CEO Martin Winterkorn has told Germany's transit ministry the company will fully cooperate with its investigation. Officials in South Korea also have called for an investigation.

Meanwhile, the U.S. Justice Department has reportedly taken the preliminary steps to open a criminal investigation.

Whether the $7.3 billion set aside is enough to cover VW's costs from the scandal remains to be seen. According to EPA rules, VW could be fined up to $37,500 for each vehicle not in compliance with emissions regulations, or a total of around $18 billion. California regulators could issue their own fines.

Several law firms also have taken initial steps of their own to bring class action lawsuits against Volkswagen on behalf of owners.

But perhaps the biggest question concerns the impact the scandal will have on VW's image and sales. The maker overtook Toyota to become the world's best-selling automaker during the first half of 2015. But it has been struggling to build momentum in the critical American market where about a quarter of its sales are diesel-powered vehicles. For now, VW has halted the sale

of those models until it can come up with a fix for the faulty software.

Volkswagen probed by states over pollution cheating

Christie Smythe, Bloomberg News

Several states have begun an investigation into Volkswagen's admission that it equipped cars with technology to cheat federal air pollution tests, joining federal investigators and a growing list of countries probing the German automaker.

Wolfsburg, Germany-based Volkswagen said on Sept. 18 that it used "defeat device" software to beat emissions tests in labs. The diesel vehicles spewed as much as 40 times the legal limit of pollutants when they were on the road, the Environmental Protection Agency alleges. Volkswagen said it's cooperating with U.S. officials.

The matter may cost Volkswagen $18 billion in penalties from the EPA, based on a maximum $37,500 violation for each of nearly a half-million diesel versions of the VW Jetta, Golf, Beetle and Passat and the Audi A3.

Matt Mittenthal, a spokesman for New York Attorney General Eric Schneiderman, said in an e-mail today that he could confirm New York is part of the multistate group but was unable to say

what other states were part of the probe.

The U.S. Justice Department has also begun a criminal probe, according to officials who spoke on a condition of anonymity.

The German government opened its own probe on Tuesday. Environment Canada also started an investigation, promising unspecified "enforcement action" if the car maker cheated in that country.

Volkswagen Debacle on Financial Par With BP Oil Spill

SEPT. 22, 2015

By ANTONY CURRIE and OLAF STORBECK

— Volkswagen's cheating on clean air rules in the United States has driven investors into a deep funk.

The German carmaker's market capitalization shrank 16.6 billion euros, or $18.6 billion, in just over a day, after it was caught falsifying emissions on certain cars sold in the United States. The

eventual cost could be higher. Although other carmakers have paid less for misdeeds, the better analogy might be oil: BP's 2010 Deepwater Horizon fiasco.

Rival carmakers got off relatively lightly for recent transgressions in the United States with more disastrous immediate consequences. General Motors paid $900 million to settle a lawsuit over faulty ignition switches linked to 124 deaths. Toyota paid $1.2 billion last year for malfunctioning accelerators tied to fewer fatalities.

No deaths can be directly pinpointed to Volkswagen blocking accurate checks on emissions – though the software installed in some vehicles hid levels of harmful nitrogen oxide up to 40 times above permitted levels.

The environmental twist perhaps makes BP's disastrous Gulf of Mexico oil spill a better comparison. Initial total cost estimates by analysts were as low as $3.5 billion. The final bill under the Clean Water Act was $5.5 billion, less than half the maximum fine. But BP's other costs, including damages, ballooned. All in, BP ended up setting aside almost $55 billion in fines, compensation and cleanup costs.

The Clean Air Act allows the Environmental Protection Agency to charge up to $37,500 a vehicle for any breaches. With 482,000 affected cars, that's $18 billion. The E.P.A. could be kinder than that, but Volkswagen, run by Martin Winterkorn, cheated government tests for six years, dissembled when confronted and meanwhile lauded Volkswagen's status as an environmentally sustainable carmaker.

Volkswagen can pay $18 billion, over time, and retain its credit rating. It has €21 billion in net cash, with more coming from planned divestitures.

That, though, doesn't factor in other costs, including recalls, refits, vehicle buybacks and class-action lawsuits – or the possibility that Volkswagen's emissions shenanigans were more pervasive. Diesel cars account for more than half its sales in Europe, its largest market, though with more lenient nitrogen oxide standards. If the scandal undermines the business case for Volkswagen's diesel engines, a €16.6 billion drop in value will look like a country jaunt.

http://www.washingtonpost.com/news/wonkblog/wp/2015/09/22/anatomy-of-volkswagons-deception-the-recall-that-never-fixed-any-cars/

Anatomy of Volkswagen's deception: The recall that never fixed any cars.

By Peter Whoriskey and Joby Warrick September 22 at 12:20 PM

Volkswagen's decision to equip 11 million vehicles with devices to cheat emissions tests worldwide has sent the company into an acute corporate crisis in recent days. But on December 2, 2014, the company assured U.S. and California regulators that their engineers had a straightforward solution.

Volkswagen told officials then that a software change would remedy the overflow of pollution emitted by their diesel cars, according to state and federal letters to the company. At the time, Volkswagen proposed a "voluntary recall" of about 500,000 vehicles. State and federal officials approved the plan.

That fix was either a technical failure or, some officials said, another ruse.

By May of this year, California tests showed that "the recall calibration did reduce emissions to some degree but NOx emissions were still significantly higher than expected."

The extent of the recall, which is discussed in letters between government and company officials, is unknown. Company officials wouldn't say this week how many recall notification letters Volkswagen issued to consumers, and how many consumers brought their cars in for the purported fix.

But the incident is one of the highlights in what federal and state officials have likened to a cat-and-mouse game between regulators and one of the world's largest automakers.

"They basically ran out of excuses," said Stanley Young, spokesperson for the California Air Resources Board. "They would say the tests weren't at the right temperature, or some other issue. We had them in [to our offices] several times."

EPA administrator Gina McCarthy said on Tuesday that the agency would step up efforts to look for cheating by other manufacturers, though she suggested that Volkswagen was an "outlier" in the extent of its cheating to defeat emissions standards.

"We are not going to sit down around and worry about whether or not there are other devices. We're going to find it," she said. "So right now we're upping our game in terms of going out and doing the work to take a look at what we need to do with other vehicles."

The company's dire diesel troubles have erupted over just a few days, but they were a long time in gestation.

The regulations that shaped the design of the diesel engines were put in place more than 15 years ago, when the EPA finalized rules that raised the emission standards for diesel cars.

After a years-long grace period, the tough standards were phased in between 2004 and 2007. At the time, the government acknowledged that meeting the standards for NOx, or nitrogen oxide, as well as soot, would be difficult.

"Manufacturers have expressed concerns that diesel-fueled vehicles would have difficulty meeting NOx and particulate matter levels like those contained in today's rule," EPA officials wrote in issuing the new standards. "Clearly, these standards will be challenging."

For a time, Volkswagen and other automakers stepped back from the U.S. diesel car market. It was a time to retool. Experts said the challenge of making a diesel engine clean enough for the U.S. standards - without compromising how the engine works - is very difficult.

"NOx is more of a challenge for diesel engines than it is for gasoline engines," said John Storey, distinguished research and development staff member at Oak Ridge National Laboratory. "The strategies companies use to clean them up all have an impact on performance, fuel economy and maintenance."

The engineering hurdles in controlling diesel emissions are high enough, some experts said, that they may provide an incentive for companies to skirt the rules.

"I can't say I'm surprised," John M. DeCicco, Ph.D. Research Professor at the University of Michigan Energy Institute, of the recent revelations. "The temptation to game the system with a defeat device is definitely high because of the technical challenges."

In 2008, Volkswagen came back with a diesel version of the Jetta. The company touted it as an example of the "clean diesel." It won raves, including "Green Car of the Year" at the Los Angeles Auto Show.

"After a three-year break that seemed interminable to fans, Volkswagen's back in the U.S. diesel-car market with a clean-burning diesel in its popular Jetta compact sedan," USA Today told readers.

But what seemed like a breakthrough seems now, in the light of recent revelations, like a massive cheat.

The company's two-liter diesel engines in the U.S. had been equipped with a "defeat device" that allowed the cars to pass federal emissions tests despite emitting more than 10 times the permitted amounts of NOx when it is on the road. Those emissions help produce smog on hot summer days, triggering a variety of health problems, particularly for asthmatics and other people with breathing difficulties.

As has been widely reported, the emission problems were detected in a May 2014 report by the International Council on Clean Transportation and West Virginia University.

The results were presented to the company and several months later, in December 2014, the company told California regulators that they had a fix. They would "recalibrate" the software that runs the engine.

"Based on this meeting, VW initiated a voluntary recall...This recall was claimed to have fixed among other things, the increased real world driving NOx issue," according to a recent letter from the California Air Resources Board to the company.

By May of this year, California officials had run road tests on cars altered as under the recall. Despite the fix, the car showed higher than expected NOx emissions. California engineers also created a special dynamometer test, apparently to address company concerns that the previous testing was unfair.

California Air Resources Board "has determined that the previous recall did not address the high on-road NOx emissions, and also resulted in the vehicle failing certification standards," it told the company earlier this month.

McCarthy, speaking to reporters in Washington, acknowledged that the Volkswagen software ruse was "particularly difficult for us to detect. We haven't found similar types before but we'll take a look and make sure we're attacking it successfully," she said.

McCarthy defended the EPA's regulatory standards as reasonable, and said most other car manufacturers appear to have found a way to comply.

"This is about a NOX emission standard that was put in place a few decades ago. The industry knew what was happening. We feel pretty confident the industry has been innovating to be able to meet this standard," she said. "So we don't think that this problem with the standards at all."

McCarthy said she was gratified by Volkswagen's aggressive response in acknowledging its mistakes, even as she criticized the company for its years of deliberate deception.

"I think it will be very difficult for Volkswagen at this going to be looked at as anything other than a real outlier," she said.

How VW's 'defeat device' cheated on EPA emissions tests

Clive Cookson, Science Editor

The "defeat device" that Volkswagen used to cheat on US emissions testing sounds as if a secret little black box was hidden deep in the diesel engine just waiting to switch anti-pollution controls on during government inspections.

During normal driving, these controls are relaxed, which improves performance and reduces engine wear.

"The test cycles are very formal and well established, so priming a vehicle to sense when it is being tested is potentially quite straightforward," said Professor Alastair Lewis, an air pollution expert at York University in the UK. "For example are only its drive wheels turning, is the acceleration unnaturally smooth, or constant speeds too precise for a human driver?"

Modern "clean diesel" engines aim to reduce pollution in a series of computer-controlled steps. For example, the computer may adjust the ratio of air to fuel in the combustion chamber, change the operating temperature or alter the rate at which exhaust gases flow through catalytic converters and filters.

Another refinement is to inject a chemical called urea into the exhaust stream. It then reacts with polluting nitrogen oxides (NOx) and converts them into harmless nitrogen and water.

"A huge amount of complex electronics controls it all," said Roger Kemp, professor of engineering at Lancaster University. "The code in the software gives thousands of different usage patterns corresponding to different combinations of inputs.

"There is a trade-off between pollution control and engine performance," Prof Kemp added. For example running at a hotter temperature may cut emissions but reduce engine life.

Bosch, the German car parts company, supplies components to VW, including fuel injection and exhaust treatment systems that reduce emissions. But people familiar with the cars said VW writes the software that deploys the equipment.

According to the EPA's notice of violation, the software ran the engine with "dyno calibration" settings designed to minimise pollution when it detected testing in progress (dyno refers to dynamometer equipment at the test centre). For the rest of the time it ran on "road calibration" which puts less emphasis on reducing emissions.

Even when the software switches to road running, a modern diesel engine is much less polluting than its filthy predecessors, Prof Kemp pointed out. Its filters and combustion chamber are particularly effective at cutting emissions of the tiny soot particles that used to belch out of ill-tuned engines (and still do in parts of the developing world).

The EPA allegations focus on NOx, reactive gases that are one of the main sources of urban smog and lung-irritating ozone pollution. The violation came to light when researchers at West Virginia University tracked emissions from VW diesel cars on the road and found that NOx soared to levels 10 to 40 times higher than the EPA permits.

Many air pollution experts have long believed that other manufacturers operate their own versions of VW's defeat devices.

"Virtually all new vehicles in recent years appear to emit substantially more NOx in the real-world than they do when tested in labs, irrespective of manufacturer," said Prof Lewis. "VW appear to have been caught red-handed, but it would seem highly likely that others have also played dubious games to pass emissions tests."

Ian Colbeck, professor of aerosol science at the University of Essex, commented: "It has been observed for some time that real world driving conditions do not deliver the emission reductions shown in the laboratory. The European Commission will require real world tests in 2017."

Volkswagen emission scandal widens: 11 million cars affected

Nathan Bomey

Investors crush Volkswagen shares as company sets aside $7.3 billion to address software that manipulates emissions tests.

Volkswagen's emissions scandal ballooned Tuesday as the automaker said it affects 11 million vehicles worldwide and will require the company to set aside 6.5 billion euro ($7.3 billion).

The startling admission instantly makes the crisis one of the most expensive automotive scandals in recent memory.

The crisis also threatens to upend the company on its rapid path to becoming the world's largest automaker. Volkswagen had seized the title from Toyota for the first six months of 2015.

"This could damage the Volkswagen brand globally for years to come," said former automotive marketing executive Peter De Lorenzo, blogger at Autoextremist.com, in an interview. "Trust and belief in the brand has been broken."

Volkswagen CEO Martin Winterkorn pledged to regain the public's trust and rectify the company's mistakes, amid speculation that he could lose his job over the crisis. Winterkorn's contract, coincidentally, is up for renewal at the automaker's board meeting Friday.

In a video statement Tuesday he said he's "endlessly sorry" for the situation but pledged to stay on the job, according to several reports translating the German remarks.

Investors crushed the Germans automaker's stock, driving shares down 18% as of 9:47 a.m. ET, a day after the stock plunged 19%.

The crisis began Friday when the U.S. Environmental Protection Agency accused Volkswagen of installing sophisticated software on nearly 500,000 U.S. vehicles to manipulate emissions tests.

The technology tricks regulators into believing that 4-cylinder diesel vehicles comply with emissions standards, but the cars are actually admitting harmful pollutants at rates of up to 40 times acceptable standards. Volkswagen quickly halted sales of the cars after the allegations surfaced.

The U.S. Justice Department has opened a criminal probe into the automaker's actions. The EPA's own investigation is ongoing, and foreign regulators are expected to launch their own probes.

"Volkswagen is working at full speed to clarify irregularities concerning a particular software used in diesel engines," the company said Tuesday in a statement.

The "discrepancies" affect vehicles with what it called "Type EA 189 engines," causing "a notable deviation between bench test results and actual road use."

The company added: "Volkswagen is working intensely to eliminate these deviations through technical measures."

Volkswagen said it would set aside 6.5 billion euro in its third quarter to address the matter and warned that the number could change.

In the U.S., the EPA could fine Volkswagen up to $37,500 per car, which would equal a maximum fine of some $18 billion.

"Volkswagen does not tolerate any kind of violation of laws whatsoever. It is and remains the top priority of the Board of Management to win back lost trust and to avert damage to our customers," the company said.

The scandal raises serious questions about whether high-level executives knew about the software, which had been installed on some nameplates for at least six consecutive model years.

Earlier this month a subcommittee of Volkswagen's board recommended that the full panel extend Winterkorn's contract through 2018. The official renewal at Friday's board meeting was viewed as a routine matter, but now it may be up in the air.

Winterkorn kept his job earlier this year after then-chairman Ferdinand Piech tried to displace him. Piech exited the company shortly after his failed effort.

De Lorenzo, the automotive marketing veteran, said Winterkorn will be forced to answer questions about his knowledge of the emissions scandal.

"He's very much detailed-oriented. He's always regaled his underlings with his depth of knowledge of detailed items that they would assume he wouldn't bother with," De Lorenzo said. "I think heads will roll and this could bring down Winterkorn and some of his trusted lieutenants."

Dave Sullivan, an analyst with AutoPacific, said the "chances of him coming out unscathed have got to be very small."

The EPA has said the company admitted to installing the software. The agency said the software affected the four-cylinder diesel versions of the 2009 to 2015 Jetta, Beetle, Golf, the 2014 and 2015 Passat and the 2009 to 2015 Audi A3.

The episode is likely to trigger a recall and a flurry of consumer lawsuits. It may prompt the company to compensate individual car owners or other measures.

European regulators are expected to place Volkswagen under intense scrutiny. But it scandal also could bode poorly for Volkswagen in the world's largest vehicle market, China, where Volkswagen is No. 1 by market share.

"The problem is the Chinese are starting to realize they have got to do something with their air and this could have an effect on the relationship the Chinese have with Volkswagen," Sullivan said.

The Environmental Protection Agency is working on new tests to detect cheating on the part of automakers in the wake of Volkswagen AG's massive cheating scandal.

EPA Administrator Gina McCarthy told reporters at a Wall Street Journal forum on Tuesday that the agency won't sit still and is "upping its game" to catch cheaters.

VW was able to evade U.S. emissions requirements for 482,000 2009-2015 diesel cars by using sophisticated software that only turned on emissions equipment during testing. It's not clear if VW did that to boost low-end torque, raise fuel efficiency or avoid more costly emissions requirements.

The fact that VW was able to get away with the cheating for nearly seven years suggests the agency must take new steps to detect bad behavior, analysts say. Cars are very sophisticated machines with more than 100 million lines of code.

The VW emissions issue came to the attention of the EPA in 2014 after independent analysis by researchers at West Virginia University — working with the International Council on Clean Transportation, a non-governmental organization — raised questions about emissions levels. After extensive testing, EPA confirmed that the vehicles were emitting up to 40 times the

allowable pollution in road use.

The EPA told The Detroit News on Friday that it was investigating whether other automakers had similar problems. But McCarthy said so far it appears VW is an "outlier."

This will not be the first time in recent years that EPA has had to change its rules to ensure companies are complying with emissions.

In February, the EPA issued new guidelines to automakers for conducting fuel economy testing. The move came after five major automakers have had to restate mileage ratings for certain models.

The guidelines detail how vehicles must be prepared before being tested — including what is an acceptable level of wear on the tires and how vehicles should be broken in prior to testing.

Also at issue are tests used to determine the impact of aerodynamic drag and tire rolling resistance on gas mileage. Currently, that is measured at 50 miles per hour. Under the new guidelines, automakers must measure the results at all speeds up to 70 mph.

In 2014, the agency said it was considering writing new formal regulations covering mileage labeling by automakers. Instead, it is opting to issue the guidelines. It typically takes EPA two to three years to write new legal binding mandates.

Chris Grundler, the EPA's director of the Office of Transportation and Air Quality, said in an interview in February that "it's a very dynamic time" in the auto industry, and the agency doesn't want to spend several years crafting rules that could be outdated when issued.

"Writing regulations takes time," Grundler said. "When you are working in the rapidly changing environment that we're in right now, we want to make sure that we are agile enough and flexible enough to change with those times."

He said new guidelines are aimed at getting better results. He noted that the EPA will follow the guidelines when it conducts audits of automaker testing.

In November, Korean automakers Hyundai Motor Co. and Kia Motors Corp. agreed to a record-setting $360 million settlement for overstating fuel economy ratings for 1.2 million 2011-13 U.S. vehicles. The settlement includes a $100 million civil penalty, forfeiting $210 million in greenhouse gas emission credits and spending $50 million to ensure independent auditing of its current and future vehicles.

After an investigation by the EPA, Hyundai and Kia in November 2012 agreed to restate expected gas mileage for 1.1 million vehicles in North America, including 900,000 in the United States. That reduced Hyundai-Kia's fleetwide average fuel economy from 27 to 26 mpg for the 2012 model year. Hyundai was forced to abandon claims that four models got 40 mpg.

In August 2013, Ford Motor Co. dropped mileage ratings for the 2013 C-Max hybrid from a combined 47 mpg to 43 mpg. In June 2014, Ford Motor Co. said it is lowering the fuel ratings on six new cars and would make payments of $125 to $1,050 to more than 200,000 owners.

The move was a significant embarrassment to Ford, which has emphasized the fuel efficiency of vehicles in its lineup. It was he second time in a year that Ford has had to correct its mileage numbers.

Under current rules, Ford was able to assign the same fuel efficiency rating to the C-Max as the Fusion hybrid because they're in the same family. While that's worked for conventional cars, it hasn't been as accurate for hybrids.

Other German automakers besides VW have faced EPA scrutiny. In October, BMW AG agreed to reduce its fuel economy ratings on four 2014 Mini Cooper models.

BMW reduced the combined fuel economy of the three-door manual transmission to 33 miles per gallon from 34 mpg, the three-door semi-automatic from 33 to 32, the Cooper S 3-door manual from 29 to 28 and the semi-automatic version from 31 to 30. The biggest fall is in the highway rating for the Cooper S 3-door manual will fall from 38 to 34 mpg.

Also last year, another Daimler AG agreed to lower the mpg ratings on two of its Mercedes-Benz vehicles after a government audit turned up a problem.

Mercedes-Benz made minor changes to two models. It will reduce the city mpg figure for the 2013-14 C300 to 19 mpg from 20 mpg, but the combined 22 mpg and 27 mpg highway value will remain the same. For the 2013-14 4-Matic PZEV the combined mpg fell to 22 mpg from 23 mpg, while the city and highway mpg figures both fell by 1 mpg to 19 and 28, respectively.

VW CEO: 'Endlessly sorry' as emissions scandal escalates

By Geir Moulson and Pan Pylas | AP September 22 at 11:32 AM

BERLIN — The crisis enveloping Volkswagen AG, the world's top-selling carmaker, escalated Tuesday as the company issued a profit warning following a stunning admission that some 11 million of its diesel vehicles worldwide were fitted with software at the center of a U.S.

emissions scandal.

The German company said it was setting aside around 6.5 billion euros ($7.3 billion) to cover the fallout from the scandal that has tarnished VW's reputation, raised questions over the future of CEO Martin Winterkorn and battered its share price.

Winterkorn pledged a fast and thorough investigation.

"Millions of people across the world trust our brands, our cars and our technologies," he said in a video message. "I am endlessly sorry that we have disappointed this trust. I apologize in every way to our customers, to authorities and the whole public for the wrongdoing."

"We are asking, I am asking for your trust on our way forward," he said. "We will clear this up."

The VW Logo is photographed at a car at the Car Show in Frankfurt, Germany, Tuesday, Sept. 22, 2015. Volkswagen has admitted that it intentionally installed software programmed to switch engines to a cleaner mode during official emissions testing. The software then switches off again, enabling cars to drive more powerfully on the road while emitting as much as 40 times the legal pollution limit. (Michael Probst/Associated Press)

The damage to Volkswagen's reputation is reflected in the market's response. Volkswagen's share price slid a further 16.2 percent Tuesday to a near four-year low of 112 euros. The fall comes on top of Monday's 17 percent decline.

The trigger to the company's market woes was last Friday's revelation from the U.S.'s Environmental Protection Agency that VW rigged nearly half a million cars to defeat U.S. smog tests.

The company told U.S. regulators that it intentionally installed software programmed to switch engines to a cleaner mode during official emissions testing. The software then switches off again, enabling cars to drive more powerfully on the road while emitting as much as 40 times the legal pollution limit.

"In my German words: we have totally screwed up," the head of Volkswagen's U.S. division, Michael Horn, told an audience in New York on Monday.

In a statement Tuesday, Volkswagen gave more details, admitting that there were "discrepancies" related to vehicles with Type EA 189 engines and involving some 11 million vehicles worldwide. The number of vehicles involved is more than the 10 million or so cars it sold in 2014.

Volkswagen said it is "working intensely" to solve the problem and that it "does not tolerate any kind of violation of laws whatsoever."

To cover the necessary service measures and what Volkswagen says are "other efforts to win back the trust" of customers, the company said it is setting aside some 6.5 billion euros in the current quarter. There was no mention of fines or penalties in the company's statement. The EPA has indicated that it could, in theory, fine VW up to $18 billion.

The Guardian:

http://www.theguardian.com/business/2015/sep/22/vw-scandal-caused-nearly-1m-tonnes-of-extra-pollution-analysis-shows

VW scandal caused nearly 1m tonnes of extra pollution, analysis shows

Emissions could have far greater impact in Europe, where almost half passenger cars are diesel, than the US

Karl Mathiesen and Arthur Neslen

Volkswagen's rigging of emissions tests for 11m cars means they may be responsible for nearly

a million tonnes of air pollution every year, roughly the same as the UK's combined emissions for all power stations, vehicles, industry and agriculture.

The carmaker has recalled 482,000 VW and Audi brand cars in the US after the Environmental Protection Agency (EPA) found models with Type EA 189 engines had been fitted with a device designed to reduce emissions of nitrous oxides (NOx) under testing conditions.

A Guardian analysis found those US vehicles would have spewed between 10,392 and 41,571 tonnes of toxic gas into the air each year, if they had covered the average annual US mileage. If they had complied with EPA standards, they would have emitted just 1,039 tonnes of NOx each year in total.

On Tuesday the company admitted the device may have been fitted to 11 million of its vehicles worldwide. If that proves correct, VW's defective vehicles could be responsible for between 237,161 and 948,691 tonnes of NOx emissions each year, 10-40 times the pollution standard for new models in the US. Western Europe's biggest power station, Drax in the UK, emits 39,000 tonnes of NOx each year.

In the US, just 3% of passenger cars are diesel compared to almost half in the EU. Professor Martin Williams from King's College London said the US's low percentage of diesel cars meant higher diesel emissions in some cars would have a "limited effect" on air quality there.

"[In the US it would be] nowhere near the effect it would have in this country and in the rest of Europe for that matter," he said. In the UK, Williams added, emissions from diesel cars cause roughly 5,800 premature deaths each year. "If you were to make the cars emit at the legal limit you could reduce those deaths by at least a factor of two and maybe more. Maybe a factor of five."

The Clean Air in London campaign called for a royal commission to investigate carmaker's activities in the UK.

"Diesel is without doubt the biggest public health catastrophe in UK history. Even the black

plague didn't affect everyone in the population," said founder Simon Birkett.

Not all NOx emissions – which include nitrogen dioxide (NO2) and nitrogen oxide (NO) – are dangerous. But an increasing proportion of the toxic NO2 gas has been detected in EU diesel emissions. A study in the British Medical Journal in May found that short term exposure to NO2 increased the number of premature deaths from heart and lung disease by 0.88% and 1.09%.

For years, UK air pollution measurements have failed to show improvements in air quality, even as standards have tightened.

"Since 2003 scientists have been saying things are not right. It's not just the VW story, this is part of something much bigger," said Dr Gary Fuller, also of King's College. "It has a serious public health impact."

Last week, a report from NGO Transport & Environment found that Europe's testing regime was allowing nine out of every 10 new diesel vehicles to breach EU limits. Testing regimes in the EU are known to fail to pick up "real world" emissions because cars are not driven in the same way in the laboratory as on the road. Some studies suggest the discrepancy may be up to seven times the legal limit.

Williams said being able to mask their NOx emissions would also enable carmakers to pass carbon emissions tests more easily as there was a trade-off between NOx and CO2 in diesel engines.

Catherine Bearder MEP, a lead negotiator on the EU's new air quality laws, said:
"Manufacturers in the US have been caught out, but we know that pollution limits are also being breached in Europe... Unless we take action, thousands of lives will continue to be tragically cut short by air pollution."

In a sign that the emissions scandal will not remain restricted to the US, a Venice court will next month hear a case against VW and Fiat for misleading test advertising.

The Italian consumer rights group Altroconsumo is due to press its case for a class action suit against VW and Fiat on 2 October, after laboratory tests showed that fuel consumption and CO2 emissions from the VW Golf 1.6 and Fiat Panda 1.2 were up to 50% higher than claimed.

Altroconsumo wants the German car firm to pay damages of €502 (£365) to the owner of a VW Golf, in a case that raises the possibility of widescale compensation payouts by the car industry.

Monique Goyens, the director of the European consumer rights umbrella group BEUC, which includes Altroconsumo, called for an investigation by the European Commission into the use of software programmes to 'game' European emissions tests.

"The VW scandal has compounded our concern that underhand tactics are also being used in fuel consumption and CO2 testing programmes in Europe," she said. "One of the problems in the EU, unlike in the US, is the absence of a market surveillance system which would require independent in-use conformity testing. The EU needs to implement such a system to restore trust amongst consumers."

On Tuesday, the Italian government launched an investigation into VW's emissions testing regime.

VW Could Fool the EPA, But It Couldn't Trick Chemistry

Eric Niiler

FOR DECADES, AUTOMAKERS HAVE been caught between building an engine that squeezes a lot of energy out of the fuel it burns and one that has low emissions. It's not an easy tension to resolve. "Negotiating both fuel consumption and emissions is a hard tradeoff," says Anna Stefanopolou, professor of mechanical engineering at the University of Michigan.

When engineers at Volkswagen allegedly inserted a few lines of code into the diesel cars' electronic brains to circumvent emissions testing, they found a solution to this existential automotive conflict. Drivers got low emissions during the test, and high performance the rest of the time. The only problem: It's way outside of the rules. The company might have gotten away with it, too, if it hadn't been for those pesky engineers—and the basic chemistry of the diesel engine.

According to the US EPA, those lines of code hid the fact that nearly half a million diesel VWs in the US spewed up to 40 times more nitrogen oxide from their tailpipes than testing indicated. Volkswagen has now confirmed that the problem actually affects approximately 11 million diesel cars worldwide. Diesel engines use a different mix of fuel than gasoline engines and don't use spark plugs to induce combustion—relying instead on highly compressed, heated air and fuel injected as droplets. If a diesel engine doesn't get enough oxygen to combust the fuel, it'll emit all kinds of gunk—nitrogen oxides, uncombusted fuel, and particulate matter (soot, basically).

All that gunk is a big problem. Exposed to sunlight, nitrogen oxides convert to ozone—making smog. How much depends on a bunch of variables, like sunlight exposure and what happens to the hydrocarbon emissions (the uncombusted fuel), plus the temperature and local winds.

However much extra crap came from the VWs, it won't be good. Exposure to nitrogen oxide and ozone is linked to increased asthma attacks, respiratory illnesses, and in some cases premature death. Ozone also worsens existing cardiovascular and lung disease.

To deal with those emissions, "you have a whole chemical factory at the tailpipe that traps the oxides," Stefanopolou says. This bumps the sticker price for diesel cars by $5,000 to $8,000 per vehicle. (On the other hand, diesels get better mileage, especially in highway driving.)

For years, diesel trucks and buses were the biggest polluters on the highway. But carmakers adapted a relatively new technology called selective catalytic reduction—the same tech that

scrubs pollutants from factory smokestacks—to the tailpipe of the diesel engine.

Here's how it works: Inside a honeycombed chamber, the scrubbing system sprays a liquid made of 30 percent urea and 70 percent water into the diesel exhaust. This sets off a chemical reaction that converts nitrogen oxides into nitrogen, oxygen, water and small amounts of carbon dioxide—molecules that aren't as harmful to human health. Catalytic scrubbing was supposed to cut diesel NOx emissions up to 90 percent, according to the Diesel Technology Forum, an industry group based outside Washington. That made diesel engines clean enough to use in passenger cars, which have stricter emissions rules.

The scrubbing chemistry is also what gave away Volkswagen's alleged cover-up. In 2013, a small non-profit group decided to compare diesel emissions from European cars, which are notoriously high, with the US versions of the same vehicles. A team led by Drew Kodjak, executive director of the International Council on Clean Transportation, worked with emissions researchers at West Virginia University to test three four-cylinder 2.0-liter diesel cars in the Los Angeles area: a Jetta, a Passat, and a BMW. Only the BMW passed.

"We felt that it would be possible to get low emissions for diesels," Kodjak said. "You can imagine our surprise when we found two of the three vehicles had significant emissions."

The ICCT reported its findings to the EPA and the California Air Resources Board. Regulators met with VW officials in 2014 and the automaker agreed to fix the problem with a voluntary recall. But in July 2015, CARB did some follow up testing and again the cars failed—the scrubber technology was present, but off most of the time.

How this happened is pretty neat. Michigan's Stefanopolou says computer sensors monitored the steering column. Under normal driving conditions, the column oscillates as the driver negotiates turns. But during emissions testing, the wheels of the car move, but the steering wheel doesn't. That seems to have have been the signal for the "defeat device" to turn the catalytic scrubber up to full power, allowing the car to pass the test.

Stefanopolou believes the emissions testing trick that VW used probably isn't widespread in the automotive industry. Carmakers just don't have many diesels on the road. And now that number may go down even more.

How Engineers at West Virginia University Caught VW Cheating

By Philip E. Ross

Volkswagen, which had just become the biggest-selling automaker in the world, has now been nabbed committing perhaps the biggest corporate cybercrime of all time.

Its diesel cars were found to have cheated systematically on emissions tests run by the United States Environmental Protection Agency (EPA) over the past seven years. When the control system sensed that a test was under way, it would order the engine to ix-nay on the ox-nay—NOx that is, or nitrous oxides—long the bugbear of diesel engines. Later, when the coast was clear, the system would let the NOx pour out at up to 40 times the allowed levels in order to optimize fuel economy.

This dirty trick allowed for a clean getaway for some 482,000 cars under the VW and Audi brand names, including the VW Jetta and the Audi A3. The EPA found out, VW admitted wrongdoing, and it stopped selling the offending vehicles. Its shares lost more than 0ne-fifth of their value in the early hours of the next trading day.

But the guys who found the clues to the crime say they weren't looking for trouble—they were just working under contract to a clean-transportation group that wanted to convince European regulators to adopt stricter emissions standards, as the United States has done.

"We had no cause for suspicion; we thought the vehicles would be clean," John German, of the

International Council on Clean Transportation, told Bloomberg news.

The ICCT subcontracted the testing to the University of West Virginia's Center for Alternative Fuels, Engines and Emissions (CAFEE). Its engineers compared emissions measured on a road trip to results from the same cars that their colleagues were getting in the lab. The discrepancies were great.

Dan Corder, head of WVU's Center for Alternative Fuels, Engines, and Emissions (CAFEE)

Some people have mischaracterized what our role was," says Dan Corder, who heads up CAFEE. "Some have used the phrase 'tipped off the EPA.' We didn't."

The engineers from CAFEE reported on these preliminary results in spring of 2014 at the Coordinating Research Council's Real-World Emissions Workshop, which was held in San Diego that year. Corder hastens to add that the results, based as they were on a handful of cars, were preliminary and that they researchers drew no conclusions. According to Corder:

We said, these are two vehicles. We're presenting what we can present. EPA people were in the audience. And the ICCT publicized the results on its website, then delivered them to the EU's Joint Research Center.

Volkswagen Says 11 Million Cars Worldwide Are Affected in Diesel Deception

By JACK EWING SEPT. 22, 2015

FRANKFURT — A scandal that has undermined Volkswagen in the United States spread to its core market of Europe on Tuesday, after the company said that 11 million of its diesel cars worldwide were equipped with software that was used to cheat on emissions tests.

Volkswagen did not provide information on where the affected cars are, but the overwhelming majority are probably in Europe, where the company dominates the market and accounts for more than one of every four cars sold.

The German automaker said it was setting aside the equivalent of half a year's profits — 6.5 billion euros, or about $7.3 billion — to cover the cost of fixing the cars to comply with pollution standards and to cover other expenses, which are likely to include fines as well as responses to civil lawsuits from angry customers.

The carmaker's statement was its first admission that diesel cars outside the United States may contain the software that led the Environmental Protection Agency to accuse the company of deliberately evading pollution tests. Previously, Volkswagen had acknowledged only that the problem affected about 500,000 vehicles in the United States.

The tampered vehicles use what is known as Type EA 189 engines, which are 2-liter engines. The company said on Tuesday that "a noticeable deviation between bench-test results and actual road use was established" for the engines.

Volkswagen said it would also make "other efforts to win back the trust of our customers."

The number of cars involved suggests that the scale of the damage to Volkswagen's reputation and its financial standing may be even greater than thought.

Volkswagen shares fell by nearly 18 percent through late-afternoon trading in Frankfurt on Tuesday, after falling by 16 percent on Monday.

The diesel cars were programmed to sense when emissions were being tested and to turn on equipment that reduced emissions, according to United States officials. At other times, the cars had better fuel economy and performance, but produced as much as 40 times the allowed amount of nitrogen oxide, a pollutant that can contribute to respiratory problems including asthma, bronchitis and emphysema.

"Volkswagen is working intensely to eliminate these deviations through technical measures," the company said.

It is not clear, though, how fully Volkswagen might be able to correct the problem on the 11 million vehicles. The company could presumably alter the engines, so that the cars on the road begin actually meeting the required emissions standards. But doing so would probably degrade the vehicles' fuel economy and performance, and might cause the engines to wear out sooner.

The E.P.A. has ordered Volkswagen to recall almost a half-million vehicles sold in the United States from 2009 to 2015. The affected Golf, Passat, Jetta and Beetle cars were equipped with 2-liter diesel engines. Some Audi models also use the same diesel engine.

Volkswagen has halted sales of cars with the engines in the United States.

Volkswagen CEO's days appear numbered as emissions crisis deepens

BERLIN | BY ANDREAS CREMER

Martin Winterkorn's days as head of Volkswagen AG appeared numbered on Tuesday after the German carmaker said a scandal over falsified vehicle emission tests in the United States could affect 11 million of its cars worldwide.

The Tagesspiegel newspaper, citing unidentified sources on Volkswagen's supervisory board, said the board would decide on Friday to replace Winterkorn with Matthias Mueller, the head of the automaker's Porsche sports car business.

A Volkswagen spokesman denied the report. The company later said it would post a video statement by Winterkorn at 1500 GMT. A spokesman for Porsche said Mueller was attending a Volkswagen board meeting at its headquarters in Wolfsburg.

A key Winterkorn ally withheld public support for the under-fire chief executive on Tuesday.

"I don't want to preempt the upcoming intense deliberations and will not comment on details or any consequences," Stephan Weil, head of the German state of Lower Saxony, told reporters in Hanover when asked about Winterkorn's future.

Weil, a supervisory board member representing Volkswagen's second-largest shareholder, earlier this year helped Winterkorn to see off a challenge to his leadership by long-time chairman Ferdinand Piech.

Shares in Europe's biggest carmaker plunged almost 20 percent on Monday after it admitted using software that deceived U.S. regulators measuring toxic emissions in some of its diesel cars.

The stock tumbled another 20 percent to a four-year low on Tuesday after some countries in Europe and Asia said they would launch investigations themselves.

Volkswagen said it would set aside 6.5 billion euros ($7.3 billion) in its third-quarter accounts to help cover the costs of the biggest scandal in its 78-year-history, blowing a hole in analysts' profit forecasts.

It also warned that sum could rise, adding diesel cars with so-called Type EA 189 engines built into about 11 million Volkswagen models worldwide had shown a "noticeable deviation" in emission levels between testing and road use.

Volkswagen sold 10.1 million cars in the whole of 2014.

The U.S. Environmental Protection Agency (EPA) said on Friday Volkswagen could face penalties of up to $18 billion for cheating emissions tests. The carmaker also faces lawsuits and damage to its reputation that could hit sales, while media reports have said the U.S. Department of Justice has opened a criminal inquiry into the matter.

The crisis has sent shockwaves through Germany, with Chancellor Angela Merkel calling for "complete transparency" from a company long seen as a beacon of the country's engineering excellence, and newspapers putting the blame squarely on Winterkorn.

The 68-year-old was due to have his contract extended at a supervisory board meeting on Friday, but is now facing questions over why the scandal wasn't averted.

Volkswagen, which for several years has been airing U.S. TV commercials lauding its "clean diesel" cars, was challenged by authorities as far back as 2014 over tests showing emissions exceeded California state and U.S. federal limits.

The company attributed the excess emissions to "various technical issues" and "unexpected" real-world conditions.

It wasn't until the EPA and the California Air Resources Board threatened to withhold certification for its 2016 diesel models that Volkswagen in early September admitted its wrongdoing.

"Winterkorn either knew of proceedings in the U.S. or it was not reported to him," Evercore ISI analyst Arndt Ellinghorst said. "In the first instance, he must step down immediately. In the second, one needs to ask why such a far-reaching violation was not reported to the top and then things will get tough too."

Porsche's Mueller was promoted to Volkswagen's executive board on March 1 and was previously its head product strategist. As a management board member of family-owned Porsche SE, he is also close to the Porsche-Piech clan that has a controlling shareholding in Volkswagen.

"TOTALLY SCREWED UP"

Winterkorn has built Volkswagen into a global powerhouse since he took the helm in 2007, with brands ranging from budget Seats and Skodas to premium Audis and top-end Porsches and Lamborghinis.

But he has also faced criticism for a centralized management style which some analysts say has hampered the company's efforts to address long-standing underperformance in North America.

Workers in Wolfsburg, where Volkswagen employs over 50,000 people, were dismayed by the damage to the company's image. "If Winterkorn knew of the manipulation, then he must go," said one staffer who works at the plant's human resources department.

LA Times:

http://www.latimes.com/business/autos/la-fi-vw-subsidies-20150922-story.html

U.S. taxpayers duped into shelling out $51 million in green subsidies for 'clean' VW vehicles

By JERRY HIRSCH

The federal government paid out as much as $51 million in green car subsidies for Volkswagen diesel vehicles based on falsified pollution test results, according to a Times analysis of the federal incentives.

On Friday, federal and state regulators said the German automaker used software in 482,000 of its diesel vehicles since the 2009 model year to cheat on U.S. emissions tests. Environmental Protection Agency officials said Monday that the U.S. Department of Justice is also investigating.

The Times analysis matched Internal Revenue Service data with Volkswagen sales figures to determine the value of subsidies VW diesel buyers were eligible to collect in 2009, the first and only year the vehicles qualified. The $1,300 tax credit would have been available to buyers of about 39,500 Jetta and Jetta Sportwagen models that sold that year, according to Motor Intelligence, an industry research firm.

"It is really unfortunate," said Luke Tonachel, director of clean vehicles and fuels project at the Natural Resources Defense Council. "The government has been effective to help advance clean technologies, but it is a waste of taxpayer dollars when they aren't actually helping to clean the environment."

He said regulators should factor in the $51 million in subsidies when determining penalties for Volkswagen's Clean Air Act violations.

Such green car incentives have also gone to buyers of hybrid, electric and hydrogen fuel cell cars. But the EPA does not track aggregate figures for incentives paid out to buyers of specific models or brands.

The Volkswagen diesels qualified for the federal incentives in the same year the automaker first installed the software trick it used to cheat on emissions tests. The so-called defeat device employed an algorithm that automatically detects when the vehicle is undergoing pollution tests and changes the way the engine performs.

The algorithm senses whether the car is in a testing environment by analyzing a variety of data — steering position, speed, duration of engine operation and barometric pressure.

Away from the laboratory, during everyday driving, the cars emit up to 40 times the legally allowed amount of nitrogen oxide, environmental officials said.

The Environmental Protection Agency and the California Air Resources Board discovered the software. The EPA said Monday it will coordinate with federal prosecutors on further enforcement and penalties.

How Volkswagen cheated on emissions rules

Autos editor Brian Thevenot explains how Volkswagen used a software trick to hide illegal pollution levels in half a million diesel cars.

"Determinations regarding potential penalties and other remedies will be assessed as part of the investigation EPA has opened in conjunction with the U.S. Department of Justice," said EPA spokeswoman Liz Purchia.

The Justice Department has lately taken on a leading role in major investigations of automakers, usually leveraging the threat of criminal charges to exact huge fines.

Last week, General Motors agreed to pay a $900-million fine to settle an investigation into why it did not promptly recall cars with a defective ignition switch that has led to crashes causing 124 deaths. Last year Toyota signed a $1.2-billion settlement and admitted to deceiving regulators about deadly safety defects that allegedly caused unintended sudden-acceleration incidents.

No individuals were charged in the GM and Toyota probes.

"This might be the perfect case for Department of Justice to come down on the criminal side against individuals and not just the company," said Carl Tobias, a University of Richmond law professor. "Someone had to do the computer programming. Someone had to OK this, and all in what is known as an autocratic, top-down company."

The German automaker admitted installing the software after it was confronted by regulators. In a statement Sunday, VW Chief Executive Martin Winterkorn said, "I personally am deeply sorry that we have broken the trust of our customers and the public."

Winterkorn said the automaker "will cooperate fully with the responsible agencies, with transparency and urgency, to clearly, openly and completely establish all of the facts of this case."

He said VW has also ordered an external investigation into the matter, pledging to "do everything necessary in order to reverse the damage this has caused."

Volkswagen declined to comment on the Times analysis of its revenue from the federal Alternative Motor Vehicle Credit.

Volkswagen shares fell $33.89, or 18.5%, to close Monday at $149.68.

See the most-read stories this hour >>

This was the second time Volkswagen has been charged with using devices to evade U.S. emission-control rules.

In 1974, the automaker paid a $120,000 fine to settle EPA charges that it gamed pollution control systems in four models by changing carburetor settings and shutting off an emissions-control system at low temperatures. VW didn't admit guilt but pledged management changes to ensure future compliance with EPA regulations.

This time the monetary damage could be much greater.

The automaker will have to recall all the vehicles and modify the emissions systems at its own expense, regulators said. Additionally it could face a fine of as much as $18 billion, or $37,500 per car. And for now it has suspended sales of thousands of new and used diesel models sitting on dealer lots — cars that are depreciating rapidly while the automaker develops a fix for the emissions system.

The affected diesel models are Jetta (model years 2009-15), Beetle (2009-15), Audi A3 (2009-15), Golf (2009-15) and Passat (2012-15).

Volkswagen also will face civil lawsuits on two fronts, including consumer fraud cases and class-action litigation for what is called a "diminished value" lawsuit. The vehicles are likely to lose some of their resale value because of the problem.

The Volkswagen case breaks new ground for how corporations can make "end runs" around legal requirements, said Ryan Calo, a University of Washington professor and expert in robotics and autonomous systems law and policy.

A company, for example, might learn of an inspection at a construction site and then make sure that workers wear helmets or it might clean a food plant thoroughly before a scheduled review even if it doesn't operate that way all the time.

"But this is encoded," Calo said. "I bet that it happens elsewhere but it is rare we detect it because we typically don't go through the code. There could be many examples in everyday things."

The VW issue demonstrates why regulators need more technical expertise, including a federal robotics commission, he said.

"We need experts in a centralized place whether the issues are drones, driverless cars or things like the VW example," Calo said.

EPA is 'Upping its Game' After Volkswagen Allegations

Top administrator is pleased with auto maker's 'aggressive stance' on tackling problem

By JEFFREY SPARSHOTT

Sept. 22, 2015 9:42 a.m. ET

WASHINGTON—The top official at the Environmental Protection Agency said the agency is "upping its game" in the search for possible violations of U.S. pollution rules following allegations that Volkswagen AG circumvented emissions standards.

"We are not going to sit around and worry about whether others have it, we are going to find it," Gina McCarthy said at a Wall Street Journal breakfast Tuesday. "Right now, we are upping our game in terms of going out and doing work to take a look at what we need to do with other vehicles."

The EPA last week accused Volkswagen of dodging air-pollution rules on nearly half a million cars sold in the U.S. The German company has since halted American sales of the diesel-powered cars at issue and apologized for violating customers' trust.

Volkswagen allegedly used software, dubbed a "defeat device," in the cars to make diesel-powered engines appear to have lower levels of emissions than they actually did. About 482,000 Volkswagen diesel-powered cars sold in the U.S. since 2008 were affected.

Ms. McCarthy said the alleged violation was difficult to detect, but she is "pleased Volkswagen is taking such an aggressive stance on admitting the problem and attacking it."

"I think we have to be concerned whether there are other defeat devices out there that we have not been able to detect," she said. But the auto industry is well aware of the pollution rules and has been working to comply.

"I think it will be very difficult for Volkswagen at this point to be looked at as nothing other than an outlier," Ms. McCarthy said.

Detroit Free Press:

http://www.freep.com/story/news/2015/09/21/us-house-panel-hold-hearing-vw/72583066/

Congress to hold hearing on VW air emissions violation

Todd Spangler and Nathan Bomey, Detroit Free Press and USA Today 8:15 p.m. EDT September 21, 2015

WASHINGTON — Congressional investigators will hold a hearing in the coming weeks to take testimony on allegations raised by the U.S. Environmental Protection Agency that Volkswagen sold hundreds of thousands of diesel-powered vehicles with software to get around air emission limits.

U.S. Rep. Fred Upton, who chairs the House Energy and Commerce Committee, said Monday that the committee's Oversight and Investigations Subcommittee will look into the EPA's allegations, which were first raised Friday. VW's stock value plunged Monday in the aftermath of the revelations, which could affect some 500,000 vehicles and potentially result in fines totaling as much as $18 billion.

Volkswagen's CEO said he was "deeply sorry" for violating U.S. emissions standards and on Sunday ordered an external investigation, two days after the EPA accused the automaker of purposefully manipulating emissions tests for almost 500,000 vehicles.

The German automaker ordered its U.S. dealerships to stop selling cars impacted by the probe until its engineers can deliver a fix.

A date was not set for the congressional hearing but Energy and Commerce staff said it would come within the next several weeks.

“Strong emissions standards are in place for the benefit of public health," Upton, R-St. Joseph, and subcommittee Chairman Tim Murphy, R-Pa., said in a joint statement. “We will follow the

facts. We are ... concerned that auto consumers may have been deceived — that what they were purchasing did not come as advertised."

As the Free Press reported Friday, the EPA and the state of California accused VW of violating the Clean Air Act by using software in some 482,000 diesel-powered vehicles that could detect when the car was undergoing official emissions testing and turn full emissions controls on only during the test. The effectiveness of pollution control equipment was reduced otherwise.

EPA's violation notice covered model year 2009-15 Jettas, Beetles, Audi A3s and Golfs and model year 2014-15 Passats.

As a result, Volkswagen had a hand in potentially exposing people to harmful pollutants at levels 40 times the acceptable standard and that could exacerbate respiratory conditions such as asthma, the EPA charges.

"I personally am deeply sorry that we have broken the trust of our customers and the public," Martin Winterkorn, Volkswagen's CEO, said in a statement. "We will cooperate fully with the responsible agencies, with transparency and urgency, to clearly, openly and completely establish all of the facts of this case."

"We do not and will not tolerate violations of any kind of our internal rules or of the law," Winterkorn said. The company's board takes the allegations "very seriously," he said.

The violations could expose Volkswagen — the world's largest vehicle manufacturer through the first six months of 2015 — to up to $18 billion in federal fines if the EPA assesses the maximum possible penalty of $37,500 per vehicle.

The violations could invite charges of false marketing by regulators, a vehicle recall and payment to car owners, either voluntarily or through lawsuits. Volkswagen advertised the cars under the "Clean Diesel" moniker.

The state of California is investigating the emissions violations.

The EPA accused the German automaker of adopting what it called a "defeat device" to trick U.S. regulators into believing its cars met Clean Air Act standards for nitrogen oxides. Volkswagen admitted to investigators it had installed the defeat device, the EPA said.

Volkswagen told dealers they cannot sell the 4-cylinder diesel versions of those cars until a fix is available, Volkswagen spokesman Mario Guerreiro said Sunday.

The sales halt could put a significant dent in the company's September sales performance. About 20% of Volkswagen's vehicle sales are diesel engines, said AutoPacific analyst Dave Sullivan.

"It totally goes against all of the marketing they have had of a clean diesel," Sullivan said of the violations. "That's one of the biggest selling points for Volkswagen."

"The trust of our customers and the public is and continues to be our most important asset," Winterkorn said Sunday. "We at Volkswagen will do everything that must be done in order to re-establish the trust that so many people have placed in us, and we will do everything necessary in order to reverse the damage this has caused. This matter has first priority for me, personally, and for our entire Board of Management."

Chicago Tribune:

http://www.chicagotribune.com/business/ct-volkswagen-owners-0921-biz-20150921-story.html

Volkswagen owners should be nervous about emissions scandal, experts say

Becky Yerak and Gregory Karp

Volkswagen hit with class-action suit over emissions cheating.

Automobile recalls, even huge, highly publicized ones, typically don't hurt new or used car sales, but the Volkswagen scandal involving tricking emissions testers is different and could be cause for worry among VW diesel vehicle owners, experts say.

At least one class-action lawsuit has already been filed on behalf of Volkswagen and Audi owners. It claims fraud and breach of contract, citing the "diminished value" of the nearly 500,000 recalled diesel vehicles, which usually sell for a premium price over their gasoline counterparts. Specifically, after recalled Volkswagen diesels are fixed, the cars might have degraded horsepower and fuel efficiency, the suit says.

The EPA says Volkswagen violated the federal Clean Air Act by installing "defeat devices" — software programmed to switch engines to a cleaner mode during official emissions testing. The software then switches off again, enabling cars to emit as much as 40 times the legal limit of pollutants during normal driving.

Volkswagen marketed the diesel-powered cars as being better for the environment. The affected diesel cars, according to the EPA's letter to Volkswagen on Friday, include: Jetta, 2009 to 2015; Jetta SportWagen TDI, 2009 to 2014; Beetle, 2012 to 2015; Beetle Convertible, 2013 to 2015; Audi A3, 2010 to 2015; Golf, 2010 to 2015; Golf SportWagen TDI, 2015; and Passat, 2012 to 2015.

Consumer Reports called the Volkswagen scandal "outrageous" and a violation of law.

"Volkswagen was ripping off the consumer and hurting the environment at the same time," said Ellen Bloom, senior director of federal policy for Consumers Union, the policy and advocacy arm of Consumer Reports.

The EPA has ordered VW to fix the cars at its own expense but said car owners do not need to take any immediate action. The EPA insisted that the violations do not pose any safety hazard and said cars on the road remain legal to drive. Volkswagen has ordered a stop to sales of new

and used TDI cars in stock.

The EPA said, however, that the cars pose a threat to public health. The agency said the carmaker could be fined more than $18 billion.

The automaker is also part of a criminal probe by the U.S. Justice Department, unnamed sources told The Associated Press and Bloomberg News.

In the Chicago region, Volkswagen dealerships were not responding to inquiries Monday, except one that said it hadn't heard from any consumers about the issue and expressed confidence the problem would be taken care of.

For consumers, whether diesel Volkswagens from seven model years will really have less value is an open question.

During recent high-profile recalls by GM, Toyota and Honda, there has been very little, if any, impact on sales, said officials from Kelley Blue Book, Black Book and Edmunds.

"With so many recalls in the news, they easily become white noise for a lot of consumers, and they don't appear to have much of an influence on shopping decisions," according to Edmunds.com.

Even when there's intense media coverage, the impact on resale value is "fleeting," as with the Toyota recall for accelerators that would stick, said Eric Ibara, a senior analyst with Kelley Blue Book. "It lasted for maybe six or eight months, and their resale values popped back to where they normally were.

Still, the Volkswagen recall is different.

First, it doesn't involve a safety issue but more a breach of public trust. "The impact on that could be longer-lasting," Ibara said. "Our concern is their image is tarnished ... I imagine if you own a Volkswagen, you're reading the coverage of what they've done."

Indeed, when a car is recalled for a safety reason, the recall could actually improve goodwill with the customer, said Anil Goyal, vice president of Automotive Valuation and Analytics for Black Book.

Another concern for current owners is how the resale values will react when Volkswagen eventually restarts selling the diesel models now sitting idle on lots after it stopped selling. "If they show up with higher incentive levels, that certainly impacts the used-car values," Ibara said.

In other words, if VW chooses to get rid of that inventory by offering great incentives and significantly lowering diesel car prices, demand for used cars would drop along with their prices.

Volkswagen offers some of the least expensive diesel models and in recent years had been a market leader in that segment of the vehicle market, said John Voelcker, editor of GreenCarReports.com. "Diesels in this country have mostly been confined to trucks," Voelcker said. "VW was the only volume maker of diesel cars."

According to Edmunds, VW and Audi account for 17 of 44 vehicle models that offer diesel engines, or 39 percent.

Diesel vehicles fetch a premium price both in the new and used markets. The premium price paid by new-car buyers for the diesel version of the recalled cars varies from $1,000 to almost $7,000, according to list prices.

In a quick analysis by Swapalease.com, a 3-year-old base model Volkswagen Golf using gasoline sold for 51 percent of its original value, while a diesel sold for 57 percent, said Scot Hall, executive vice president of operations for Swapalease.com. "That's a significant difference," he said.

It's an open question whether the VW diesels, which have TDI as part of the name for turbocharged direct injection, will retain the premium over their gasoline counterparts, Ibara said. "It would not surprise me if they drop a little bit, but I do not expect the premium to entirely disappear."

What fix Volkswagen will employ is unclear, whether it's a software solution or some physical repair or retrofit. It may just restate the fuel economy to be lower on diesels — maybe 3 to 5 mpg — and then be faced with offering some compensation to owners, Ibara said.

So far, it's difficult to say for sure that a fix would hurt the vehicle's fuel mileage, performance or reliability. But some current owners are expecting that, Hall said.

Hall said there's talk that some Volkswagen owners would avoid the fix because they prefer more power, better performance and greater fuel economy and care less about the emissions.

Consumer Reports said that, as a result of the scandal, it has suspended its "recommended" rating of two VW vehicles, the Jetta diesel and Passat diesel, until it can retest the cars with the recall repair performed. It said it will also assess whether the repair hurts performance or fuel economy.

The potential downgrade in performance was also mentioned in the class-action lawsuit,

filed on behalf of David Fiol, a California resident and 2012 VW Jetta SportWagen TDI owner. He seeks class-action status both nationally and in California, for unspecified punitive damages and legal fees, among other things.

Fiol, in his lawsuit, mentions "future additional fuel costs" and the "diminished value" of his vehicle, despite the recall.

Volkswagen won't be able to make the vehicles "comply with emissions standards without substantially degrading their performance characteristics, including their horsepower and their efficiency," the lawsuit said. "As a result, even if Volkswagen is able to make" plaintiffs' vehicles EPA compliant, the owners "will nonetheless suffer actual harm and damages because their vehicles will no longer perform as they did when purchased and as advertised."

Volkswagen didn't immediately respond to a request for comment about the lawsuit, filed last Friday by Seattle law firm Hagens Berman Sobol Shapiro in a U.S. District Court in the Northern District of California.

In Illinois, diesel vehicles like the VWs in question don't require emissions inspections like gasoline models, so the flap won't affect owners in that way, according to a spokeswoman for the Illinois Environmental Protection Agency.

It Took E.P.A. Pressure to Get VW to Admit Fault

By BILL VLASIC and AARON M. KESSLER SEPT. 21, 2015

Volkswagen executives told environmental regulators for more than a year that discrepancies between pollution tests on its diesel cars and the starkly higher levels out on the road were a technical error, not a deliberate attempt to deceive Washington officials.

But this month, the executives made a startling admission: The diesel vehicles it sold in the United States used software meant to cheat on the tests.

VW made the admission only when the Environmental Protection Agency took the extraordinary action of threatening to withhold approval for the company's 2016 Volkswagen and Audi diesel models, according to letters sent to company officials by the E.P.A. and California regulators.

Since that deception became public on Friday, Volkswagen has scrambled to conduct damage control. The chief executive apologized and the company said it would stop selling diesel-powered cars from the 2015 and 2016 model years.

All this was possible because environmental regulators had tools and powers at their disposal that another area of enforcement — auto safety regulation — does not have, despite the efforts of lawmakers, consumer advocates and, more recently, auto safety regulators themselves. Often, the auto industry has beaten back more stringent laws.

The National Highway Traffic Safety Administration, for example, can impose a maximum penalty of $35 million on an automaker that flouts safety regulations — a relatively low sum for a company like General Motors, which last year paid such a fine for a defect that has now been linked to at least 124 deaths.

By contrast, under the Clean Air Act, Volkswagen, the world's largest automaker, could be fined as much as $37,500 for each recalled vehicle, for a possible total penalty of as much as $18 billion.

"The Clean Air Act statutory scheme gives E.P.A. more power and flexibility to move more quickly than N.H.T.S.A.," said Carl Tobias, a law professor at the University of Richmond, who has studied the government's response to auto safety issues. "E.P.A. also seems more tough-

minded and savvy about how to be effective in this arena."

Still, the time it takes to investigate auto companies is often extensive, and getting the facts can be a challenge. "Even E.P.A. took a year to finally crack this case open," he said.

Beyond the E.P.A., the government has other tools at its disposal when it comes to enforcing environmental regulation.

As G.M. did, Volkswagen now faces a criminal investigation by the Justice Department, according to a person briefed on the inquiry. It is being conducted, though, by the department's Environment and Natural Resources Division, which is devoted to violations of environmental law. "Nearly one-half of the division's lawyers bring cases against those who violate the nation's civil and criminal pollution-control laws," the department's website says.

And on Monday, a subcommittee of the House Energy and Commerce Committee said it would hold a hearing on the issue.

It's only part of the pressure being applied to Volkswagen. An official with the Environmental Protection Agency said that discussions are continuing with Volkswagen, as the company grapples with how to handle a recall of the affected vehicles.

"We still have many questions for the company," said Christopher Grundler, head of the agency's transportation office. "It's the responsibility of Volkswagen and Audi to prepare a remedy for these vehicles."

There is no timetable for Volkswagen to submit a comprehensive plan to recall and fix the affected vehicles. But government officials are urging the company to take action quickly — both on developing a fix for the cars and starting a campaign to educate consumers on the problem.

"This does not happen immediately," Mr. Grundler said. "And we've been trying to be clear with the consumers that their vehicles are safe and they don't have to do anything right now." The assessment of fines for the violations will also not happen immediately. "That is down the road," he said.

"But we feel a sense of urgency to address the emissions of these vehicles that are already on the road."

A Volkswagen spokesman, John Schilling, said the automaker was "committed to fixing this issue as soon as possible" and to developing "a remedy that meets emissions standards and satisfies our loyal and valued customers."

Even with the looming punishment, the company almost got away with it. In fact, it most likely would have if not for a strange twist of fate and the curiosity of several auto researchers.

Two years ago, the International Council on Clean Transportation, a nonprofit environmental group staffed by a number of former E.P.A. officials, had been testing the real-world performance of so-called clean diesel cars in Europe, and were less than impressed with the emissions results.

The group decided it would test diesel-powered cars in the United States, where regulations were much more strict, as a way of almost shaming the European automakers to tighten their compliance. The group fully expected the American cars to do well, and run cleaner than their counterparts across the pond.

What they could not have foreseen was that they would stumble onto one of the biggest frauds in recent automotive history.

Further, on the campus of West Virginia University, a group of emissions researchers who mainly dealt with heavy trucks noticed an unusual posting by the transportation council, which was looking for a partner to test diesel-powered cars.

"No one had done that before in the U.S.," said Arvind Thiruvengadam, a professor at the university. "It sounded very interesting, to test light-duty diesel vehicles in real-world conditions. We looked around at each other said, 'Let's do it.' "

The university's team bid on the project and got the contract. Mr. Thiruvengadam and his colleagues never envisioned where it would lead. "We certainly didn't have an aim of catching a manufacturer cheating," he said. "It didn't even cross our minds."

The study also did not target Volkswagen specifically. It was something of a fluke, he said, that two out of three diesel vehicles bought for the testing were VWs.

It did not take long for suspicions to set in. The West Virginia researchers were well-versed in diesel performance on real roads, and had certain expectations for how the test cars should ebb and flow in their emissions. But the two Volkswagens behaved strangely.

"If you're idling in traffic for three hours in L.A. traffic, we know a car is not in its sweet spot for good emissions results," Mr. Thiruvengadam said. "But when you're going at highway speed at 70 miles an hour, everything should really work properly. The emissions should come down. But the Volkswagens didn't come down."

Even then, however, it is difficult for most researchers to be sure exactly what is going on. There are so many factors involved in real-world driving — speed, temperature, topography, braking habits. It is not unheard-of for cars to perform much differently in on-the-road tests than one expected.

But this time there was a key difference: The California Air Resources Board heard about the groups' tests and signed on to participate. The regulators tested the same vehicles in their specially equipped lab used to judge cars' compliance with state emissions standards. That gave the project what most studies lacked: a baseline.

"That broke loose everything," Mr. Thiruvengadam said.

In the lab, the two VWs performed flawlessly. But when they were taken out on the roads in California, they were belching out levels of nitrogen oxide that were 30 to 40 times higher than the regulatory standards. Even the heavy-duty trucks the researchers had tested had never performed that poorly by comparison.

"It just didn't make sense," said John German, one of the leaders on the project at the transportation council. "That was the real red flag for us."

Volkswagen Credit Spreads Soar After EPA Charges Co. With Evading Pollution Controls

John Atkins, CONTRIBUTOR

Credit spreads referencing German automaker Volkswagen widened sharply today after the U.S. Environmental Protection Agency on Friday charged the company with evading government pollution controls through software designed to allow diesel models to meet clean-air standards, but only during official emissions testing. The government demand for recalls affects roughly 500,000 vehicles.

Volkswagen five-year CDS costs increased 80% today, rising 60 bps to the 135 bps area, or a high since 2012, trade data show. The 2.45% notes due Nov. 20, 2019 issued by subsidiary Volkswagen Group of America Finance last November, at T+85, changed hands today as much as 77 bps wider on the session, reaching at G-spread equivalents as wide as T+180, according to MarketAxess.

Credit analysts today noted the significant potential risks to VW's credit standing and reputation. "VW's operating margins have lagged peers (BMW, Daimler) for some time, and the automaker has cited encouraging U.S. vehicle sales in the context of its 2015 revenue and profit outlook," stated FTN Financial senior credit strategist Benjamin Millard in a credit note.

While it acknowledged uncertainties regarding the impact of the scandal on Volkswagen's brand image and reputation – and terming the development a "crisis" for VW – Fitch today said the scandal is unlikely to trigger an immediate downgrade of Volkswagen's A rating, even though Volkswagen reportedly faces a maximum penalty of $18 billion as well as any costs related to a recall effort.

"We believe the fine is unlikely to amount to the theoretical maximum amount of USD37,500 per car, although there have been only very few precedents of such cases and associated fines. In addition, the group's financial structure is sound and its free cash flow (FCF) generation extremely robust," Fitch stated today.

The outlooks on the respective A/A2 ratings at S&P and Moody's are currently stable, through S&P warned as recently as Sept. 7 that stricter carbon rules were fueling high capital spending demands on Europe's carmakers.

The Volkswagen Diesel Emissions Scandal, By the Numbers

Ethan Wolff-Mann @ewolffmann Sept. 21, 2015

VW is accused of faking pollution tests on a grand scale.

Last week, the EPA accused Volkswagen of deliberately falsifying tests of its diesel engine cars so that the vehicles would pass anti-pollution standards. A massive recall of nearly half a million Volkswagen diesel cars was ordered, causing a major stir in the industry—and especially among VW owners who had been drawn to the vehicles because of the automaker's "clean diesel" claims.

Let's look at the situation by the numbers.

482,000 Diesel cars affected, which include TDI Jettas, Beetles, Golfs, and Audi A3s from 2009-15 and Passats from 2014-15.

$37,500 Fine per vehicle that the German automaker could face in the U.S.

$18 billion Possible total penalties faced by Volkswagen, and that figure doesn't include fixing the recalled cars.

40 Times over the legal limit of certain types of pollution emitted by the vehicles, including nitrogen oxide—which can cause respiratory problems.

$6,855 Premium that buyers were paying for Passat TDI cars over standard gasoline versions.

-20% The hit Volkswagen stock has taken since the scandal.

12 Number of months Volkswagen has been denying cheating on the emissions test.

2017 When Volkswagen may sell diesel cars again in the U.S., now that sales have been halted.

2.0 Liter 4-cylinder engines affected. Larger diesel engines used in SUVs don't have the software at the center of the controversy.

$0 Current resale value of affected cars in California, because the cars were sold as "non-compliant" (and therefore cannot be resold).

14.28% Of affected cars that are registered in California

23 Percentage of Volkwagens sold in August that were diesels.

VW's diesel sales frozen until compliance is proven, EPA official says

Fix must be approved before recall can begin

Chris Grundler: "It will take more work to determine what the appropriate remedy for these vehicles is."

By Ryan Beene

WASHINGTON -- With its diesel car lineup grounded by an emissions-test cheating scandal, Volkswagen now bears the burden of proving that these vehicles comply with federal emissions standards, the EPA's top auto regulator said.

Until then, said Chris Grundler, director of the EPA's Office of Transportation Air Quality, no sales.

Meanwhile, Grundler said, the EPA and California regulators are now probing all light-duty diesel vehicles in the U.S. market from all manufacturers to check for illegal software designed to fool U.S. emissions tests.

U.S. regulators accused VW on Friday of violating the Clean Air Act by selling 482,000 diesel-powered vehicles with such illegal software. The agency said the company admitted to fitting seven model years' worth of diesel cars with the softwared -- termed a "defeat device" -- that would activate the cars' emission controls during testing, but deactivate them in real-world driving.

In order to be able to resume sales of diesels, Grundler said, VW has to engineer a fix to bring those vehicles into compliance, and receive EPA approval before a recall can commence. It's not clear yet whether that fix will consist of a change to the engine's emission control software or more substantial engineering changes to vehicle hardware, Grundler said.

According to the EPA's website, it could take up to one year to identify "corrective actions," develop a recall plan and issue recall notices. But Grundler declined to discuss a specific timetable.

"Until we gather that information and are convinced ... we're not going to go forward with the recall," Grundler said. "It will take more work to determine what the appropriate remedy for these vehicles is."

Capitol Hill

U.S. lawmakers want more answers, too.

Republican leaders of the House Energy and Commerce Committee today announced plans to hold a hearing on the VW emissions scandal in the near future. The hearing will be held before

the panel's Oversight and Investigations Subcommittee, though no date has been set.

"We will follow the facts. We are also concerned that auto consumers may have been deceived – that what they were purchasing did not come as advertised," U.S. Reps. Fred Upton, R-Mich., and chairman of the Energy and Commerce Committee and Tim Murphy, R-Pa., chairman of the investigations subcommittee, said in a joint statement.

"The American people deserve answers and assurances that this will not happen again. We intend to get those answers."

Also in Washington, the White House said today it was "quite concerned" about reports it was seeing concerning VW's conduct in complying with U.S. Clean Air Act requirements.

"It's fair to say that we're quite concerned by some of the reports that we've seen about the conduct of this particular company, but ultimately this is the responsibility of the EPA to take a look at it and that's exactly what they're doing," said White House spokesman Josh Earnest.

California questions

VW will also have to convince the EPA and California's Air Resources Board that its 2016 model year diesel vehicles will comply with emissions standards and are free of any illegal software, Grundler said. Until then, the agency will continue to withhold the emission certifications needed to begin sales of those models, which are currently being withheld from dealers.

The sales suspensions are a blow to Volkswagen, which counts on diesels for more than one-fifth of the VW brand's sales volume, and has touted its "clean diesel" technology as a key differentiator in the marketplace.

"We've been working with the company for a long time trying to get answers and it wasn't until very recently that VW admitted that these vehicles contained software designed to defeat the emissions standards," Grundler said. "We want to make sure that 2016 model vehicles don't

operate the same way."

Popular Mechanics:

http://www.popularmechanics.com/cars/a17430/ezra-dyer-volkswagen-diesel-controversy/

This VW Diesel Scandal Is Much Worse Than a Recall

This isn't cost-cutting. This is outright cynical deceit.

By Ezra Dyer

Most of the time, media test cars are distinguished only by a license plate that might bear a discreet "manufacturer" tag. Audi diesels, though, are a different matter. Whether a Q7 or an A3, the diesel press cars from Audi (which is part of the Volkswagen group) always bear towering "TDI Clean Diesel" decals across their flanks. I guess the theory is that when the cars are out on the road they're serving double duty as billboards, spreading the gospel about the Volkswagen group's engineering prowess.

A few years ago I bought a nasty Ford F350 diesel for an engine swap, and I parked it next to an Audi A3 and took a few shots to capture the juxtaposition: truck from the dirty diesel past, Audi harkening to the clean-burning future. That certainly looks ironic today.

If you're not up to speed on Volkswagen's shenanigans, you can catch up here. Suffice to say that it seems the A3's sanctimonious TDI Clean Diesel stickers were relevant only when the cars were actually undergoing an EPA emissions test. Out in the real world, 2.0-liter Volkswagens and Audis were as much as 40 times above the legal emissions limit for nitrogen oxides (NOx). According to the EPA, about 482,000 four-cylinder Volkswagens and Audis built since 2009 included what the agency defines as a "defeat device," which is really just software that detects an emissions test and "turns full emissions controls on only during the test." The cheater software was discovered by researchers at West Virginia University who were trying to document the cleanliness of modern diesels. Volkswagen surely wishes they hadn't bothered.

The revelation of this emissions subterfuge answers at least two questions about VW's mighty little diesel. The first concerns urea injection, which every other modern diesel uses to pass emissions tests. The urea-injection systems help to neutralize NOx emissions, but they also add weight and cost to the car, and saddle car buyers with yet another tank of liquid that must be monitored. If you run out of this diesel exhaust fluid, it's like running out of fuel—on trucks with such systems, running dry on urea triggers a severe limp-home mode with a 5 mph speed limiter. That's how seriously the EPA takes NOx.

Everyone wondered how VW met emissions standards while foregoing urea injection. As it turns out, they didn't. It wasn't magical German engineering. Just plain old fraud.

The second question concerned fuel economy. It's been widely noted that four-cylinder TDIs tend to smash their EPA fuel economy estimates in real-world driving. The last TDI Jetta SportWagen I drove was rated at 42 mpg highway, but on 60-mph two-lane roads I averaged more like 50 mpg. That's a huge difference. Did running non-compliant emissions improve fuel economy? That's possible. And if so, that raises an interesting question: When the cheater VWs emitted too much NOx, were they also emitting a lot less CO2 thanks to improved economy? Maybe the good doesn't offset the bad, but it's something to consider. You can bet that VW's lawyers will.

THE INTENTIONALITY BEHIND THE DECEIT MAKES THIS SITUATION DIFFERENT FROM EVEN A HUGE-SCALE RECALL.

So, how is Volkswagen going to fix this? Putting aside the inevitable fines, possible criminal charges, and massive public disgrace, there are half a million cars running an emissions setup that never should've left the factory. And there's no quick fix to make up for VW's lies.

All the other carmakers control diesel emissions by spraying a urea solution into the exhaust stream, where a catalyst converts it to ammonia. The ammonia breaks down NOx into nitrogen and water. If all of that sounds like it would be tough to bolt right in, you're correct. Maybe VW can meet the standards without adding equipment—say, by tweaking the engine control unit (ECU) with a different tuning. But what if that new tuning meets the emissions standards but sacrifices performance or fuel economy? Now you've got 482,000 customers on a class action lawsuit.

There's no easy way out of this, but they'd better figure something out, and pronto. Right now dealers are banned from selling 2.0-liter TDIs, which make up about a quarter of VW's U.S. sales. News of the scandal caused VW to lose about a quarter of its market value, indicating that investors understand how bad this is. There's no cheap fix nor easy settlement here.

The intentionality behind the deceit makes this situation different from even a huge-scale recall. This isn't a story about a part that was made one cent cheaper than it should've been, where a car company cut a corner to save a little cash. It's about a huge corporation eying the rulebook and deciding there's a competitive advantage in violating the Clean Air Act. Incompetence is one thing, but calculated mendacity is quite another.

It's too bad. That Golf SportWagen TDI is a punchy, fun car. It's got great fuel economy, tons of torque and a bargain price. But when something seems a little too good to be true, maybe that's because it is.

Chicago Tribune:

http://www.chicagotribune.com/business/columnists/ct-rosenthal-vw-emissions-0922-biz-20150921-column.html

VW comes clean on dark heart of its diesel cars. Can it clear the air?

Phil Rosenthal

Seems VW fought diesel wars with smoke and mirrors, mostly smoke. What the fahrvergnügen?!

Volkswagen called it clean diesel. Clean like Lance Armstrong. Clean like the Chicago River.

Seriously, what the fahrvergnügen?!

VW has admitted to the Environmental Protection Agency that hundreds of thousands of its diesel cars have been using what is literally a killer app.

The software allowed the vehicles to sail through U.S. emissions tests while reportedly spewing 10 to 40 times the level of certain pollutants as allowed in ordinary use.

It's been smoke and mirrors — mostly smoke — for the last seven model years.

We're talking about 2009, 2010, 2011, 2012, 2013, 2014 and 2015 VW Golfs, Jettas and Beetles, along with Audi A3s, equipped four-cylinder, 2.0-liter turbodiesel engines. Oh, almost forgot the 2012-15 Passats.

That's nearly half-a-million vehicles in all, belching nitrogen oxide to preserve mileage ratings and performance no other carmaker could seem to match, thanks to emissions control systems programmed to operate only when testing protocols were detected.

So we get more smog and ozone and poisons tied to a litany of health problems, such as asthma attacks and other respiratory diseases, along with premature death. VW gets more car sales.

Score one for German engineering and systematic subterfuge, trading our health for its profits.

Apparently the EPA was first tipped to VW's plot when discrepancies showed up in independent testing. But it seems like precisely the sort of thing James Bond is told of when strapped to a nuclear missile about to launch.

The word diabolical comes to mind.

So does evil.

One pictures even C. Montgomery Burns, king of the corner-cutters on "The Simpsons," looking askance. And we don't know yet if VW is the only offender.

The auto industry isn't overburdened by high expectations, particularly in the last 12 months or so.

General Motors last week agreed to a $900 million settlement to end a criminal investigation into its failure to disclose a deadly ignition defect.

Toyota last year agreed to a $1.2 billion penalty for withholding information about its vehicles' unintended acceleration linked to other fatalities.

Takata, it's been revealed, knew of dangerous, potentially fatal defects in its airbags long before alerting federal regulators, leading to the recall of millions of Honda, Toyota, Chrysler, Subaru, GM, Mitsubishi, BMW, Mazda, Nissan and Ford vehicles.

Yet, as Automotive News noted, "Compared with other run-ins between the EPA and automakers, VW's alleged violation stands out in its brazenness."

This takes that kind of amoral corporate behavior to a whole other threat level.

VW didn't just conceal something it discovered endangering people. It created technology for the

specific purpose of allowing it to benefit from endangering people.

Even if you're one of those people who somehow isn't a fan of clean-air standards, it's not a political statement to press on and try to throw authorities off the trail. It's just a crime.

Tampering with emissions control systems, under terms of the Clean Air Act, could mean a fine for VW as high as $37,500 per vehicle or roughly $18 billion, though you know what happens when you start to haggle with car guys.

But even if VW is fined and there's a mandatory recall, some drivers will be reluctant to embrace the fix because it likely will make the vehicle less effective and efficient than the one they thought they bought.

Funny we never caught wind of any of this in those slightly discomfiting VW commercials with the old ladies hitting on a salesman. Least we don't remember any mention of it.

VW pulled the ads off the air and, to the extent it could, off YouTube as word of its scandal came out, yet more proof that a carmaker can indeed move fast to protect something it actually cares about — like its bottom and bottom line.

This isn't the Olympics. It's one thing to try to keep test results from showing banned substances in one's own body, quite another to try to mask bad stuff being inflicted on others.

Cough.

This goes beyond the venality of one corporation to whether there's any confidence left in diesel cars and credibility in the entire auto industry. Even if this is as far as it goes, it will take quite a while to clear the air.

VW recently surpassed Toyota to become the world's largest carmaker, an achievement now eclipsed by the suspicion that there is nothing it wouldn't do.

-

Volkswagen faces US criminal probe on emissions

The US Justice Department is conducting a criminal investigation of Volkswagen's admission to cheating on federal air pollution tests, according to two US officials familiar with the inquiry.

Volkswagen said last week it's cooperating with regulators probing gaps between emissions on the road and lab tests on some diesel models, affecting more than half a million cars. The US officials described the inquiry on condition of anonymity because it's a continuing investigation.

The Wolfsburg, Germany-based automaker plunged as much as 23 per cent Monday to 125.40 euros in Frankfurt, wiping out about 15.6 billion euros ($US17.6 billion) in market value. The stock closed at 132.2 euros, its lowest in more than three years.

Volkswagen's admission is putting pressure on Chief Executive Officer Martin Winterkorn to repair the reputation of the world's biggest carmaker. Winterkorn, whose contract renewal is scheduled for a supervisory board vote on Friday, now faces a serious challenge to his

leadership, said Arndt Ellinghorst, a London-based analyst for Evercore ISI.

"This latest saga may help catalyze further management changes at VW," Ellinghorst wrote in a note Monday.

Justice Department spokesman Wyn Hornbuckle declined to comment.

Criminal inquiries can take months or years and lead to charges against individuals and companies. They can also result in fines and deferred-prosecution agreements, such as the one recently struck with General Motors Co., to spur companies into improving their behaviour and addressing problems revealed during the investigations.

Volkswagen admitted on September 18 to fitting some of its US diesel vehicles with software that turns on full pollution controls only when the car is undergoing official emissions testing, the Environmental Protection Agency said Friday. Affected are diesel versions of the VW Jetta, Golf, Beetle and Passat and the Audi A3.

During normal driving, the cars with the software -- known as a "defeat device" -- would pollute 10 times to 40 times the legal limits, the EPA estimated. The discrepancy emerged after the International Council on Clean Transportation commissioned real-world emissions tests of diesel vehicles including a Jetta and Passat, then compared them to lab results.

VW said it's cooperating with regulators probing gaps between emissions on the road and lab tests on some diesel models. According to the EPA, the company insisted for a year that discrepancies were mere technical glitches.

Winterkorn, who has led VW since 2007, was forced to halt sales of the cars on Sunday and issue a public apology, saying he's "deeply sorry" for breaking the public's trust and that VW would do "everything necessary in order to reverse the damage this has caused."

The violations could result in as much as $US18 billion in fines, based on the cost per violation and the number of cars.

The US accusations are "grave" and must be clarified swiftly, said Stephan Weil, prime minister of the German state of Lower Saxony, which owns 20 percent of Volkswagen's voting shares. "Possible consequences can be decided after that."

The European Commission also said it's taking VW's cheating seriously and is in contact with US regulators and the company about details of the case.

The Guardian:

http://www.theguardian.com/business/2015/sep/21/volkswagen-emissions-scandal-sends-shares-in-global-carmakers-reeling

Volkswagen emissions scandal could snare other companies, whistleblower claims

Billions wiped off value of industry heavyweights amid concerns that manipulation of air pollution data could be 'very widespread'

Joanna Walters Graham Ruddick and Sean Farrell

The emissions-fixing scandal that has engulfed Volkswagen in the US could extend to other companies and countries, one of the officials involved in uncovering the alleged behavior told the Guardian on Monday.

Billions of pounds have been wiped off the value of global carmakers amid growing concerns that emissions tests may have been rigged across the industry.

"We need to ask the question, is this happening in other countries and is this happening at other

manufacturers? Some part of our reaction is not even understanding what has happened exactly," said John German, one of the two co-leads on the US team of the International Council for Clean Transportation (ICCT), the European-based NGO that raised the alarm.

Shares in Volkswagen fell by almost a fifth after the world's second biggest carmaker issued a public apology in response to US allegations that it used a "defeat device" to falsify emissions data.

The US Justice Department is conducting a criminal investigation of Volkswagen admission, according to Bloomberg, which cited two officials familiar with the inquiry.

The company could face a fine of up to $18bn (£11.6bn), criminal charges for its executives, and legal action from customer and shareholders. The US law firm Hagens Berman has already launched a class-action law suit on behalf of customers who bought the affected cars.

VW shares fell by 19% in Frankfurt, wiping almost €15bn (£10.8bn) off its value. Shares in Renault, Volkswagen's French rival, also dropped by 4%, while Peugeot was down 2.5%, Nissan 2.5% and BMW 1.5% amid concerns they could be caught up in investigations.

The US Environmental Protection Agency said on Friday that VW had installed illegal software to cheat emission tests, allowing its diesel cars to produce up to 40 times more pollution than allowed. The US government ordered VW to recall 482,000 VW and Audi cars produced since 2009.

In response, Martin Winterkorn, chief executive of VW, said on Sunday he was "deeply sorry" for breaking the trust of the public and ordered an external investigation.

German tipped off regulators at the California Air Resources Board (Carb) and the US Environmental Protection Agency (EPA) after conducting tests that showed major discrepancies in the amount of toxic emissions some VW cars were pumping out compared with the legal limits.

Max Warburton, an analyst at the financial research group Bernstein, said: "There is no way to put an optimistic spin on this – this is really serious."

A British expert in low-emission vehicles claimed the manipulation of air pollution data could be "very widespread" and that tests in Europe are "much more open to this sort of abuse".

Greg Archer, a former government adviser and head of clean vehicles at the respected Transport & Environment thinktank, said: "I am not surprised. There has been a lot of anecdotal evidence about carmakers using these 'defeat devices'. All credit to the US's EPA for investigating and finding the truth."

Archer, the former managing director of the UK's Low Carbon Vehicle Partnership and non-executive director for the government's Renewable Fuels Agency, said the scandal could spread into petrol cars and CO2 levels. "It is probably not limited to diesel and not limited to emissions," he added.

The "defeat devices" are thought to work by injecting more urea – an exhaust fluid – into the car when it is being tested. This limits nitrogen oxide emissions. The car detects it is being tested because devices such as the anti-collision systems have to be turned off when it is in the laboratory. The extra urea is not injected into the car when it is on the road because it would quickly run out.

Archer claims European tests are more open to abuse because they are conducted before the car goes into mass production and by companies that have been paid by the carmakers. These testing companies have been verified by regulators in each country, such as the Vehicle Certification Agency, but in the US the tests are conducted by an independent body.

Industry leaders in Britain claimed there was "no evidence" that manufacturers are cheating the system in Europe but admitted it needs to be reformed.

Mike Hawes, chief executive of the Society of Motor Manufacturers and Traders, the industry trade body, said: "The EU operates a fundamentally different system to the US – with all European tests performed in strict conditions as required by EU law and witnessed by a government-appointed independent approval agency. There is no evidence that manufacturers cheat the cycle.

"The industry acknowledges, however, that the current test method is outdated and is seeking agreement from the European Commission for a new emissions test that embraces new testing technologies and is more representative of on-road conditions."

The US allegations involve a series of diesel cars produced by VW and the brands it owns, such as Audi. These include the Audi A3, VW Jetta, Beetle, Golf and Passat models. VW has halted sales of these models.

Jochen Flasbarth, a senior environment official in the German government, accused Volkswagen of "blatant consumer deception" over the scandal. The country's economy minister, Sigmar Gabriel, also warned it could damage the reputation of the country's vital automotive industry.

"That this is a bad case, I think is clear," Gabriel said. "You will understand that we are worried that the justifiably excellent reputation of the German car industry and in particular that of Volkswagen suffers." The German government has launched its own investigation into VW and held talks with executives.

The scandal puts the future of Volkswagen chief Winterkorn in serious doubt. Earlier this year he won an internal power struggle with Ferdinand Piëch, who stepped down as chairman. The board of the company is due to meet on Friday to discuss extending Winterkorn's contract.

Winterkorn has been at the helm of VW since 2007 and has been directly responsible for research and development since then.

Guido Reinking, a German automotive analyst, told German television station n-tv: "It's almost impossible to imagine that he didn't know about this special way of programming the engine."

David Bailey, professor of industrial strategy at Aston University in Birmingham, said: "If it is the case that they have been trying to hoodwink regulators, it's a really dumb thing to do. Regulators will look at this more closely now. There has been growing concern about diesel cars and nitrous oxide emissions. The industry has been trying to make the case that the latest regulations largely deal with that issue but regulators will now look more closely at whether they have."

In the wake of the scandal two senior VW executives cancelled a planned appearance at a media event in New York with rock star Lenny Kravitz scheduled for Monday evening.

Herbert Diess, chairman of the VW brand's management board, and Heinz-Jakob Neusser, VW's board member in charge of technical development, had planned to attend the event to introduce the latest version of the Passat mid-size sedan.

The chief executive of VW's US arm, Michael Horn, was still due to attend the event. He is expected to provide a statement about the situation.

Volkswagen Is Now The Target Of A Criminal Investigation: Report

Michael Ballaban

In a move that seemed like an inevitability at this point, the United States Department of Justice is said to have opened a criminal investigation into Volkswagen's admission to cheating on diesel emissions tests, a report from Bloomberg said.

While we had heard rumblings of a possible criminal probe earlier, this news appears to confirm that VW is in fact the subject of an investigation that could lead to prosecutions.

It's way too early to tell whether or not any individuals will personally be held criminally liable for the company's deceptions, but it's not out of the realm of possibility. We haven't seen a case in a long time where a company has admitted intentionally circumventing the law, rather than just a plea of massive institutional incompetence, so it's anyone's guess as to what will happen.

The U.S. Environmental Protection Agency has said that the company can be held responsible for up to $18 billion in fines.

Business Insider:

http://www.businessinsider.com/the-us-government-is-launching-a-criminal-investigation-into-vws-falsified-emissions-figures-2015-9

The US government is launching a criminal investigation into VW's falsified emissions figures

Benjamin Zhang

The US Department of Justice has launched a criminal probe into Volkswagen's falsification of emissions data, Bloomberg news is reporting.

Last week, the Environmental Protection Agency accused the automaker of falsifying the data using secret software in nearly 500,000 cars.

According to Bloomberg's Del Quentin Wilber, two government officials close to the situation say the Justice Department is conducting a criminal investigation into the allegations.

Last week, the EPA accused VW of using the hidden software — called a "defeat device" — to dodge clean-air standard during emissions testing.

"Using a defeat device in cars to evade clean air standards is illegal and a threat to public health," assistant administrator for the Office of Enforcement and Compliance Assurance Cynthia Giles said in a statement on Friday.

“Working closely with the California Air Resources Board, EPA is committed to making sure that all automakers play by the same rules. EPA will continue to investigate these very serious matters.”

The EPA alleges that VW installed software that detects when the car is undergoing emissions testing, at which point the software would turn on all of the car's emissions control systems. But the EPA claims that the software greatly reduces the cars' pollution-control systems during normal driving conditions.

"This results in cars that meet emissions standards in the laboratory or testing station, but during normal operation, emit nitrogen oxides, or NOx, at up to 40 times the standard," the EPA said in a statement.

Across the Atlantic, the German government is also taking a look at Volkswagen's emissions data. A spokesperson for the country's Motor Vehicle Agency told the Wall Street Journal that is has asked automakers to provide accurate emissions information to "determine whether similar instances of manipulation have taken place in Germany or Europe," However, there is no word of any official investigation on the part of the German government.

Over the weekend, VW CEO Martin Winterkorn issued the following statement:

The U.S. Environmental Protection Agency and the California Air Resources Board (EPA and CARB) revealed their findings that while testing diesel cars of the Volkswagen Group they have detected manipulations that violate American environmental standards.

The Board of Management at Volkswagen AG takes these findings very seriously. I personally am deeply sorry that we have broken the trust of our customers and the public. We will cooperate fully with the responsible agencies, with transparency and urgency, to clearly, openly, and completely establish all of the facts of this case. Volkswagen has ordered an external investigation of this matter.

The recall affects 482,000 diesel-powered cars sold in the US since 2008. They include:

Volkswagen Jetta TDI: 2009-20015

Volkswagen Beetle TDI: 2009-2015

Audi A3 TDI: 2009-2015

Volkswagen Golf TDI: 2009-2015

Volkswagen Passat TDI: 2014-2015

We have reached out to Volkswagen and the DOJ for comment. We will update when when we hear back.

Dear Volkswagen: Exaggeration? Not so bad. Deception? Never okay

by Jennifer Reingold @jennrein SEPTEMBER 21, 2015, 3:44 PM EDT

One wonders what would have happened had Volkswagen opted for exaggerating its results rather than falsifying them.

The business world—and the journalists who cover it—have always rewarded a healthy bit of hype. Best Ever! New and Improved! Now with enhanced whatevers!

Actually, the love of the big claim goes far beyond the business world and is interwoven throughout society. Donald Trump's current popularity is only the latest example of bombast, er, trumping reality.

But we do have limits, as the scandal at Volkswagen shows. So far, the company's stock price has fallen almost 20% since it admitted on September 18 that it had installed software that allowed its cars to fake their performance on emissions testing in order to fool the EPA.

No one knows what will happen to the $221 billion in sales car company—the world's largest—going forward, and whether the deception stretches all the way to the CEO, Martin Winterkorn. But one wonders what would have happened had the company opted for exaggerating its results rather than falsifying them.

Don't get me wrong: I'm not advocating that any performance standards—particularly those that affect safety and health—should ever be presented with anything but the full truth. But this move was so brazen, so breathtakingly full of chutzpah, that it is hard to imagine VW's brand recovering for a very, very long time; nor, one imagines, will its culture.

The plot goes far beyond one or two people hiding out in a cubicle and must have involved hundreds of people building such a system and making sure it was implemented inside of

428,000 cars. One wonders what the company might have been able to accomplish instead if it put all that brainpower toward meeting emissions requirements rather than circumventing them.

Consider the alternative: VW tried—and failed—to meet the EPA's emissions standards, after saying that they believed they had diesel engines that did the job. The EPA (which, it's worth noting, relies primarily on self-tested data) would have—hopefully—tested its engines, found Volkswagen deficient, and fined the company. It would have been costly, yes, but it wouldn't have been all that surprising. And VW's credibility wouldn't have been destroyed in the process. After all, exaggeration, for better or worse, is just how the game is played.

MarketWatch:

http://www.marketwatch.com/story/white-house-quite-concerned-about-volkswagen-emissions-charges-2015-09-21

White House 'quite concerned' about Volkswagen emissions charges

'Quite concerned': How White House press secretary Josh Earnest characterized Obama administration reaction to the allegations against Volkswagen.

By ROBERT SCHROEDER

The Obama administration is "quite concerned" over allegations that Volkswagen cheated on U.S. emissions tests, a White House spokesman said Monday, but added it is up to the Environmental Protection Agency to investigate the matter.

"I think it's fair to say that we're quite concerned by some of the reports that we've seen about the conduct of this particular company," spokesman Josh Earnest told reporters at a regular briefing.

On Friday, the Environmental Protection Agency and the California Air Resources Board alleged that Volkswagen VLKAY, -17.38% VOW3, -18.19% used software in cars to make diesel-

powered engines appear to have lower levels of emissions than they actually did. The company halted U.S. sales of some diesel-powered cars.

Earnest said it is ultimately the responsibility of the EPA to look at the issue, "and that's exactly what they're doing."

Reaction from Congress was minimal — though that could change.

"VW should expect scrutiny from Congress, legal problems, a potential multibillion-dollar fine and a batch of uncomfortable headlines," wrote Forbes contributor Micheline Maynard on Monday.

"If Volkswagen willfully sought to evade the Clean Air Act and fraudulently sold cars to millions of consumers with this technology, EPA should pursue the most severe action possible to deter others from doing the same," Rep. Frank Pallone, a New Jersey Democrat, said on Friday.

"We must ensure that this does not happen again and that consumers can trust the products that they buy," said Pallone, the top Democrat on the House Energy and Commerce Committee. The panel's oversight and investigations subcommittee held one of the several hearings into the General Motors GM, +0.43% ignition-switch recall in April 2014.

The allegations reportedly include Volkswagen Passats made at the company's Chattanooga, Tenn., facility in 2014 and 2015. A Volkswagen spokesperson did not immediately return a request for comment.

MarketWatch reached out to members of Tennessee's congressional delegation, but none offered any comment.

The 1,400-acre Chattanooga plant has more than 3,200 Volkswagen employees, the company

says.

Volkswagen's appalling clean diesel scandal, explained

Brad Plumer

It sounds like the sinister plot of some straight-to-DVD movie. Since 2009, Volkswagen had been installing elaborate software in 482,000 "clean diesel" vehicles sold in the US, so that the cars' pollution controls only worked when being tested by regulators. The rest of the time, the vehicles could freely spew hazardous, smog-forming nitrogen oxides.

Suffice to say, regulators were livid once they caught on. On Friday, the Environmental Protection Agency announced that Volkswagen had very flagrantly violated the Clean Air Act. Not only did the EPA order the German company to fix the affected vehicles,** but the agency has the authority to levy fines as high as $37,500 per car, a maximum of $18 billion. (To put that in perspective, the company's pretax net income was about $4.7 billion last year.) The US government is also mulling criminal charges.

Volkswagen, in other words, is in deep shit. The company's CEO, Martin Winterkorn, is now apologizing profusely and pledging an external probe to find out what happened. VW just halted US sales of its 2015 and 2016 clean diesel vehicles, including Passat, Jetta, Golf, and Beetle models. Meanwhile, VW's stock price plummeted on Monday morning, the company losing nearly one-fifth its market cap in a blink:

This scandal raises a few larger questions, though: Why did Volkswagen cheat in the first place? And why was it so easy for the company to evade regulators for years? To get a better handle on the story, we need to take a brief trip through the tangled history of clean diesel vehicles — the specific cars that VW was selling.

Clean diesel cars were supposed to offer great mileage and low pollution — a tricky task

One basic fact to understand here is that there are two main types of combustion engines widely available today: diesel and gasoline. And there are real trade-offs to each.

Diesel engines have long been popular in Europe, and one of their major advantages is fuel economy. Diesel fuel contains more energy per gallon than gasoline, and the diesel engines themselves are more efficient. Put it together, and the typical diesel car can travel up to 30 percent farther on a gallon of fuel than its gasoline counterpart.

But there's a catch. While diesel cars get better mileage and emit fewer carbon-dioxide emissions, they also emit more nitrogen oxides (NOx), which help form smog, and particulate matter, which can damage lungs. Both types of pollution can have serious health effects.

Historically, Europe has dealt with this trade-off by imposing looser emissions standards on diesel cars in order to pursue higher fuel economy. That's one reason European cities like Athens have a serious smog problem. In the United States, by contrast, we've imposed much stricter rules around smog and other conventional pollutants since the 1970s, one reason diesel cars haven't caught on as widely here. (Heavy trucks favor diesel engines, though.)

In recent years, however, things have shifted. The Obama administration has been ratcheting up fuel-economy standards in the United States, which puts a higher premium on mileage. At the same time, diesel technology has gradually been getting cleaner through a combination of lower-sulfur fuel, advanced engines, and new emission-control technology. So automakers have shown a renewed interest in "clean diesel" cars that, in theory, don't suffer from that trade-off between performance and pollution.

These vehicles have proved popular in the United States. Since 2009, Volkswagen has sold more than 482,000 clean diesel cars containing a four-cylinder turbocharged direct injection engine. This included versions of the Passat, Jetta, Golf, Beetle, and Audi's A3. Drivers liked them.

Except, as it turns out, VW was lying about its clean diesel cars.

Volkswagen couldn't balance performance with low pollution. So it cheated.

Since 2009, we now know, Volkswagen had been inserting intricate code in its vehicle software that tracked steering and pedal movements. When those movements suggested that the car was being tested by regulators in the laboratory for nitrogen-oxide emissions, the car automatically turned its pollution controls on. The rest of the time, the pollution controls switched off.

Regulators didn't notice this ruse for years. The problem was only uncovered by an independent group, the International Council on Clean Transportation, which wanted to investigate why there was such a discrepancy between laboratory tests and real-road performance for several of VW's diesel cars in Europe. So they worked with researchers at West Virginia University, who stuck a probe up the exhaust pipe of VW's clean diesel cars and drove them from San Diego to Seattle. (These details come from Dana Hull and Jeff Plungis' excellent Bloomberg tick-tock.)

What the researchers found was jaw-dropping. On the road, VW's Jetta was emitting 15 to 35 times as much nitrogen oxide as the allowable standard. The VW Passat was emitting 5 to 20 times as much. These cars were emitting much more pollution than they had in the labs.

Both California's air-pollution regulator and the EPA ordered Volkswagen to investigate and fix the problem in May 2014, and the company said it had worked on a software patch. Once again, the cars performed well in testing. And once again, real-world performance didn't match up. At that point, regulators started grilling Volkswagen's engineers about the discrepancy, and the company eventually cracked, admitting the existence of these defeat devices, which had been carefully hidden in the software code. Hence the scandal.

Volkswagen hasn't explained exactly why it cheated, but outside analysts have a pretty good guess. The NOx emission controls likely degraded the cars' performance when they were switched on — the engines ran hotter, wore out more quickly, and got worse mileage. Some experts have suggested that the emission controls may have affected the cars' torque and acceleration, making them less fun to drive. (Indeed, some individual car owners have been known to disable their cars' emission controls to boost performance, though this is against the law.)

In other words, Volkswagen wasn't able to produce diesel cars that had the ideal mix of performance, fuel economy, and low pollution. (Or, at least, they couldn't do this profitably.) So they "solved" this trade-off by sacrificing cleanliness and loosening the emission controls. And they accomplished this via software designed to deceive regulators. This was wildly illegal, and they got caught.

The VW scandal exposes problems with current emission tests

Volkswagen isn't the first company to cheat on its emission tests. As Frank O'Donnell of Clean Air Watch pointed out to me, the EPA caught a number of truck manufacturers, including Caterpillar and Volvo, doing something similar back in 1998 — programming their diesel trucks to emit fewer pollutants in lab tests than they did on the road. (The trucks would slowly emit more and more NOx as they traveled longer distances at constant speed, something that labs couldn't catch.)

Part of the problem here is that regulators tend to test these vehicles in laboratory conditions, which are fairly predictable and hence easier to game. Combined with the fact that automakers are developing ever-more-elaborate software that can control and fine-tune engines, and there are ample opportunities for fraud.

EUROPEAN REGULATORS WILL SOON START REQUIRING ON-ROAD EMISSIONS TESTING

In theory, there are ways to make cheating harder. Starting with model year 2017 vehicles,

European regulators are going to start requiring automakers to test their passenger cars on the road in addition to laboratory testing. That sort of regime would've made it harder for Volkswagen to do what it did. But it's also unlikely that this is the last time we'll see an automaker come up with a fiendishly clever way to cheat.

Meanwhile, the VW scandal raises another issue surrounding car regulations, as Alex Davies explains at Wired. Modern-day cars feature complex computer systems and software. And, right now, this software is protected under the 1998 Digital Millennium Copyright Act — it's illegal to fiddle with it. The ostensible rationale is to make it harder for consumers to tamper with emissions controls. But these protections also make it harder for independent researchers to scrutinize that code and identify problems like VW's little emissions trick. Some experts have proposed DMCA exemptions to allow researchers to test and evaluate these engines, but so far automakers and the EPA have resisted this. Presumably, if those exemptions had existed, Volkswagen might've been caught sooner.

Volkswagen is now facing serious consequences

At this point, Volkswagen has been caught red-handed and has to face the consequences. The company straight-up lied about its cars and exacerbated the country's air-pollution problem. (Getting a precise estimate of the health consequences here could be difficult, since it depends on where the cars were located, how much extra smog actually resulted, and so forth.)

In response, the company has pledged to stop selling 2015 and 2016 Volkswagen and Audi models equipped with clean diesel engines and will likely end up recalling the 482,000 cars now on the road to fix the software.** It's unclear how many customers will want to "fix" the problem, however, since, again, any patch might degrade gas mileage and/or performance.

Meanwhile, Volkswagen could face criminal prosecution — not to mention billions of dollars in fines, potentially. The Clean Air Act allows a fine of $37,500 per noncompliant vehicle. If the EPA really wanted to lower the hammer, that would amount to $18 billion. Again, VW's pretax net income was about $4.7 billion last year, so that would be a crippling hit. Volkswagen is the world's biggest automaker by sales, but it's not quite as profitable as competitors like Toyota and has already struggled to gain a foothold in the US market. This could be a huge deal for the company.

It also raises questions about the future of clean diesel vehicles. Clean diesel appears to be a promising technology — in theory, these vehicles could get both excellent mileage and low emissions. But this scandal raises serious questions about how well automakers can actually achieve both goals in practice.

** For any concerned car owners, the models expected to be recalled include: The 2009-2015 VW Beetle 2.0L TDI; 2009-2015 VW Golf 2.0L TDI; 2009-2015 VW Jetta 2.0L TDI; 2009-2015 Audi A3 2.0L TDI; and 2014-2015 VW Passat 2.0L TDI.

EPA accuses VW of cheating on emissions tests

BY JORGE WEINER ON SEPTEMBER 21, 2015 BUSINESS

VW halted sales of the models involved on Sunday and said it's cooperating with the probe and ordered its own external investigation into the issue.

"The charges here are truly appalling: that Volkswagen knowingly installed software that produced much higher smog-forming emissions from diesel vehicles in the real world than in pre-sale tests", said Frank O'Donnell, president of Clean Air Watch, a Washington-based advocacy group.

VW is to stop selling four cylinder diesel cars in the USA after the firm was found to have rigged emissions test on up to 500,000 vehicles, it has emerged. The reality is that Volkswagen will face huge fines, rumoured to be as high as 18 billion US dollars.

German competitors BMW AG and Daimler AG said on Monday they aren't aware of a similar USA probe into their cars.

Once on the road, the cars produced nitrogen oxide pollutants at up to 40 times the legal standard.

The EPA and California authorities acted quickly after being told of the violation, German said.

Volkswagen, which recently edged out Japan's Toyota to become the world's top-selling automaker, has had a hard year, its share price having fallen from more than 250 euros amid signs of faltering sales in the US and China. He said he was "deeply sorry" for the violation of United States rules. The models include Jetta, Beetle, Golf, Passat and Audi A3.

Stefan Bratzel, director at the Center for Automotive Management, a research group, said the damage to VW's image would be as great as the financial fines.

"Our climate policy stands for itself and I think it's internationally recognized that Germany is one of the drivers on the way to (the global climate summit in) Paris", he said. The potential wonderful is $37,500 per vehicle and 482,000 autos are a part of the case, yielding a possible superb of greater than $18 billion, Giles stated on a telephone name with reporters Friday.

The EPA in November 2014 hit South Korean auto makers Hyundai Motor Co. and Kia Motors Corp. with a record $100 million penalty for overstating fuel-economy claims and forced the companies to cough up another $200 million in regulatory credits.

The cars allegedly do so with software that detects when the vehicle is undergoing emissions testing, and then turns full emissions controls on only during the test. When vehicles are being driven normally, the computer disables the emissions controls.

According to the The New York Times, this latent software within numerous Volkswagen

vehicles switches on emissions control systems only during an inspection. The California Air Resources Board issued a similar letter.

"Our goal is to ensure that the affected cars are brought into compliance, to dig more deeply into the extent and implications of Volkswagen's efforts to cheat on clean air rules and to take appropriate further action".

The feature, which the EPA called a "defeat device", masks the true emissions only during testing.

VW under fire amid EPA accusations it cheated on emissions tests

By Thad Moore

Volkswagen shares plunged Monday after U.S. regulators accused the German automaker of cheating on emissions tests, alleging that nearly 500,000 cars weren't meeting federal standards.

An apology Sunday from VW's chief executive did nothing to temper anxious investors, who

wiped out nearly a fifth of the company's value in a single day. VW's stock closed the day Monday at 132.20 euros, down 19 percent.

The selloff comes on the heels of Environmental Protection Agency allegations that the automaker had designed software to let its diesel cars detect when they were being tested for emissions.

VW, one of the world's largest automakers, has halted sales of some vehicles in the United States and pledged to cooperate with regulators. "We at Volkswagen will do everything that must be done in order to re-establish the trust that so many people have placed in us, and we will do everything necessary in order to reverse the damage this has caused," Martin Winterkorn, VW's chief executive, said in a statement.

In the lab, they met standards. On the road, regulators say, they emitted nitrous oxide at up to 40 times federal standards. The software, known as a "defeat device," was installed in some 482,000 cars, spanning model years 2009 through 2015, regulators say.

The EPA and California regulators began asking questions in May 2014 after West Virginia University researchers published a study that found lab results didn't match up with road tests.

For more than a year, VW told regulators that the difference owed to "various technical issues and unexpected in-use conditions," the EPA said in a letter sent to the automaker Friday. But company officials didn't admit to the practice until earlier this month when regulators threatened not to approve its 2016 line of diesel cars.

The years-long practice could carry a hefty price tag for the automaker. The company could be fined $37,500 for each car it sold with a defeat device installed — a potential fine of $18 billion.

"The company will have to recall nearly 500,000 affected cars, which will cost it millions of dollars, and that's even before the damage to its brand and potential fines," Michael Hewson, chief market analyst at CMC Markets, told the Associated Press.

The revelation also led Consumer Reports[consumerreports.org] to pull its recommendation of VW's Jetta and Passat diesel model. (The magazine said it would reconsider its decision once the automaker introduces a fix to lower emissions.)

For his part, Winterkorn apologized Sunday, saying the company would cooperate "with transparency and urgency."

"I personally am deeply sorry that we have broken the trust of our customers and the public," he said in a statement. "We do not and will not tolerate violations of any kind of our internal rules or of the law."

Volkswagen Denied Deception to E.P.A. for Nearly a Year

By JACK EWING SEPT. 21, 2015

FRANKFURT — For nearly a year, Volkswagen officials told the Environmental Protection Agency that discrepancies between the formal air-quality tests on its diesel cars and the much higher pollution levels out on the road were the result of technical errors, not a deliberate attempt to deceive Washington officials.

But early this month, Volkswagen executives finally made a startling admission: The diesels it sold in the United States had software deliberately designed to cheat on the tests.

The company was evidently concerned that actually meeting the federal emissions standards would degrade the power of the engines, which it marketed as comparable in performance to gasoline engines. Meeting the standard would also undercut the fuel efficiency that is one of the main selling points of diesels.

The admission came only after the E.P.A. threatened to withhold approval for Volkswagen's new 2016 models, according to letters sent to company officials by the E.P.A. and California regulators.

Since news of that mass deception broke on Friday, Volkswagen has scrambled to conduct damage control, with its chief executive issuing an apology and the company saying it would not sell its 2015 and 2016 diesel cars in the United States.

But that did not stop Volkswagen shares from plummeting when trading opened in Europe on Monday. And the apology has not relieved pressure on Martin Winterkorn, the Volkswagen chief executive, whom analysts said would have tough questions to answer, seeking to know when he and other top executives at the company, which is ruled from the top with Germanic precision, were aware of the diesel deception.

Adding to pressure on Volkswagen, the German government said on Monday that it would also begin an inquiry to make sure that Volkswagen and other carmakers are complying with laws on auto emissions.

The E.P.A. disclosed the yearlong series of letters with Volkswagen as part of accusations it made against the company on Friday. The agency will require the company to recall nearly half-a-million vehicles equipped with 2-liter diesel engines dating to the 2009 model year. Volkswagen also faces fines that could run into the billions of dollars.

Volkswagen shares plunged about 20 percent on Monday, as investors registered alarm at the damage the company could suffer.

Mr. Winterkorn issued an apology on Sunday, saying the company had "broken the trust of our customers and the public."

But the sophistication of the software used to manipulate emissions tests in the United States, and extensive attempts by Volkswagen to deflect official scrutiny before admitting misconduct this month, are sure to raise questions about Mr. Winterkorn's effectiveness only months after he survived an internal power struggle.

"Either he knew, or he didn't know, which is even worse," said Ferdinand Dudenhöffer, a professor at the University of Duisburg-Essen who is a longtime Volkswagen critic. "Any politician in his situation would have to resign."

Volkswagen's supervisory board, which Mr. Winterkorn reports to, will hold a regularly scheduled meeting on Friday, and it is certain to discuss the E.P.A. action.

After being confronted last year with evidence that some diesel models did not comply with pollution standards under certain conditions, Volkswagen executives originally offered technical explanations, according to a letter of complaint sent to the company by the E.P.A. and the California Air Resources Board.

It was only on Sept. 3, according to the letters, that executives at Volkswagen of America, the company's United States unit, admitted that cars equipped with the 2-liter diesel motors contained the software.

The software measured factors such as the position of the steering wheel, the vehicle's speed and even barometric pressure to sense when the car was being subjected to testing, the E.P.A. said. The car then configured itself to reduce emissions of nitrogen oxide, a gas that is a major contributor to smog and is linked to an array of respiratory ailments including asthma, emphysema and bronchitis, the E.P.A. said on Friday.

Volkswagen is known for being a tightly controlled, autocratic organization, raising questions about how such a sophisticated system could have been installed in nearly half a million vehicles without knowledge of top management.

The plunge in Volkswagen shares was a clear indication that investors believe that company profit and sales could suffer because of the E.P.A. accusations. However, Volkswagen is relatively immune to stock market pressure because only 12 percent of its voting shares are traded. Porsche Automobil Holding, controlled by members of the Porsche family, holds a slight majority. The state of Lower Saxony owns 20 percent and the sovereign wealth fund of Qatar owns 17 percent.

Stephan Weil, the prime minister of Lower Saxony, where Volkswagen has its headquarters and major manufacturing operations, said in a statement on Monday, "Manipulation of an emissions test is completely unacceptable and without any justification."

But Mr. Weil said consequences could be discussed only after a thorough investigation of the circumstances.

In Berlin, the government of Chancellor Angela Merkel said it would ask carmakers for information as the first step in an inquiry.

"We expect reliable information from carmakers so that the Federal Office for Vehicles can check whether similar manipulation in the exhaust systems has taken place in Germany or Europe," Andreas Kübler, a spokesman for the Environment Ministry, told reporters in Berlin.

The European Commission has contacted Volkswagen as well as the E.P.A. for details about the accusations, a commission spokeswoman said.

"It is premature to comment on whether any specific immediate surveillance measures are also

necessary in Europe and whether vehicles sold by Volkswagen in Europe are also affected," the spokeswoman said in an email. "We are taking the matter very seriously."

South Korea also planned to test Volkswagen cars to make sure they were in compliance with pollution rules, according to news reports.

More than half of all vehicles sold in Europe are diesels, which are popular because they typically offer better fuel economy than gasoline. European Union pollution rules were more favorable to diesels than United States rules, but they have been progressively tightened. The most recent standard, known as Euro 6, took effect for all new cars sold on Sept. 1.

Technology exists to reduce the amount of nitrogen oxides emitted by diesels. But the technology also tends to reduce fuel economy as well as performance. The software installed by Volkswagen on vehicles sold in the United States avoided this trade-off, which could have come as a disappointment to American customers, by scaling back pollution controls when the car was not being tested.

The accusations by the E.P.A. are a blow to Volkswagen's efforts to build up its meager market share in the United States, in part by promoting "clean diesel" technology.

The silver lining for Volkswagen, though, may be that its most profitable vehicles in the United States are Porsche and Audi cars not affected by the E.P.A. action. The cars affected are Volkswagen Golf, Jetta, Beetle and Passat models from 2009 through 2015 that are equipped with 2-liter diesel engines.

Another silver lining for Volkswagen may be that diesel powered cars account for only a tiny fraction of sales in China, which is the company's largest market.

Among Audi models, only the compact A3 is affected in the United States. The A3 accounted for less than a fifth of the 111,000 vehicles that Audi sold in the United States from January through August, and only a fraction of those A3s would have been equipped with diesels.

The E.P.A. said on Friday that Volkswagen would be required to recall the affected vehicles for repairs to make them compliant with smog regulations. Car owners would not have to pay for the repairs. Many owners may not bother, though, because the changes are likely to reduce fuel consumption and performance.

John Schilling, a Volkswagen spokesman, said on Sunday that the company would stop selling 2015 and 2016 Volkswagen and Audi models equipped with the 2-liter diesel engines, which the company had marketed as "clean diesel." The company will also stop selling used cars that have the engines, Mr. Schilling said.

He said he did not know how many models would be stuck on dealer lots as a result of the decision. This month, Volkswagen had said that 23 percent of new cars sold in August in the United States were diesels, or 7,400 vehicles. Some diesels, such as those used in Volkswagen S.U.V.s, are not affected by the E.P.A. action.

Faulty Tests Cost VW Billions

By FRANK JORDANS and PAN PYLAS, Associated Press

BERLIN (AP) — Around 15 billion euros ($16.9 billion) was wiped off the market value of

Volkswagen AG on Monday following revelations that the German carmaker rigged U.S. emissions tests for about 500,000 diesel cars.

By midday trading in Frankfurt, Volkswagen's share price was 19.3 percent lower at a three-year low of 130.20 euros. Its dramatic fall weighed heavily on Germany's main stock index, the DAX, which underperformed its peers in Europe with a 0.6 percent decline.

Volkswagen's market woes Monday follow a weekend that saw the company's reputation for probity seriously damaged by revelations from the Environmental Protection Agency in the U.S. that it had skirted clean air rules. All told, the EPA indicated that VW faces fines that could run up to more than $18 billion.

The EPA said VW used a device programmed to detect when the cars are undergoing official emissions testing. The software device then turns off the emissions controls during normal driving situations, allowing the cars to emit more than the legal limit of pollutants.

Volkswagen marketed the diesel-powered cars, which account for about 25 percent of sales, as being better for the environment. The cars, built in the last seven years, include the Audi A3, VW Jetta, Beetle, Golf and Passat models.

"The company will have to recall nearly 500,000 affected cars, which will cost it millions of dollars, and that's even before the damage to its brand and potential fines," said Michael Hewson, chief market analyst at CMC Markets.

The agency has ordered VW to fix the cars at its own expense but said car owners do not need to take any immediate action. The EPA insisted that the violations do not pose any safety hazard and said the cars remain legal to drive and sell while Volkswagen comes up with a plan to recall and repair them. However, it said the cars posed a threat to public health.

The EPA also indicated the scale of the fines that could be imposed on VW. It said the carmaker could be hit up to $37,500 per vehicle for the violations — a total of more than $18 billion. The California Air Resources Board is also investigating.

Volkswagen has had a difficult year, its share price having fallen from over 250 euros amid signs of faltering sales in the U.S. and China.

VW edged out Toyota to become the world's top-selling automaker the first half of 2015. But a hit to its reputation from the emissions revelations could hamper its efforts at a sales rebound in the U.S.

If other regulatory authorities decide VW has a case to answer, then the carmaker faces the potential for even bigger fines.

"The news so far revolves around the U.S. impact, but if European investigators become interested the potential penalties could multiply very quickly," said Chris Beauchamp, senior market analyst at IG.

Volkswagen 'sorry,' promises probe on EPA violations

By DANIEL CHAITIN (@DANIELCHAITIN7) • 9/20/15 3:23 PM

Volkswagen apologized Sunday following allegations by the Environmental Protection Agency and the state of California that hundreds of thousands of diesel cars made by the German automaker are breaking emissions laws in the United States.

"The Board of Management at Volkswagen AG takes these findings very seriously," wrote Martin Winterkorn, CEO of Volkswagen. "I personally am deeply sorry that we have broken the trust of our customers and the public. We will cooperate fully with the responsible agencies, with transparency and urgency, to clearly, openly, and completely establish all of the facts of this case. Volkswagen has ordered an external investigation of this matter."

On Friday, the EPA and California charged Volkswagen with willfully installing software in its 4-cylinder diesel cars that would allow cars to bypass emission standards. The cars cited for violations include signature Volkswagen cars manufactured between 2009 and 2015, including the Jetta, Passat, Beetle and Golf, as well as the A3 from Audi, Volkswagen's luxury line.

All together, about 482,000 diesel passenger cars sold in the United States since 2008 are included in the allegations.

The statement promises that Volkswagen will "re-establish trust" it may have lost and that the company will reverse any damage done.

"We do not and will not tolerate violations of any kind of our internal rules or of the law," Winterkorn added.

The EPA issued a notice of violation to Volkswagen, while the state of California sent an In-Use Compliance letter. Both the EPA and the California Air Resources Board are conducting separate investigations into the alleged misbehavior.

Recalls are likely, and the combined fines could add up to $18 billion if the result of the investigations support the allegations.

The EPA alleges that the Volkswagen cars are fitted with software to trick emission testers, but that under normal operation emit nitrogen oxides at up to 40 times the standard. Under the Clean Air Act, such an instrument is classified as a "defeat device."

"Using a defeat device in cars to evade clean air standards is illegal and a threat to public health," said Cynthia Giles, EPA assistant administrator for the Office of Enforcement and Compliance Assurance. "Working closely with the California Air Resources Board, EPA is committed to making sure that all automakers play by the same rules. EPA will continue to investigate these very serious matters."

Volkswagen Skirts EPA Rules; It's Not the First Time

By Arleen Richards

Volkswagen Group of America admitted to sidestepping clean air standards after the EPA and California's clean air watchdog confronted the German automaker with evidence of high in-use emissions from light-duty diesels.

On Friday, Sept. 18, the EPA slapped VW with a notice of violation for using sophisticated software to circumvent national emissions standards. The software, which the EPA calls a "defeat device," is designed to implement full emissions control systems when the car is undergoing state emissions testing. During normal driving, the emissions control is turned off, permitting the significantly harmful diesel fumes to be expelled—40 times more than allowed under the Clean Air Act. VW and the California Air Resources Board (CARB) have both initiated investigations.

Volkswagen CEO Dr. Martin Winterkorn, on Sunday, apologized for breaking the public's trust and vowed to cooperate fully with agency investigations.

He ordered an internal investigation, saying in a statement, "We do not and will not tolerate

violations of any kind of our internal rules or of the law."

But this episode is not the first time the EPA or CARB has had run-ins with VW. In the past, both agencies charged VW with similar violations, which resulted in penalties.

Defective Oxygen Sensors

VW previously failed to report its discovery of emission defects in at least 329,000 of its 1999, 2000, and 2001 Golf, Jetta, and New Beetle vehicles.

In May 2001, after conducting a random test, the EPA identified a problem with tailpipe emissions in the 1999 model vehicles caused by a failed oxygen sensor. It turns out, VW knew about the problem for a year already—since it had received numerous warranty claims associated with cracked oxygen sensors—but failed to report it. According to the Clean Air Act, any emission-related defect found in 25 vehicles or engines of the same model year has to be reported within 15 days.

VW spent $26 million in January 2002 to recall all the vehicles and replace or repair the part. Another estimated $660,000 was spent on an enhanced defect tracking system.

The EPA finally settled its case with VW in 2005, penalizing the delinquent car maker $1.1 million.

The state of California has been working closely with the EPA in testing VW cars and issued a separate notice of violation to VW in the current case.

California has been a leader in clean energy investments and set the stage in 2006 for transitioning to a sustainable, low-carbon future with the passage of AB 32, a law requiring sharp reduction in greenhouse gases. Since then, several legislative initiatives have been implemented to build the next generation of clean, fuel-efficient cars.

The CARB implements the state's vehicle regulations through a vigorous certification process, as well as compliance and enforcement programs. It regularly tests vehicles to ensure compliance with air quality standards.

In 2004, VW settled a case with CARB for $552,500 for selling cars in California that had not been properly certified. VW admitted to selling 84 new 2002 vehicles from several retail locations throughout the state, attributed to an error in its electronic ordering system.

The EPA is expected to compel VW to issue a recall notice in order to remedy the current emissions problem, which could take up to a year after identifying the appropriate corrective action and a recall plan.

Volkswagen Tells Dealers To Halt Sales Of New TDI Cars Amid Diesel Cheating Scandal

Alanis King

Following the government investigation of Volkswagen's diesel emissions, The Detroit News reports the automaker ordered its U.S. dealerships to halt sales of new 2016 and remaining 2015 TDI car models with 2.0-liter diesel engines.

According to the Environmental Protection Agency and California Air Resources Board, VW dodged federal emissions requirements for some 482,000 of its diesel cars — including the Passat, Jetta, Golf, Beetle, SportWagens and Audi A3 — manufactured from 2009 to 2015. The models contain a "defeat device" which exists to detect when the car is under testing conditions, allowing for it to activate the full emissions-control systems only in those circumstances.

In other words, environmental officials say that the street cars are emitting between 10 and 40 times the amount of allowable nitrogen oxide pollution, which is not only illegal but harmful to both the environment and public.

The EPA is taking action on 2016 diesel models. Christopher Grundler, director of the EPA Office of Transportation of Air Quality, said that the government will not grant VW a "certificate of conformity" to sell the 2016 models with 2.0-liter diesel engines, meaning they cannot be sold.

VW dealers have been waiting for the 2016 models to replenish showrooms. Most U.S. VW dealers don't have any remaining 2015 diesel cars to sell.

VW is barred from selling 2016 model vehicles with the 2.0 liter diesel engine until "they get answers to the questions of how these vehicles are being operated. Volkswagen couldn't explain why we're getting these excess emissions," Grundler said.

Meanwhile, whatever 2015 models remain on lots have also been ordered not to be sold. As Automotive News notes, four-cylinder TDI models account for 20 to 25 percent of VW's U.S. sales, so this is going to hurt.

In addition, VW has ordered an outside investigation to find out what happened and "reverse the damage this has caused," CEO Martin Winterkorn said in an apologetic statement.

According to the EPA, the agency is now checking to see if other automakers are bypassing the laws on diesel engines as well.

While no official recall is underway just yet, the News reports:

EPA said VW violated federal law and, in theory, could face fines of up to $18 billion —

$37,500 per vehicle — as well as criminal prosecution. Both agencies issued notices of non-compliance to VW Friday, a step necessary before ordering a recall.

The EPA will not take action to stop VW owners from driving their personal cars until a solution is made available, but VW did remove its "clean diesel" advertisements from YouTube and television.

CBC News (Canada):

Volkswagen shares plunge on emissions rigging scandal

Consumer Reports suspends 'recommended' rating for Jetta and Passat diesels

CBC News Posted: Sep 21, 2015 9:00 AM ET Last Updated: Sep 21, 2015 9:00 AM ET

Volkswagen's CEO apologized but investors were not in a forgiving mood as the company's stock plunged almost 20 per cent Monday following revelations late last week that the automaker had rigged emissions tests for almost 500,000 diesel cars in the U.S.

"I personally am deeply sorry that we have broken the trust of our customers and the public," Martin Winterkorn said in a weekend statement.

On Friday, the U.S. Environmental Protection Agency (EPA) revealed that half a million diesel-powered VWs had been programmed to bypass emission controls except during emissions tests. The cars include the Audi A3, VW Jetta, Beetle, Golf and Passat models made in the last seven years.

The EPA ordered VW to fix the cars and VW said it would co-operate with regulators. But the

damage to the automaker's image is nothing less than catastrophic.

VW had marketed its diesel-powered cars as being better for the environment. The Associated Press reports, citing an anonymous source with knowledge of the matter, that VW has told dealers to stop selling its 2015 diesel cars with 2.0-litre engines.

The EPA said the VW cars under investigation seemed to pass emissions tests, but in the real world, were actually emitting up to 40 times the national standard for nitrogen oxide, which is linked to asthma and lung illnesses.

Consumer Reports announced it would remove its "recommended" rating from the Jetta and Passat diesels until it can retest the vehicles.

VW could face fines of up to $18 billion US, according to the EPA.

Volkswagen shares plunged 19.4 per cent in Monday trading in Germany, chopping $21 billion Cdn from the market value of the company.

"The company will have to recall nearly 500,000 affected cars, which will cost it millions of dollars, and that's even before the damage to its brand and potential fines," said Michael Hewson, chief market analyst at CMC Markets.

Diesel-powered models account for about a quarter of VW's sales.

Impact in Canada unclear

At this point, it isn't clear what the revelations mean for owners of VW diesels in Canada. Volkswagen Canada told CBC News on Friday that it first learned of the EPA action earlier that

morning. It said it would co-operate with Environment Canada "to understand the implications for the Canadian market and what actions, if any, may be required in Canada."

Environment Canada, for its part, said it was in talks with the EPA "to further examine this issue and assess potential implications for Canada." Environment Canada also said it collaborates on emissions verification activities with the U.S. EPA "to ensure our common environmental outcomes are achieved," and pointed out that its emissions standards are aligned with U.S. standards.

The EPA and Environment Canada both stressed that the effectiveness of a vehicle's air pollutant control devices is not a safety issue. The cars remain legal to drive.

Volkswagen to Stop Sales of Diesel Cars Involved in Recall

By JACK EWING and CORAL DAVENPORTSEPT. 20, 2015

FRANKFURT — Volkswagen said on Sunday that it would halt sales of cars in the United States equipped with the kind of diesel motors that had led regulators to accuse the German company of illegally installing software to evade standards for reducing smog.

John Schilling, a Volkswagen spokesman, said that the company would stop selling 2015 and 2016 Volkswagen and Audi models equipped with 4-cylinder turbo diesel engines, which the company has marketed as "clean diesel." The company will also stop selling used cars that have the engines, Mr. Schilling said.

He said he did not know how many models would be stuck on dealer lots as a result of the decision. Earlier this month, Volkswagen had said that 23 percent of new cars sold in August in the United States were diesels, or 7,400 vehicles.

The confirmation of the halt in sales came on the same day that Martin Winterkorn, the chief executive of Volkswagen, apologized for conduct that prompted the Environmental Protection Agency to order Volkswagen to recall nearly half a million vehicles.

An employee on the Audi A3 limousine. The recall involves four-cylinder Volkswagen and Audi vehicles from the model years 2009 to 2015. Credit Szilard Koszticsak/European Pressphoto Agency

Volkswagen could face billions of dollars in fines for what the E.P.A. said was a deliberate attempt to evade rules on emissions. The decision to stop sales was first reported by The Wall Street Journal.

"I personally am deeply sorry that we have broken the trust of our customers and the public," Mr. Winterkorn said in a statement.

He said the company would "cooperate fully" with the authorities and order its own independent investigation into the accusations.

In his statement, Mr. Winterkorn did not contest assertions by the E.P.A. that Volkswagen sold cars equipped with software that could detect when periodic state government emissions testing was taking place.

Only during such tests are the cars' full emissions control systems turned on. During normal driving situations, the controls were turned off, allowing the cars to spew as much as 40 times the pollution allowed under the Clean Air Act, the E.P.A. said.

Diesel-driven cars have enjoyed something of a renaissance in recent years, shedding much of their old stigma for being dirty, clanky and sluggish to drive, said Karl Brauer, an analyst at Kelley Blue Book. And in the United States, he said, Volkswagen has clearly led the pack — offering diesel vehicles that performed just like their gasoline counterparts.

"Now, we have to wonder if the technology really advanced as far as we thought at VW," Mr. Brauer said. "They must have had a problem making it work in a way that delivered truly clean diesel. At least clean enough to meet the regulations."

Mr. Brauer said the higher nitrous oxide emissions probably allowed better drivability. Fuel economy also improves with more nitrous emissions, and engines can run cooler, and thus wear out more slowly.

"They must have had a mix of performance, economy and durability that they liked, but realized they couldn't achieve that and still get the emissions," he said.

Diesels in particular are known — and marketed — these days as having tremendous torque, or low-end thrust from a stop. If achieving the required emissions affected the torque, making it anemic, then "drivers are going to scratch their heads, thinking, isn't this why I got a diesel?" Mr. Brauer said.

Volkswagen was going through a difficult period even before the accusations became public on Friday. Mr. Winterkorn recently survived a power struggle with the chairman of Volkswagen's supervisory board, Ferdinand Piëch, a scion of the Porsche family who dominated the company for more than two decades before resigning in April.

Following Mr. Piëch's departure, some analysts have raised questions about whether Mr.

Winterkorn would be strong enough to hold together the sprawling Volkswagen empire, which also includes Audi and Bentley luxury cars, Porsche and Lamborghini sports cars, Scania and MAN heavy trucks, and Ducati motorcycles.

Although Volkswagen recently surpassed Toyota as the world's biggest automaker measured by the number of cars sold, it is significantly less profitable than its Japanese rival and far weaker in the United States market.

A push by Volkswagen to increase sales in the United States, which included building a factory in Chattanooga, Tenn., to produce Passat sedans, has fallen short.

"For Volkswagen, it's a huge scandal," said Ferdinand Dudenhöffer, a professor at the University of Duisburg-Essen, who follows the automobile industry. "The timing is extremely unfortunate."

Professor Dudenhöffer said the case could damage all German automakers, which have tried to build acceptance in the United States for diesel engines, a sector in which they believe they have a technological lead.

Until recently, Professor Dudenhöffer said, the United States applied stricter standards to diesel engines than those applied by European regulators. But the European authorities, concerned about the health effects of diesel pollution, have tightened standards, prompting complaints from the auto industry.

Professor Dudenhöffer said that as a result of the E.P.A. action, Mr. Winterkorn could come under pressure to resign.

"Winterkorn was already damaged," Professor Dudenhöffer said. "Now there is an accusation of illegal behavior. This story is not over."

E.P.A. officials issued the car company a notice of violation and said it had admitted to the use of a so-called defeat device.

The recall involves 4-cylinder Volkswagen and Audi vehicles from the model years 2009 to 2015.

The software was designed to conceal the cars' emission of nitrogen oxide, a pollutant that contributes to the creation of ozone and smog, which are linked to a range of health problems, including asthma attacks, other respiratory diseases and premature death.

Disengaging the pollution controls on a diesel-fueled car can yield better performance, including increased torque and acceleration.

California has issued a separate notice of violation to the company. California, the E.P.A. and the Justice Department are working together on an investigation of the allegations.

Over the next year, E.P.A. officials said, owners of the affected vehicles should expect to receive recall notices from Volkswagen, including information about how to get their cars repaired at no cost to them. The recall covers roughly 482,000 diesel passenger cars sold in the United States since 2009.

Affected diesel models include the 2009-15 Volkswagen Jetta, 2009-15 Beetle, 2009-15 Golf, 2014-15 Passat and 2009-15 Audi A3.

The American investigation could ultimately result in fines or penalties for the company. Under the terms of the Clean Air Act, the Justice Department could impose fines of as much as $37,500 for each recalled vehicle, for a possible total penalty of as much as $18 billion.

The notice of violation came days after the company promoted plans at the Frankfurt International Motor Show to introduce 20 plug-in hybrid or all-electric vehicles by 2020 as part

of a campaign to reduce vehicle emissions.

Mr. Winterkorn said in his statement on Sunday that Volkswagen would "do everything necessary in order to reverse the damage this has caused."

"This matter has first priority for me, personally," he said, "and for our entire board of management."

VW apologises for cheating US car exhaust emissions tests

Andy Sharman in London

The chief executive of Volkswagen has apologised and ordered an external investigation into findings that the carmaker cheated on US emissions tests to make its vehicles appear less polluting.

In a statement on Sunday, Martin Winterkorn, chief executive of the German carmaker, said the board of management took the findings "very seriously".

He added: "I personally am deeply sorry that we have broken the trust of our customers and the public. We will co-operate fully with the responsible agencies, with transparency and urgency, to clearly, openly and completely establish all of the facts of this case."

The Environmental Protection Agency on Friday said diesel variants of several VW and Audi

models sold in the US over six years — including the VW Passat, Beetle and Audi A3 — had been fitted with sophisticated algorithms designed to deceive the laboratory testing regime.

The authorities ordered VW to recall 482,000 cars because of the use of so-called defeat devices — which use software to detect when the car is being tested and runs treatments to reduce nitrogen oxides. Once out on the road, the cars were discovered to produce pollutants up to 40 times the legal limits.

The discovery leaves the German carmaker — which has admitted to using the defeat devices — potentially facing billions of dollars in fines and warranty costs, possible criminal charges for executives and class-action lawsuits from US drivers.

Mr Winterkorn did not say who would be carrying out the external investigation, and the company declined to provide further details.

It was Mr Winterkorn's first formal statement on an issue that also threatens to seriously undermine its attempts to turnround its sputtering performance in the US.

Max Warburton, analyst at Bernstein Research, said: "The best case for VW is probably still a multibillion-dollar fine, pariah status in the US with government — and possibly consumers — [and] damage to its leading position in diesel in the US."

VW now has to initiate a process to fix the cars' emissions systems, though the EPA has said the violations do not present a safety hazard and the vehicles remain legal to drive and resell. Owners of cars of models covering the 2009-2015 period do not need to take any action, the agency said.

I personally am deeply sorry that we have broken the trust of our customers and the public. We will co-operate fully with the responsible agencies, with transparency and urgency, to clearly, openly, and completely establish all of the facts of this case

- Martin Winterkorn, VW chief

In addition to the costs of the recall campaign, VW could theoretically also face fines of up to $37,500 per vehicle — a total of more than $18bn — though analysts have said VW is likely to face a much lower penalty.

The case is a rare but not unique example of this type of manipulation by the motor industry. In 1998, a group of truckmakers including Navistar, Renault and Volvo paid more than $1bn to resolve claims they installed defeat devices on heavy duty diesel engines. These devices allowed an engine to pass the emissions test, but then turn off emission controls when on the road, the EPA said at the time.

The EPA has been active in the past year, securing a record $300m settlement with Hyundai and Kia over claims the Korean affiliates overstated the fuel economy of their cars.

The Guardian:

http://www.theguardian.com/business/2015/sep/20/vw-software-scandal-chief-apologises-for-breaking-public-trust

VW software scandal: chief apologises for breaking public trust

Martin Winterkorn orders external investigation after US regulators found cars gave inaccurate data on toxic emissions

Volkswagen has ordered an external investigation after US regulators found that the carmaker designed software for close to half a million diesel cars that gave false emissions data, its CEO said, adding he was "deeply sorry" for the violation of US rules.

"I personally am deeply sorry that we have broken the trust of our customers and the public," Martin Winterkorn said in a statement published on Sunday by the carmaker on Sunday.

"Volkswagen has ordered an external investigation of this matter."

The US Environmental Protection Agency (EPA) said on Friday the software deceived regulators measuring toxic emissions, adding that Volkswagen could face fines of up to $18bn (£11.5bn) as a result. The carmaker could face penalties of $37,500 for each car not in compliance with clean air rules. The diesel-powered models from 2009-2015 are the VW Jetta, Beetle and Golf, the Passat model from 2014-15, and the Audi A3 from 2009 to 2015.

"We do not and will not tolerate violations of any kind of our internal rules or of the law," said Winterkorn, adding the company was fully co-operating with the relevant agencies. He gave no details on who would carry out the external investigation.

Cynthia Giles, an enforcement officer at the EPA, said on Friday that the cars in question "contained software that turns off emissions controls when driving normally and turns them on when the car is undergoing an emissions test".

"VW was concealing the facts from the EPA, the state of California and from consumers. We expected better from VW," she said. "Using a defeat device in cars to evade clean air standards is illegal and a threat to public health."

The EPA accused Volkswagen of using the device in 482,000 four-cyclinder Volkswagen and Audi diesel cars in the US since 2008. VW must recall all the cars, remove the defeat device and improve the cars' NOx emissions, which creates smog and has been linked to increased asthma attacks and other respiratory illnesses.

The feature, which the EPA called a defeat device, masks the true emissions only during testing and therefore when the cars are on the road they emit as much as 40 times the level of pollutants allowed under clean air rules meant to ensure public health is protected, said Giles.

Volkswagen suspended sales of cars containing the company's four-cylinder turbo direct injection (TDI) engine on Friday in light of the investigation. The "clean diesel" engine is commonly used in models including VW's Beetle, Golf, Jetta, Passat and the A3 luxury compact

made by VW-owned Audi.

Richard Corey, executive officer of the California Air Resources Board (Carb), said on Friday: "Our goal now is to ensure that the affected cars are brought into compliance, to dig more deeply into the extent and implications of Volkswagen's efforts to cheat on clean air rules, and to take appropriate further action."

The EPA and Carb discovered the defeat device software following independent analysis by researchers at West Virginia University, who were promoted into action by the International Council on Clean Technology, an NGO.

When confronted with the EPA and Carb's evidence, VW admitted that its cars were fitted with the defeat device.

The crackdown on Volkswagen comes as the Obama administration is attempting to cut air pollution from an array of sources, including the vehicle industry, power plants and oil and natural-gas providers. The EPA set new carbon rules for big trucks earlier this year and has told all vehicle makers they must sell light vehicles averaging 54.5 miles a gallon by 2025.

In Europe, new laws have forced manufacturers to test their cars under real world conditions and not in laboratories, helping to reduce unrealistic claims about emissions. By 2017 all new cars will have to be more stringently tested, effectively ending an era when car makers could exaggerate the performance of their machines.

UK car industry group the SMMT claims that, because of European legislation to cut tailpipe pollution, Britain's air quality is better now than it has been for centuries.

Volkswagen head apologizes after EPA accusations

By Timothy Cama - 09/20/15 01:28 PM EDT

The head of German automaker Volkswagen Group apologized Sunday after allegations surfaced that his company deliberately tried to evade United States air pollution laws.

Martin Winterkorn, the company's chief executive officer, said he was "deeply sorry" for violating the trust of customers and the public, and said that Volkswagen had ordered an external investigation into the matter.

Volkswagen faces up to $18 billion in fines for the violations under the Clean Air Act, under which the Environmental Protection Agency (EPA) sets air pollution rules for motor vehicles.

"We will cooperate fully with the responsible agencies, with transparency and urgency, to clearly, openly, and completely establish all of the facts of this case," Winterkorn said in a Sunday statement

"We do not and will not tolerate violations of any kind of our internal rules or of the law."

Winterkorn stopped short of admitting to the EPA's allegations.

On Friday, the EPA said it had discovered that about 482,000 diesel vehicles sold by VW and its subsidiary Audi in the United States had "defeat devices" that detect when the vehicle is undergoing an EPA emissions test and turn on equipment that controls output of nitrogen oxides to acceptable levels.

At all other times, the EPA said, the vehicles emitted more pollutants, sometimes exceeding allowable volumes by 40 times.

The agency has not yet officially charged Volkswagen with any civil or criminal penalties, nor did it order any recalls of the affected vehicles. California, which has its own emissions regulations, is also accusing the company of violating air rules.

"We at Volkswagen will do everything that must be done in order to re-establish the trust that so many people have placed in us, and we will do everything necessary in order to reverse the damage this has caused," Winterkorn said, adding that the issue is the top priority for him and the entire management team.

Volkswagen could face $18 billion penalties from EPA

WASHINGTON | BY TIMOTHY GARDNER

Volkswagen AG could face penalties up to $18 billion after being accused of designing software for diesel cars that deceives regulators measuring toxic emissions, the U.S. Environmental Protection Agency said on Friday.

"Put simply, these cars contained software that turns off emissions controls when driving normally and turns them on when the car is undergoing an emissions test," Cynthia Giles, an enforcement officer at the EPA, told reporters in a teleconference.

Volkswagen can face civil penalties of $37,500 for each vehicle not in compliance with federal clean air rules. There are 482,000 four-cylinder VW and Audi diesel cars sold since 2008 involved in the allegations. If each car involved is found to be in noncompliance, the penalty could be $18 billion, an EPA official confirmed on the teleconference.

A U.S. Volkswagen spokesman said the company "is cooperating with the investigation; we are unable to comment further at this time."

The feature in question, which the EPA called a "defeat device," masks the true emissions only during testing and therefore when the cars are on the road they emit as much as 40 times the level of pollutants allowed under clean air rules meant to ensure public health is protected, Giles said.

The EPA accused Volkswagen of using software in four-cylinder Volkswagen and Audi diesel cars from model years 2009 to 2015 made to circumvent emissions testing of certain air pollutants.

The cars are not facing recall at this time, the EPA said.

The diesel-powered vehicles involved from the 2009 to 2015 model years are the VW Jetta, VW Beetle, VW Golf and the Audi A3, as well as the VW Passat from model years 2014 and 2015.

Christian Post:

http://www.christianpost.com/news/volkswagen-to-recall-almost-500000-cars-in-the-us-over-epa-violation-145778/

Volkswagen to recall almost 500,000 cars in the US over EPA violation

BY LORRAINE CABALLERO , CHRISTIAN POST CONTRIBUTOR

Volkswagen will recall almost 500,000 vehicles released from 2009 to 2015 in the United States after the carmaker allegedly violated the law by using illegal software, which helped it go past environmental restrictions.

The Environmental Protection Agency (EPA) said Volkswagen broke the law by installing a "defeat device" in Volkswagen and Audi units with four-cylinder turbo diesel engines released from the year 2009 to 2015. Under normal driving conditions, the emission control devices installed in the said cars worked with reduced efficacy, according to the Dispatch Times.

In the wake of the violation, Volkswagen chief executive Martin Winterkorn delivered a statement apologizing to their customers and vowing to cooperate with EPA's investigation. However, he did not deny the allegations regarding the illegal software, the International Business Times reports.

"I personally am deeply sorry that we have broken the trust of our customers and the public," said Winterkorn in his statement.

Because of the notice of violation from the EPA, Volkswagen is now facing penalties amounting to more than $18 billion, or around $37,500 per unit, based on the U.S.A. federal Clean Air Act. EPA and CARB discovered the illegal software after researchers at the West Virginia University conducted an independent study in cooperation with the global Council on Clean Transportation, the report adds.

Volkswagen has been struggling to sell cars in the United States because of the rising cases of asthma and other respiratory illnesses caused by air pollutants. The diesel vehicles affected by the recall were being counted on to pull up the company's sales in the United States.

Based on the findings of the EPA, Volkswagen had included a certain algorithm in the cars' emissions software that could detect when an emission test is being conducted.

Owners of the diesel cars affected by the recall will be notified by Volkswagen by next year, EPA said. Until Consumer Reports can "retest" the said cars, the recommended rating for the Passat, Jetta, Golf, Beetle, and Audi A3 luxury compact will remain on hold, the report relays.

AP (via Boston Globe):

https://www.bostonglobe.com/business/2015/09/20/chief-sorry-after-epa-says-firm-skirted-clean-air-law/3NNTCf2cVxUI1qYNBfMe7L/story.html

Volkswagen chief apologizes for rigging tests of emissions

By Paul Wiseman and Tom Krisher ASSOCIATED PRESS SEPTEMBER 21, 2015

WASHINGTON — The chief executive of Volkswagen apologized Sunday and VW customers said they felt duped after the Environmental Protection Agency revealed that the German automaker had skirted clean air rules by rigging emissions tests for about 500,000 diesel cars.

''I personally am deeply sorry that we have broken the trust of our customers and the public,'' Volkswagen chief Martin Winterkorn said in a statement. He said VW has ordered an investigation and promised that the company would cooperate with regulators.

On Friday, the EPA said VW used software that allowed its diesel cars to release fewer smog-causing pollutants during tests than in real-world driving conditions.

The cars, built in the last seven years, include the Audi A3, VW Jetta, Beetle, Golf, and Passat models. The agency ordered VW to fix the cars at its own expense. VW also faces fines that could add up to billions of dollars.

VW edged out Toyota to become the world's top-selling automaker in the first half of 2015. But a hit to its reputation from the emissions revelations could hamper its efforts at a sales rebound in the United States. Between 2013 and 2014, VW sales plummeted 10 percent, even as overall industry sales rose 6 percent. US buyers want SUVs, and Volkswagen doesn't have competitive vehicles to offer them.

The magazine Consumer Reports almost immediately suspended its ''recommended'' rating on the Jetta and Passat diesels until it can get recall repairs and retest the cars.

Volkswagen marketed the diesel-powered cars, which account for about 25 percent of its sales, as being better for the environment. After the EPA acted, VW withdrew ads for its diesel cars from Youtube.com and asked dealers to stop selling 2015 diesel cars with 2.0-liter engines, according to a person familiar with the matter.

Some VW customers were furious.

Zeeshan Shah, 39, of Fulton, Md., said that he bought a Volkswagen Diesel Passat 2015 in July after he totaled his Jetta two years ago.

''The selling point" for the Diesel Passat was that the technology was so good, he said. Now, Shah plans to return the car back to the dealer to have it examined and doesn't want to buy another Volkswagen. ''Once they cheat you on this issue, what other issues can they cheat you

on?'' he said. ''You don't trust them.''

John German, senior fellow at the International Council on Clean Transportation, the group that blew the whistle on VW, said it didn't expect to find any violators when it contracted with West Virginia University to test cars with diesel engines.

The council, a research group that helps governments write regulations, did the US tests in an effort to show that automakers were complying with US nitrogen oxide emissions standards, which are stricter than in other countries, he said.

The EPA said VW faces fines of up to $37,500 per vehicle for the violations, a total of more than $18 billion.

Volkswagen Halts U.S. Sales of Certain Diesel Cars

Auto maker also begins external probe after EPA accuses company of dodging emissions rules

By WILLIAM BOSTON, AMY HARDER and MIKE SPECTOR

Updated Sept. 20, 2015 8:57 p.m. ET

Volkswagen AG's crisis over allegedly cheating on U.S. emissions tests deepened, with the German auto maker halting American sales of popular diesel-powered cars and issuing a sweeping apology for violating customers' trust.

It also launched an external investigation. Shares in the company slumped more than 20% in

early trading Monday in response to the crisis.

The company could face billions of dollars in fines and the crisis could further weaken Volkswagen Chief Executive Martin Winterkorn's position. He narrowly survived efforts by a major shareholder to oust him earlier this year and was passed over for the chairman's job, the company's top post, this month.

"I personally am deeply sorry that we have broken the trust of our customers and the public," Mr. Winterkorn said in a statement issued by the company on Sunday, adding that VW is cooperating with authorities and has commissioned an external probe.

The U.S. is crucial in Volkswagen's efforts to become the world's leading auto maker by sales. The German company has built its campaign to grow in the U.S. market on a promise that its clean-diesel engines deliver better performance and low emissions. It is neck-and-neck with reigning sales leader Toyota Motor Corp. and overtook the Japanese car maker during the first half of this year. But the emissions test probes could stall its progress.

Even prior to the emissions issue, the auto maker's namesake Volkswagen brand has been battling declining sales in the U.S. market. And Audi AG, its luxury car maker, is finding it hard to catch up in the U.S. with rivals BMW AG and Daimler AG, which makes Mercedes-Benz vehicles.

On Friday, the U.S. Environmental Protection Agency and the California Air Resources Board alleged that Volkswagen used software, dubbed a "defeat device," in the cars to make diesel-powered engines appear to have lower levels of emissions than they actually did.

About 482,000 Volkswagen diesel-powered cars were affected.

The EPA probe could force Volkswagen and its Audi unit to recall thousands of vehicles that contain the company's "clean diesel" engines. The four-cylinder 2.0-liter turbo direct injection, or TDI, engine is commonly found in Volkswagen's Passat, Jetta, Golf, Beetle and in Audi's A3 luxury compact model.

A Volkswagen spokesman on Sunday said the auto maker halted the sale of all 2015 and 2016 models containing the four-cylinder 2.0 liter TDI engine. The EPA investigation affects cars sold since 2008. The company hasn't issued a recall, the spokesman said.

Realization that Volkswagen may have cheated to get better emissions results could undermine its U.S. recovery and further weaken its shares, which are down 37% from their peak on March 16, said analysts.

"There is no way to put an optimistic spin on this—this is really serious," said Max Warburton, an analyst with Bernstein Research. "The best case for VW is probably still a multi-billion dollar fine."

Consumer Reports, an influential magazine when it comes to car reviews, last week suspended "recommended" ratings on the auto maker's Jetta and Passat diesel-engine models after the EPA disclosed its allegations. Consumer Reports said the recommendations would be suspended until it can retest the vehicles once they are repaired. The magazine said it would then assess whether the cars' fuel economy worsened.

Laurie Cleveland, a 54-year-old English teacher from Lowville, N.Y., said she bought a new 2015 VW Passat TDI over the Labor Day weekend. She isn't sure what to do now. She said it is her fourth Volkswagen diesel car since 2006.

"I feel like I've been deceived," she said. "I'm a person who likes to be environmentally friendly," she added.

Mr. Winterkorn on Sunday vowed to do "everything necessary" to regain public trust in the company.

"We do not and will not tolerate violation of any kind of our internal rules or of the law," he said. "This matter has first priority for me."

U.S. officials said Volkswagen violated two parts of the federal Clean Air Act and could face fines of as much as $37,500 per car, or more than $18 billion. It remained unclear whether the government would seek such an onerous penalty.

The EPA in November 2014 hit South Korean auto makers Hyundai Motor Co. and Kia Motors Corp. with a record $100 million penalty for overstating fuel-economy claims and forced the companies to cough up another $200 million in regulatory credits.

The EPA has said the vehicles remain safe and legal to drive. The agency is working with the Justice Department and an investigation is continuing.

Officials alleged that Volkswagen used software that activates full emissions controls only during testing but then reduces their effectiveness during normal driving. The result is that cars can emit nitrogen oxides at up to 40 times the allowable standard, the agency said. Diesel-powered cars are a small part of overall U.S. car and light-truck sales.

Experts say that the software enables cars to get better fuel economy at the expense of higher nitrogen-oxide emissions, which was likely one reason VW was using them, according to Margo Oge, who recently retired as director of the EPA's Office of Transportation and Air Quality after more than 30 years at the agency.

Volkswagen's apparent motivations on the emissions tests were unclear. An EPA spokeswoman has said it would be "premature to speculate on why VW did this."

A Volkswagen spokesman in Wolfsburg, Germany, on Sunday said, "We are now in the investigation phase and have no comment beyond what is in the statement that we published

today."

California is separately investigating the auto maker.

The International Council on Clean Transportation, a nonprofit research organization that works with governments to cut air pollution from mobile sources, and West Virginia University researchers uncovered Volkswagen's alleged use of defeat devices in research and testing over the last couple of years.

Volkswagen to halt U.S. sales of some 2015 diesel cars

FRANKFURT/HAMBURG | BY CHRISTOPH STEITZ AND JAN SCHWARTZ

Volkswagen (VOWG_p.DE) told U.S. dealers to halt sales of some 2015 diesel cars after regulators found software it designed for the affected vehicles gave false emissions data, the company said Sunday, announcing it had launched an investigation.

In a statement published by the carmaker on Sunday, Chief Executive Officer Martin Winterkorn said, "I personally am deeply sorry that we have broken the trust of our customers.

"Volkswagen has ordered an external investigation of this matter," he said.

The U.S. Environmental Protection Agency (EPA) said on Friday the software deceived regulators measuring toxic emissions, adding that Volkswagen could face fines of up to $18

billion as a result.

The Detroit News reported late Friday that VW dealers still had some 2015 diesel Jetta, Passat and Beetle cars for sale.

A VW representative on Sunday confirmed the partial halt of sales of the affected vehicles but did not give any numbers.

Winterkorn said, "We do not and will not tolerate violations of any kind of our internal rules or of the law," adding that the company was fully cooperating with the relevant agencies.

He gave no details on who would carry out the external investigation.

"This is not your usual recall issue, an error in calibration or even a serious safety flaw," Bernstein analysts wrote in a note on Sunday. "There is no way to put an optimistic spin on this - this is really serious."

Cynthia Giles, an enforcement officer at the EPA, said on Friday the cars in question "contained software that turns off emissions controls when driving normally and turns them on when the car is undergoing an emissions test".

The feature, which the EPA called a "defeat device," masks the true emissions only during testing. When the cars are on the road, they emit as much as 40 times the level of pollutants allowed under clean air rules meant to ensure public health is protected, Giles said.

"We have admitted to it to the regulator. It is true. We are actively cooperating with the regulator," a Volkswagen spokesman said on Sunday.

Volkswagen could face civil penalties of $37,500 for each vehicle not in compliance with federal clean air rules. Some 482,000 four-cylinder VW and Audi diesel cars sold since 2008 are involved in the allegations.

If each car involved is found to be in noncompliance, the penalty could be $18 billion, an EPA official confirmed during the telephone conference on Friday.

Volkswagen peer Daimler, meanwhile, signaled it may not be subject to the same violation.

"I have a rough idea of what is happening and that it does not apply to us," Daimler Chief Executive Dieter Zetsche said on Sunday at an event in Hamburg.

"But it is much too early to make a final statement on this," he added.

USA Today:

http://www.usatoday.com/story/money/cars/2015/09/20/volkswagen-ceo-martin-winterkorn-apologizes-epa-clean-air-act-emissions-violations/72519678/

Volkswagen issues sales halt; CEO apologizes on emissions cheating

Nathan Bomey, USA TODAY 8:02 a.m. EDT September 21, 2015

Volkswagen has admitted cheating U.S. diesel emissions tests, sending company shares plunging as much as 23 percent in Frankfurt and potentially leaving the company open to billions of dollars in fines. Bloomberg

Martin Winterkorn ordered an external investigation after the EPA disclosed the violations.

Volkswagen's CEO said he is "deeply sorry" for violating U.S. emissions standards and ordered an external investigation Sunday, two days after the Environmental Protection Agency (EPA) accused the automaker of purposefully manipulating emissions tests for almost 500,000 vehicles.

The German automaker ordered its U.S. dealerships to stop selling cars impacted by the probe until its engineers can deliver a fix.

The EPA accused Volkswagen of installing software on 482,000 diesel cars in the USA that allowed it to cheat emissions tests, potentially exposing people to harmful pollutants at levels of 40 times the acceptable standard and respiratory conditions such as asthma.

"I personally am deeply sorry that we have broken the trust of our customers and the public," Martin Winterkorn, Volkswagen's CEO, said in a statement. "We will cooperate fully with the responsible agencies, with transparency and urgency, to clearly, openly and completely establish all of the facts of this case." Winterkorn pledged to regain the public's trust.

The violations could expose Volkswagen — the world's largest vehicle manufacturer through the first six months of 2015 — to up to $18 billion in federal fines if the EPA assesses the maximum possible penalty of $37,500 per vehicle.

The violations could invite charges of false marketing by regulators, a vehicle recall and payment to car owners, either voluntarily or through lawsuits. Volkswagen advertised the cars under the "Clean Diesel" moniker.

The state of California is investigating the emissions violations.

"We do not and will not tolerate violations of any kind of our internal rules or of the law," Winterkorn said. The company's board takes the allegations "very seriously," he said.

The EPA accused the German automaker of adopting what it called a "defeat device" to trick U.S. regulators into believing its cars met Clean Air Act standards for nitrogen oxides. Volkswagen admitted to investigators it had installed the defeat device, the EPA said.

The EPA said impacted cars include the 2009 to 2014 Volkswagen Jetta, Beetle and Golf, the 2014 and 2015 Volkswagen Passat and the 2009 to 2015 Audi A3.

Volkswagen told dealers they cannot sell the 4-cylinder diesel versions of those cars until a fix is available, Volkswagen spokesman Mario Guerreiro said Sunday.

The sales halt could put a significant dent in the company's September sales performance. About 20% of Volkswagen's vehicle sales are diesel engines, said AutoPacific analyst Dave Sullivan.

"It totally goes against all of the marketing they have had of a clean diesel," Sullivan said of the violations. "That's one of the biggest selling points for Volkswagen."

"The trust of our customers and the public is and continues to be our most important asset," Winterkorn said Sunday. "We at Volkswagen will do everything that must be done in order to re-establish the trust that so many people have placed in us, and we will do everything necessary in order to reverse the damage this has caused. This matter has first priority for me, personally, and for our entire Board of Management."

Regulators order Volkswagen recalls over device used to trick smog tests

BY DALE KASLER

In a joint probe with California air regulators, the federal government Friday told Volkswagen to recall 480,000 diesel-fuel cars, charging the automaker with equipping the cars with software designed to circumvent pollution limits.

The U.S. Environmental Protection Agency and California Air Resources Board sent notices to the German automaker over its alleged use of something called a "defeat device," a piece of software that controls emissions during smog tests but not when the vehicles are actually on the road.

"Using a defeat device in cars to evade clean air standards is illegal and a threat to public health," said Cynthia Giles, assistant EPA administrator, in a prepared statement. "Working closely with the California Air Resources Board, EPA is committed to making sure that all automakers play by the same rules."

The EPA sent Volkswagen a "notice of violation" and told car owners they can expect a recall notice. The agency said all repairs will be done at Volkswagen's expense. It added that the cars are safe to drive. The EPA has the authority to order automotive recalls.

Stanley Young, a spokesman for the ARB, said the federal and state agencies were first notified of the problem by independent researchers at West Virginia University and the International Council on Clean Transportation. Months of followup testing, including tests at an ARB lab in El Monte, confirmed the analyses.

Volkswagen officials in early September "admitted to CARB and EPA staff that these vehicles were designed and manufactured with a defeat device," according to an enforcement letter the

California agency sent Friday to Volkswagen officials.

Young said "our major goal is to ensure that these cars come into compliance, that they're the same in the real world as they are on the test bench." The automaker eventually could face fines or other enforcement actions, he said.

The agencies plan to "dig more deeply into the extent and implications of Volkswagen's efforts to cheat on clean air rules, and to take appropriate further action," said Richard Corey, executive officer of ARB, in a prepared statement.

The EPA said the recall affects VW Jettas, Beetles, Golfs and Audi A3s made in the 2009 to 2015 model years. It also covers VW Passats made in the 2014 and 2015 model years. Only diesel cars are affected. Young said ARB believes there are as many as 50,000 affected vehicles on the road in California.

Under the federal Clean Air Act, California has the authority to set its own regulatory standards for car emissions.

Volkswagen of America spokesman Darryll Harrison Jr. said the company is cooperating with the federal and state agencies but had no further comment.

The Atlantic:

http://www.theatlantic.com/technology/archive/2015/09/volkswagens-game-of-make-belief/406159/

Volkswagen's Game of Make-Believe

The company inserted a device into almost 500,000 cars meant to trick emissions testing, the EPA says.

ROBINSON MEYER

One of the great lessons of the pioneering computer scientist Alan Turing is this: Computers are only pretending machines. Software is always just imitating something else.

Volkswagen seems to have taken this maxim to new heights. The Environmental Protection Agency alleges that the company installed "defeat devices" in its four-cylinder Volkswagen and Audi-brand diesel cars from 2009 to 2015.

These devices, essentially, let the cars pretend to not break the law. The software could sense when the car was undergoing emissions testing and activate its pollution-control systems accordingly. When the car was being driven during normal use, these systems largely did not activate—making the car a much heavier polluter in real-life than it looked on paper.

With those systems deactivated, the car's emissions violated the Clean Air Act and California's state pollution-control regulation.

"Using a defeat device in cars to evade clean-air standards is illegal and a threat to public health," said Cynthia Giles, assistant administrator for the EPA's Office of Enforcement and Compliance Assurance, in a statement.

There are almost 500,000 vehicles on American roads with the devices installed, according to the EPA. Volkswagen must now pay to repair the emissions systems in affected cars. The government may also fine the company as much as $18 billion.

The device was discovered by researchers at West Virginia University, who notified the EPA and California state authorities. The two authorities investigated further, and after demanding "an explanation for the identified emission problems, Volkswagen admitted that the cars contained defeat devices," said a statement from the agency.

I reached out to Volkswagen for comment and haven't heard back yet. The Times reports that the company is complying with investigations.

Volkswagen urged to recall cars for allegedly cheating emissions test

BY CHRIS PERKINS

Automakers are under intense pressure to meet emissions regulations put in place by the world's governments. Volkswagen allegedly had a slightly different solution.

The U.S. Environmental Protection Agency (EPA) ordered a recall of almost 500,000 Volkswagen and Audi vehicles equipped with four-cylinder diesel engines, for software designed to sidestep emissions regulations, reports the New York Times.

In total, 482,000 vehicles are being implicated, including the 2009-2015 Volkswagen Golf,

Beetle, Jetta and Beetle, the 2014-2015 Volkswagen Passat and the 2009-2015 Audi A3. The cars were possibly installed with a "defeat device," a piece of software designed to detect when the car is undergoing emissions testing and turn on all of the car's emissions control systems then. In normal driving, the systems would turn off, causing 40 times larger nitrogen oxide emissions, according to the E.P.A.

Nitrogen oxide is a major contributor to smog, which can lead to increased respiratory problems and premature death.

The installation of this software is in violation of the Clean Air Act, and as such, the E.P.A, the State of California and the Department of Justice will launch an investigation. The installation of this software is in violation of the Clean Air Act, and as such, the E.P.A, the State of California and the Department of Justice will launch an investigation.

U.S. regulators hope that this recall will send a message to automakers to not develop software to skirt regulations. Last November, Hyundai and Kia were fined $100 million for violating the Clean Air Act. The two companies inflated their fuel economy figures for their 2012 vehicles.

The likely reason why Volkswagen could go the trouble to develop and use software like this is to boost performance; emissions control equipment tends to suck power out of an engine.

Researchers from West Virginia University, working with the International Council on Clean Transportation, discovered the software, according to the EPA's press release.

"Volkswagen Group of America, Inc., Volkswagen AG and Audi AG received today notice from the US Environmental Protection Agency, US Department of Justice and the California Air Resources Board of an investigation related to certain emissions compliance matters. VW is cooperating with the investigation; we are unable to comment further at this time," said a representative for Volkswagen.

A representative for the EPA wasn't immediately available for comment.

It's unclear if this issue only pertains to U.S. model Volkswagens and Audis equipped with four-cylinder diesels, or their world-market counterparts as well.

A report from Jalopnik notes that all of Volkswagen's ads for its diesel models have been deleted from YouTube, apparently at the company's request.

Why the EPA is forcing Volkswagen to recall nearly 500,000 cars

Volkswagen AG, the German car manufacturer, is under investigation by California and US emissions regulators for allegedly circumventing emission tests with a new device.

By Corey Fedde, Staff SEPTEMBER 18, 2015

Volkswagen AG is under investigation for circumventing clean air rules.

German automotive company Volkswagen AG is under investigation by California and US environmental regulators. The US Environmental Protection Agency told Reuters Volkswagen allegedly used software to circumvent emissions testing of specific air pollutants.

"Put simply, these cars contained software that turns off emissions controls when driving normally and turns them on when the car is undergoing an emissions test," Cynthia Giles, an EPA enforcement officer, told Reuters via teleconference.

The feature, known as a "defeat device," is allegedly present in 4 cylinder Volkswagen and Audi vehicles from 2009-2015, which total nearly 500,000 vehicles. The device is programmed to detect when the car is undergoing an emissions test and turn on the full emissions controls. The device then turns the emission controls off during normal driving. The result being far more pollution than the company reported, the EPA told The New York Times.

The pollutant the "defeat device" is designed to conceal, nitrogen oxide, has been linked by public health officials to variety of health problems, including asthma.

The 500,000 diesel vehicle models affected include 2009-2015 Volkswagen Jettas, Beetles, Golfs, Passats, and Audi A3s.

The violation and investigation belie a growing trend in more aggressive environmental enforcement from federal regulators. In November 2014, the administration announced its largest ever penalty for a violation of the Clean Air Act on Korean automakers Hyundai Motor and Kia Motors. The fine involved a $300 million settlement for overstating vehicle fuel-economy standards on more than 1 million cars.

According to The New York Times, analysts say the crackdown is meant to send a clear message to automakers that circumventing federal rules will not be tolerated.

California, the EPA, and the Justice Department are working together on the investigation.

"Using a defeat device in cars to evade clean air standards is illegal and a threat to public health. Working closely with the California Air Resources Board, EPA is committed to making sure that

all automakers play by the same rules. E.P.A. will continue to investigate these very serious violations," Ms. Giles told the Times.

This report includes material from Reuters.

Volkswagen could face $18 billion penalties from EPA

WASHINGTON | BY TIMOTHY GARDNER

Volkswagen AG (VOWG_p.DE) could face penalties up to $18 billion after being accused of designing software for diesel cars that deceives regulators measuring toxic emissions, the U.S. Environmental Protection Agency said on Friday.

"Put simply, these cars contained software that turns off emissions controls when driving normally and turns them on when the car is undergoing an emissions test," Cynthia Giles, an enforcement officer at the EPA, told reporters in a teleconference.

Volkswagen can face civil penalties of $37,500 for each vehicle not in compliance with federal clean air rules. There are 482,000 four-cylinder VW and Audi diesel cars sold since 2008 involved in the allegations. If each car involved is found to be in noncompliance, the penalty could be $18 billion, an EPA official confirmed on the teleconference.

A U.S. Volkswagen spokesman said the company "is cooperating with the investigation; we are unable to comment further at this time."

The feature in question, which the EPA called a "defeat device," masks the true emissions only during testing and therefore when the cars are on the road they emit as much as 40 times the level of pollutants allowed under clean air rules meant to ensure public health is protected, Giles said.

The EPA accused Volkswagen of using software in four-cylinder Volkswagen and Audi diesel cars from model years 2009 to 2015 made to circumvent emissions testing of certain air pollutants.

The cars are not facing recall at this time, the EPA said.

The diesel-powered vehicles involved from the 2009 to 2015 model years are the VW Jetta, VW Beetle, VW Golf and the Audi A3, as well as the VW Passat from model years 2014 and 2015.

Feds accuse VW of going around federal emissions standards

By Devin Henry - 09/18/15 12:50 PM EDT

The Environmental Protection Agency (EPA) is accusing Volkswagen of looking to circumvent federal air pollutant emission standards for the last six years.

EPA officials alleged Friday that about 482,000 VW vehicles sold since 2008 violate the Clean Air Act due to software installed on the vehicles that turns off required air pollution protections.

Janet McCabe, an acting assistant administrator, said the EPA "intends to hold VW responsible to recall the vehicles" and fix the emissions problem. The company could face up to an $18 billion fine for the violations.

The EPA issued VW a Clean Air Act violation notice Friday, alleging it used a software algorithm on certain vehicles that would turn on emission controls only when they undergo official emissions testing.

This "defeat device," the EPA said, would switch off those controls during normal operation, which means the vehicles could emit up to 40 times the amount of nitrogen oxide allowed under federal air pollution standards.

"These violations are very serious … not only because they result in excess emissions, but also because VW was concealing the fact from EPA, the state of California and from consumers," Assistant Administrator Cynthia Giles said. "We expected better from VW."

Federal law requires manufacturers to certify to the EPA that their cars meet emissions standards before selling their vehicles in the U.S. Cars with defeat devices cannot be certified, the EPA said.

A VW statement said only that the company had received the violation notice and is cooperating with the investigation.

The EPA and the California Air Resources Board discovered the defeat device during an analysis at West Virginia State University, the EPA said. Officials said their investigation into the incident is ongoing and wouldn't give many more details about how it developed or what the outcome might be.

The agency is not ordering a recall or announcing penalties at the moment, and officials said the cars are safe and legal to drive. The Friday announcement, Giles said, was meant to "inform the public right away and to put VW on notice of our continuing investigation."

The EPA said the announcement covers VW Jettas, Beetles, Golfs and Audi A3s with model years between 2009 and 2015, as well as the VW Passat with model years 2014 and 2015.

Volkswagen ordered to recall almost a half-million cars over emissions trick

by Benjamin Snyder

The Environmental Protection Agency is ordering Volkswagen to recall nearly a half-million cars after the company allegedly used a computer software trick to make the cars seem more environmentally friendly during state emissions tests.

The VW models involved include the diesel versions of the following models: The 2009-15 Volkswagen Jetta, the 2009–15 Beetle, the 2009–15 Golf, the 2014-15 Passat and the 2009-15 Audi A3. The recall affects 482,000 vehicles in total.

"Using a defeat device in cars to evade clean air standards is illegal and a threat to public health," said Cynthia Giles, Assistant Administrator for the Office of Enforcement and Compliance Assurance, in a statement. "Working closely with the California Air Resources Board, EPA is committed to making sure that all automakers play by the same rules. EPA will continue to investigate these very serious matters."

"Volkswagen Group of America, Inc., Volkswagen AG and Audi AG received today notice from the US Environmental Protection Agency, US Department of Justice and the California Air Resources Board of an investigation related to certain emissions compliance matters," Volkswagen says. "VW is cooperating with the investigation; we are unable to comment further at this time."

Volkswagen Used Illegal Software to Cheat Emissions Tests: EPA

By Stephen Elmer Sep 18, 2015

Volkswagen may be forced to recall almost 500,000 diesel passenger cars after an investigation revealed illegal software was allowing the vehicles to pass government emissions standards.

A software algorithm, known as a defeat device, used on roughly 482,000 Volkswagen vehicles with four-cylinder diesel engines is able to detect when the car is undergoing official emissions testing, and will activate full emissions controls only during the test.

The EPA says that this results in cars that meet emissions standards while being tested, but emit

40 percent more nitrogen oxides while driving.

Independent analysis at West Virginia University uncovered the defeat devices. After being questioned by the EPA and CARB, Volkswagen admitted that its cars did contain defeat devices.

The EPA says "it is incumbent" on Volkswagen to initiate a recall fix for all the affected cars, although they note that these vehicles are still safe to drive and do not present a safety hazard at this time.

Volkswagen may be liable for civil penalties over the findings, which could total up to $18 billion if the EPA leverages its maximum find of $37,500 per vehicles.

"Using a defeat device in cars to evade clean air standards is illegal and a threat to public health," said Cynthia Giles, Assistant Administrator for the Office of Enforcement and Compliance Assurance. "Working closely with the California Air Resources Board, EPA is committed to making sure that all automakers play by the same rules. EPA will continue to investigate these very serious matters."

Models affected by the issue include the 2009-2015 Volkswagen Jetta, Beetle and Gold. The 2009-2015 Audi A3 is also affected, along with the 2014-2015 Passat.

Volkswagen acknowledged that it has received notice of the investigation. "VW is cooperating with the investigation; we are unable to comment further at this time," said the brand.

EPA: Volkswagen used 'defeat device' to circumvent air pollution controls

By Joby Warrick September 18 at 1:04 PM

The Environmental Protection Agency on Friday accused Volkswagen of installing a software "defeat device" that circumvented pollution controls on nearly a half-million Volkswagens and Audis.

The regulatory agency filed a notice of violation against the German automaker, saying the company deliberately cheated on clean-air rules by installing the software of five of its models since 2008. An EPA statement warned of possible civil penalties and hinted of a future possible recall, saying it was "incumbent on Volkswagen to initiate the process" to fix the affected cars' emissions systems.

"Using a defeat device in cars to evade clean air standards is illegal and a threat to public health," said Cynthia Giles, the EPA's assistant administrator for EPA's Office of Enforcement and Compliance Assurance.

EPA officials, in a joint probe with California's regulatory agency, determined that Volkswagen had inserted a sophisticated algorithm in the cars' emissions software that could detect when a vehicle was undergoing emissions testing. The software, which the EPA called a "defeat device," would turn on full emissions controls during testing, and switch them off again under normal driving conditions.

As a result, the cars emitted far more pollution–up to 40 times the federal standard for the pollutant known as NOx, a component in urban smog, the EPA said.

The software was installed in Volkwagen's Golfs, Jettas and Beetles and Audi A3s beginning in the model year 2009, and in Volkswagen's Passat models beginning in 2014. EPA officials said no action was required by owners of the car, but they suggested that Volkswagen would be compelled to address the problem.

"Our goal now is to ensure that the affected cars are brought into compliance, said Richard Corey, the executive officer for California's Air Resources Board." He said federal and state agencies intended to "dig more deeply into the extent and implications of Volkswagen's efforts to cheat on clean air rules, and to take appropriate further action."

EPA Accuses Volkswagen of Dodging Emissions Rules

Agency says German auto maker circumvented air-pollution standards with software

By AMY HARDER

WASHINGTON—The U.S. Environmental Protection Agency issued a notice on Friday alleging that Volkswagen AG circumvented air-pollution standards with software installed on nearly a half million cars sold in the U.S. since 2008.

Officials said Volkswagen could face penalties of up to $37,500 per vehicle, or a total of more than $18 billion, though it remained unclear whether the government would eventually levy such

a large penalty. Officials said the German auto maker violated the federal Clean Air Act.

The agency said that owners of these cars don't need to take any action right now and that while the cars have emissions exceeding federal standards, "these violations do not present a safety hazard and the cars remain legal to drive," according to the EPA.

Officials said a recall hasn't been announced and an investigation continues. They plan to at some point order Volkswagen to fix the vehicles, officials said.

Top EPA officials made the announcement alongside the California Air Resources Board, which is separately investigating the alleged use of the software, which EPA describes as a "defeat device." The software reduces the effectiveness of a car's emission control system during normal driving conditions and enables the car to emit nitrogen oxides at up to 40 times the allowable standard, according to the EPA.

"Using a defeat device in cars to evade clean air standards is illegal and a threat to public health," said Cynthia Giles, Assistant Administrator for the Office of Enforcement and Compliance at the EPA.

"Volkswagen Group of America Inc., Volkswagen AG and Audi AG received today notice from the U.S. Environmental Protection Agency, U.S. Department of Justice and the California Air Resources Board of an investigation related to certain emissions compliance matters," Volkswagen said in a statement. "VW is cooperating with the investigation; we are unable to comment further at this time."

EPA said that its allegations cover roughly 482,000 diesel passenger cars with model years between 2009 and 2015 and sold in the U.S. since 2008. They include the following models: the Jetta, Beetle, Audi A3, Golf and Passat.

The Clean Air Act requires vehicle manufacturers to certify to EPA that their products meet federal air-pollution standards. EPA said Friday that by making and selling vehicles with the "defeat device" software, Volkswagen was violating two parts of the Clean Air Act.

Volkswagen Used 'Defeat Device' To Skirt Emissions Rules, EPA Says

BILL CHAPPELL

Saying Volkswagen violated the Clean Air Act, the Environmental Protection Agency says the company's diesel-powered cars have sophisticated software that detects emissions testing – and "turns full emissions controls on only during the test."

Installed on four-cylinder cars, the software, which the EPA calls a "defeat device" that's meant to trick official tests, allowed diesel Jettas, Beetles, and other cars to "emit up to 40 times more pollution" than allowed under U.S. emission standards.

The agency says that after the carmaker was confronted with emission test results this month, it admitted that the cars contain defeat devices.

Volkswagen must now fix the cars' emissions control systems, the agency says, adding that Volkswagen could be liable for civil penalties and other punishment. The cars in question are popular Volkswagen and Audi models that were made from 2009 to this year.

The affected diesel cars include:

• Jetta (Model Years 2009 – 2015)

• Beetle (Model Years 2009 – 2015)

• Audi A3 (Model Years 2009 – 2015)

• Golf (Model Years 2009 – 2015)

• Passat (Model Years 2014-2015)

"Using a defeat device in cars to evade clean air standards is illegal and a threat to public health," said Cynthia Giles, assistant administrator for the Office of Enforcement and Compliance Assurance.

The Verge:

http://www.theverge.com/2015/9/18/9352757/epa-volkswagen-recall-emissions

Volkswagen ordered to recall 500,000 cars for gaming emissions testing

By Colin Lecher

The federal government has ordered Volkswagen to recall almost 500,000 vehicles, saying the company unlawfully used special software to get around missions regulations.

VOLKSWAGEN ALLEGEDLY USED A "DEFEAT DEVICE."

Volkswagen allegedly used a so-called "defeat device" on certain models made in the past six years. The device works by only turning on emissions control when undergoing emissions testing, but not when the car is actually being driven normally and pollution is at its peak. "This results in cars that meet emissions standards in the laboratory or testing station, but during normal operation, emit nitrogen oxides, or NOx, at up to 40 times the standard," the EPA said in a statement.

Using such a device is a violation of the Clean Air Act, which, as The New York Times points out, the EPA has been increasingly cracking down on. In November, the agency hit Hyundai and Kia with a record $100 million fine for violations under the act.

The cars affected by the recall include the 2009 to 2015 Jetta, Beetle, Golf, and Audi A3. The 2014 and 2015 Passat is also included. According to the EPA, that adds up to 482,000 cars.

Jalopnik:

http://jalopnik.com/epa-orders-volkswagen-to-recall-482-000-diesel-cars-for-1731665972

EPA Orders Volkswagen To Recall 482,000 Diesel Cars For Cheating On Emissions

Patrick George

The New York Times reports Volkswagen has been ordered by the Environmental Protection Agency to recall 482,000 diesel cars in the U.S. over software they say was intentionally designed to circumvent smog regulations.

The cars, all diesels from 2009 to 2015, have a “defeat device” programmed to detect when the car is undergoing official emissions testing that only then turns on the full emissions control systems, the Times reports.

These controls are turned off in other situations, leading to far greater emissions than VW let on — which is against the law. The devices were designed to conceal nitrogen oxide emissions.

It's not immediately clear why VW had such a system on these cars, how the system detected official testing versus normal driving, or if the cars operated differently in normal driving when the defeat device was off. What effect did reducing NOx emissions have on fuel economy or performance?

"Using a defeat device in cars to evade clean air standards is illegal and a threat to public health," said Cynthia Giles, the E.P.A.'s assistant administrator for the Office of Enforcement and Compliance. "Working closely with the California Air Resources Board, E.P.A. is committed to making sure that all automakers play by the same rules. E.P.A. will continue to investigate these very serious violations."

The state of California and the Justice Department are also investigating the violation, the paper reports.

The vehicles affected are the 2009-2015 diesel Jetta, Beetle, Golf, Passat and Audi A3.

More on this as we get it.

EPA: Volkswagen used software to skirt emissions rules

By Greg Gardner

The U.S. Environmental Protection Agency and California are accusing Volkswagen of violating the Clean Air Act by using software that allows hundred of thousands of VW and Audi diesel-powered cars to get around emission standards.

"Using a defeat device in cars to evade clean air standards is illegal and a threat to public health," said Cynthia Giles, EPA assistant administrator for enforcement and compliance assurance. "Working closely with the California Air Resources Board, EPA is committed to making sure that all automakers play by the same rules. EPA will continue to investigate these very serious matters."

The agency's notice of violation covers about 482,000 diesel cars sold between 2009 and 2015 model years.

Affected diesel models include:

Jetta (model years 2009 – 2015)

Beetle (model years 2009 – 2015)

Audi A3 (model years 2009 – 2015)

Golf (model years 2009 – 2015)

Passat (model years 2014-2015)

California is separately issuing an In-Use Compliance letter to Volkswagen, and EPA and the California Air Resources Board (CARB) have both initiated investigations based on Volkswagen's alleged actions.

"Working with U.S. EPA we are taking this important step to protect public health thanks to the dogged investigations by our laboratory scientists and staff," said CARB executive officer Richard Corey. "Our goal is to ensure that the affected cars are brought into compliance, to dig more deeply into the extent and implications of Volkswagen's efforts to cheat on clean air rules, and to take appropriate further action."

The federal and California regulators say Volkswagen used a sophisticated software algorithm on certain Volkswagen vehicles that detects when the car is undergoing official emissions testing and turns full emissions controls on only during the test. The effectiveness of these vehicles' pollution emissions control devices is greatly reduced during all normal driving situations.

As a result the cars met emissions standards in the laboratory or testing station, but during normal operation, emit nitrogen oxides, or NOx, at up to 40 times the permissible standard. The software produced by Volkswagen is a "defeat device," as defined by the Clean Air Act.

Corey said testing groups in Europe found information that indicated Volkswagen may have manipulated its emission tests and told California regulators about their suspicions.

NOx pollution contributes to nitrogen dioxide, ground-level ozone and fine particulate matter. Exposure to these pollutants has been linked with a range of serious health effects, including increased asthma attacks and other respiratory illnesses that can be serious enough to send people to the hospital. Exposure to ozone and particulate matter have also been associated with premature death due to respiratory-related or cardiovascular-related effects. Children, elderly people and those with pre-existing respiratory disease are particularly at risk for health effects of these pollutants.

The Clean Air Act requires vehicle manufacturers to certify to EPA that their products will meet applicable federal emission standards to control air pollution, and every vehicle sold in the U.S. must be covered by an EPA-issued certificate of conformity. Motor vehicles equipped with defeat devices, which reduce the effectiveness of the emission control system during normal driving conditions, cannot be certified. By making and selling vehicles with defeat devices that allowed for higher levels of air emissions than were certified to EPA, Volkswagen violated two important provisions of the Clean Air Act.

EPA and CARB uncovered the defeat device software after independent analysis by researchers at West Virginia University, working with the International Council on Clean Transportation, a non-governmental organization. The researchers raised questions about emissions levels, and the agencies began further investigations into the issue. In September, after EPA and CARB demanded an explanation for the emission problems, Volkswagen admitted that the cars contained defeat devices.

VW may be liable for civil penalties of up to $37,500 per vehicle found to be violating the standard, or potentially more than $18 billion.

It is incumbent upon Volkswagen to initiate the process that will fix the cars' emissions systems. Car owners should know that although these vehicles have emissions exceeding standards, these violations do not present a safety hazard and the cars remain legal to drive and resell. Owners of cars of these models and years do not need to take any action at this time.

Wired:

http://www.wired.com/2015/09/epa-accuses-volkswagen-cheating-emissions-testing-482000-cars/

EPA ACCUSES VOLKSWAGEN OF CHEATING EMISSIONS TESTING ON 482,000 CARS

Alex Davies

THE EPA IS accusing Volkswagen of illegally using software to cheat emissions standards, allowing the German automaker to sell half a million cars that produce smog at 40 times the legal limit.

In a notice of violation of the Clean Air Act sent to Volkswagen AG, Audi AG, and Volkswagen Group of America, Inc today, the EPA said diesel-powered VW cars used a "defeat device," a kind of "a sophisticated software algorithm [that] detects when the car is undergoing official emissions testing, and turns full emissions controls on only during the test. The effectiveness of these vehicles' pollution emissions control devices is greatly reduced during all normal driving situations."

The accusation applies to 482,000 diesel-powered, four-cyclinder Jetta, Beetle, Audi A3, Golf, and Passat cars sold between 2008 and 2015 in the US. The news comes as the Frankfurt motor show, one of the biggest events of the year for the automaker, opens to the press. VW will be required to fix the problem, at no cost to car owners.

The Week:

http://www.theweek.com/speedreads/578080/epa-catches-volkswagen-blatantly-cheating-smog-tests

EPA catches Volkswagen blatantly cheating on smog tests

Jeva Lange

Almost half a million Volkswagen cars, including recent diesel models of Jettas, Beetles, Audi A3s, Golfs, and Passats, may be recalled in an enormous crackdown on the German carmaker's alleged blatant circumvention of smog standards, The New York Times reports.

The Environmental Protection Agency has demanded that the cars be recalled, and specifically accused Volkswagen of installing software, called a "defeat device," in their cars that basically just lies about what a car's emissions are during tests:

The device is programmed to detect when the car is undergoing official emissions testing, and to only turn on full emissions control systems during that testing. Those controls are turned off during normal driving situations, when the vehicles pollute far more heavily than reported by the

manufacturer, the E.P.A. said. [The New York Times]

Car emissions contain nitrogen oxide, which creates smog, as well as pollutants that cause asthma.

Volkswagen is accused of sidestepping emissions rules, 'cheating' pollution tests

By JERRY HIRSCH

Federal and California environmental regulators accused Volkswagen of using software that "cheats" pollution testing in nearly 500,000 recent model VWs and Audis by circumventing emission standards in its diesel cars.

The German automaker will eventually have to recall all of the vehicles and change the emissions systems at its own expense, regulators said. Additionally it could face a fine of about $18 billion, or $35,500 per car, federal environmental officials said.

The Environmental Protection Agency on Friday issued the German automaker a "notice of violation" of the Clean Air Act for both VW models and the company's Audi luxury brand. It covers models equipped with four-cylinder diesel engines. The California Air Resources Board issued a similar letter.

Volkswagen and Audi vehicles from model years 2009-2015 have the software, which uses an algorithm that detects when the vehicle is undergoing pollution tests and changes the way it performs from when it is being driven on the open road.

It "is illegal and a threat to public health," said Cynthia Giles, assistant administrator for the Office of Enforcement and Compliance Assurance. "EPA is committed to making sure that all automakers play by the same rules."

"We expected better from VW," Giles said.

Air Resources Board Executive Officer Richard Corey said the California agency wants to bring the cars "into compliance, to dig more deeply into the extent and implications of Volkswagen's efforts to cheat on clean air rules, and to take appropriate further action."

Volkswagen said it is cooperating with the investigation.

"We are unable to comment further at this time," the company said in a statement.

The affected diesel models include: Jetta (model years 2009 – 2015,) Beetle (model years 2009 – 2015,) Audi A3 (model years 2009 – 2015,) Golf (model years 2009 – 2015) and Passat (model years 2014-2015.)

Volkswagen And Audi Recall: 500,000 Cars Broke Environmental Rules, White House Says

By Christopher Harress

The Obama administration Friday forced car manufacturer Volkswagen to recall nearly 500,000 cars after it was discovered the German automaker had fitted its vehicles with special technology that can beat environmental tests for reducing smog, according to a new report.

The recall, which was imposed after an investigation by the Environmental Protection Agency, is expected to affect four-cylinder Volkswagen and Audi cars that were manufactured between 2009 and 2015.

"Using a defeat device in cars to evade clean air standards is illegal and a threat to public health," Cynthia Giles, the E.P.A.'s assistant administrator for the Office of Enforcement and Compliance, told the New York Times.

"Working closely with the California Air Resources Board, E.P.A. is committed to making sure that all automakers play by the same rules. E.P.A. will continue to investigate these very serious violations."

EPA: 482K VW diesel vehicles violated emissions rules

David Shepardson

Washington — The Environmental Protection Agency and the state of California said Volkswagen AG violated federal law by allowing 482,000 diesel VW and Audi cars sold since 2009 to evade emissions requirements using sophisticated software.

The announcement is a big setback to the German automaker that has made diesel vehicles a big part of its U.S. strategy. VW could face fines or criminal prosecution and must immediately prevent those vehicles from being able to defeat emissions rules.

VW concealed facts but has now admitted wrongdoing, said Cynthia Giles, assistant administrator for the Office of Enforcement and Compliance Assurance. "We expected better from VW," she said.

The agencies allege that four-cylinder Volkswagen and Audi diesel cars from model years 2009-2015 include software that circumvents EPA emissions standards for certain air pollutants. California is separately issuing an In-Use Compliance letter to Volkswagen, and EPA and the California Air Resources Board have initiated investigations based on Volkswagen's alleged actions.

EPA said the vehicles software "detects when the car is undergoing official emissions testing, and turns full emissions controls on only during the test." The vehicles include diesel Golf, Jetta, Sportwagen, Beetle and Audi A3 vehicles built from 2009-2015.

EPA said "the effectiveness of these vehicles' pollution emissions control devices is greatly reduced during all normal driving situations. This results in cars that meet emissions standards in the laboratory or testing station, but during normal operation, emit nitrogen oxides, or NOx, at up to 40 times the standard. The software produced by Volkswagen is a 'defeat device,' as defined by the Clean Air Act."

NOx pollution contributes to nitrogen dioxide, ground-level ozone, and fine particulate matter. EPA said exposure has been linked to serious health issues, including increased asthma attacks and other respiratory illnesses that can be serious enough to send people to the hospital. "Exposure to ozone and particulate matter have also been associated with premature death due to respiratory-related or cardiovascular-related effects. Children, the elderly, and people with pre-existing respiratory disease are particularly at risk for health effects of these pollutants," EPA said.

This is the latest example of automakers not following the miles per gallon and emissions rules.

"Using a defeat device in cars to evade clean air standards is illegal and a threat to public health," said Giles. "Working closely with the California Air Resources Board, EPA is committed to making sure that all automakers play by the same rules. EPA will continue to investigate these very serious matters."

The Clean Air Act requires vehicle manufacturers to certify to EPA that their products will meet applicable federal emission standards to control air pollution, and every vehicle sold in the U.S. must be covered by an EPA-issued certificate of conformity. Motor vehicles equipped with defeat devices, which reduce the effectiveness of the emission control system during normal driving conditions, cannot be certified.

"Working with U.S. EPA we are taking this important step to protect public health thanks to the dogged investigations by our laboratory scientists and staff," said Air Resources Board Executive Officer Richard Corey. "Our goal now is to ensure that the affected cars are brought into compliance, to dig more deeply into the extent and implications of Volkswagen's efforts to cheat on clean air rules, and to take appropriate further action."

The issue first came to the attention of the agencies in 2014 after independent analysis by researchers at West Virginia University, working with the International Council on Clean Transportation, a non-governmental organization, raised questions about emissions levels, and the agencies began further investigations into the issue.

In September, after EPA and CARB demanded an explanation for the identified emission problems, Volkswagen admitted that the cars contained defeat devices, the agencies said.

EPA said VW must recall the vehicles. EPA said "owners should know that although these vehicles have emissions exceeding standards, these violations do not present a safety hazard and the cars remain legal to drive and resell. Owners of cars of these models and years do not need to take any action at this time."

EPA Says VW Intentionally Violates Clean Air Standards

By MATTHEW DALY, ASSOCIATED PRESS WASHINGTON — Sep 18, 2015, 12:42 PM ET

The Environmental Protection Agency says nearly 500,000 Volkswagen and Audi diesel cars built in the past seven year are intentionally violating clean air standards by using software that evades EPA emissions standards.

The EPA says the cars include a device programmed to detect when the car is undergoing official emissions testing. The cars only turn on full emissions control systems during that testing. The EPA says the controls are turned off during normal driving situations.

The EPA called the company's use of the device illegal and a threat to public health.

The EPA called on VW to fix the cars' emissions systems, but said car owners do not need to

take any immediate action.

VW said in a statement it is cooperating with the investigation.

Bloomberg:

http://www.bloomberg.com/news/articles/2015-09-18/epa-says-volkswagon-software-circumvented-car-emissions-testing

EPA Says Volkswagen Circumvented Car Emissions Tests

Jeff Plungis

Volkswagen AG sold diesel cars with software that circumvented U.S. emissions standards for air pollution, the Environmental Protection Agency said.

The company sold Volkswagen and Audi brand cars from model years 2009-2015 that contained a "sophisticated software algorithm" that detects when the car is undergoing official emissions testing, and turns on full emissions control, the agency said. During normal driving times, the systems don't operate fully, regulators said.

The potential fine is $37,500 per vehicle and 482,000 autos are part of the case, yielding a potential fine of more than $18 billion, Cynthia Giles, EPA assistant administrator for enforcement and compliance, said on a phone call with reporters Friday.

California is also investigating the claims.

Volkswagen said in a statement it is cooperating with the investigation and unable to comment

further.

Business Insider:

http://www.businessinsider.com/vw-told-to-recall-500000-cars-after-us-government-accuses-it-of-dodging-clean-air-standards-2015-9

VW told to recall 500,000 cars after US government accuses it of dodging clean air standards

Benjamin Zhang

The Environmental Protection Agency has ordered the recall of 500,000 Volkswagen cars.

According to Coral Davenport of the New York Times, the EPA accused VW of using hidden software — called a "defeat device" — to dodge clean air standard during emissions testing.

“Using a defeat device in cars to evade clean air standards is illegal and a threat to public health,” assistant administrator for the Office of Enforcement and Compliance Assurance said Cynthia Giles said in a statement.

“Working closely with the California Air Resources Board, EPA is committed to making sure that all automakers play by the same rules. EPA will continue to investigate these very serious matters.”

In response to the recall, Volkswagen issued the following statement to Business Insider.

"Volkswagen Group of America, Inc., Volkswagen AG and Audi AG received today notice from

the US Environmental Protection Agency, US Department of Justice and the California Air Resources Board of an investigation related to certain emissions compliance matters. VW is cooperating with the investigation; we are unable to comment further at this time."

The recall affects 482,000 diesel powered cars sold in the US since 2008. They include:

Volkswagen Jetta TDI: 2009-20015

Volkswagen Beetle TDI: 2009-2015

Audi A3 TDI: 2009-2015

Volkswagen Golf TDI: 2009-2015

Volkswagen Passat TDI: 2014-2015

This story is developing. We will update when more information is available.

EPA says Audi, VW cheating on emissions

By JOHN SICILIANO

The Environmental Protection Agency and California regulators charged automakers Volkswagen and Audi on Friday with purposefully violating emission standards in their line of diesel cars.

EPA accused the automakers of using a device in their vehicles to get around the pollution rules. According to EPA, the device regulates emissions, but only turns on and works while emissions are being tested.

"Using a defeat device in cars to evade clean air standards is illegal and a threat to public health," said Cynthia Giles, EPA assistant administrator for the agency's enforcement office. "Working closely with the California Air Resources Board, EPA is committed to making sure that all automakers play by the same rules. EPA will continue to investigate these very serious matters."

Giles said VW was "concealing facts" about the devices. The vehicle models involved include the popular Jetta, Audi A-3, Passat and the iconic Beetle, and in model years 2009-2015. The violations cover 482,000 diesel passenger cars.

The EPA's announcement isn't a final decision, but is a clear sign that the EPA believes it has a case against the automakers, one that could lead to fines as large as $37,000 per vehicle. All together, the combined fines could pile up to $18 billion.

An EPA statement said "California is separately issuing an In-Use Compliance letter to Volkswagen, and EPA and the California Air Resources Board ... have both initiated investigations based on Volkswagen's alleged actions."

"Working with US EPA we are taking this important step to protect public health thanks to the dogged investigations by our laboratory scientists and staff," the California board's CEO Richard Corey said. "Our goal now is to ensure that the affected cars are brought into compliance, to dig more deeply into the extent and implications of Volkswagen's efforts to cheat on clean air rules, and to take appropriate further action."

EPA accuses VW of cheating on emission rules

Published 12:29 PM EDT Sep 18, 2015

NEW YORK (CNNMoney) —Diesel cars from Volkswagen and Audi cheated on clean air rules by including software that made the cars look cleaner than they actually were, according to federal and California regulators.

The regulators say that the software on the cars turned up the emission controls only when it could tell that the car was being tested.

"The effectiveness of these vehicles' pollution emissions control devices is greatly reduced during all normal driving situations," said the Environmental Protection Agency's notice to the company. "This results in cars that meet emissions standards in the laboratory or testing station, but during normal operation, emit nitrogen oxides at up to 40 times the standard."

There are nearly 500,000 of the diesel cars on U.S. roads. The models include the VW Jetta, the Beetle and the Golf from model years 2009 through 2015, the Passat from 2014-2015 as well as the Audi A3, model years 2009-2015. The luxury brand is owned by Volkswagen.

Owners of the affected cars do not face health risks according to the EPA and can to continue to drive or sell the cars. But the EPA says that VW will be responsible for fixing the problem.

Volkwagen did not immediately respond to a request for comment.

Volkswagen told to recall 500,000 vehicles over emissions

by Catherine Neilan

Volkswagen has been ordered to recall nearly half a million cars in the US by the Obama administration, which claims the German car group used software that was purposely designed to dodge environmental standards for reducing smog.

The US government's Environmental Protection Agency issued the company a notice of violation this afternoon, accusing Volkswagen of having installing a "defeat device" into its four-cylinder Volkswagen and Audi vehicles between 2009 and 2015, according to the New York Times.

The device is programmed to detect when the car is undergoing emissions test, during which time it will turn on its full emissions control systems. These controls are reportedly then turned off when the car is driving in "normal" situations, when the cars pollute more heavily than reported by Volkswagen, the EPA claims.

The government agency estimates that 482,000 diesel passenger vehicles are affected.

Volkswagen could not be contacted at the time of publication.

EPA: Volkswagen used 'sophisticated software' to cheat emissions tests

By Ben Wolfgang - The Washington Times - Friday, September 18, 2015

The Obama administration on Friday accused Volkswagen of using a "sophisticated software algorithm" to cheat on emissions testing and mask the fact that some models emit too much harmful pollution.

Some Volkswagen cars from model years 2009 to 2015, the Environmental Protection Agency said, include software that can detect when they're undergoing emissions testing. Full emissions controls were activated only during testing and then automatically shut down during normal operation, the agency charged.

"Using a defeat device in cars to evade clean air standards is illegal and a threat to public health," said Cynthia Giles, assistant administrator for the EPA's Office of Enforcement and Compliance Assurance. "Working closely with the California Air Resources Board, EPA is committed to making sure that all automakers play by the same rules. EPA will continue to investigate these very serious matters."

During normal operation, the "defeat device" allowed Volkswagen cars to emit nitrogen oxides at up to 40 times the federal threshold as laid out in the Clean Air Act.

The EPA has issued "a notice of violation" to the automaker, and the state of California has launched its own investigation into the matter. Volkswagen could face civil penalties for the violations, the agency said.

The allegations apply to about 482,000 diesel passenger cars sold since 2008, including Jettas, Beetles, Audi A3s, Golfs and other models.

EPA accuses Volkswagen, Audi of evading emission laws

Nathan Bomey, USA TODAY 12:12 p.m. EDT September 18, 2015

The German automaker adopted a "defeat device" to trick regulators, the EPA said.

The Environmental Protection Agency on Friday accused Volkswagen of installing software on certain cars in the U.S. to evade federal emission regulations, potentially exposing people to harmful pollutants.

The German automaker adopted what the EPA called a "defeat device" to trick U.S. regulators into believing that its cars met Clean Air Act standards, the federal agency said in a statement.

The agency said 482,000 cars violated federal standards, including four-cylinder Volkswagen cars from 2009-15 and Audi diesel cars from the same period. They included the Volkswagen Jetta, Beetle, Golf and Passat, and the Audi A3.

Volkswagen, whose brands include the luxury Audi lineup, may face fines or other penalties, the EPA said.

The cars are still safe to drive, the EPA said, and owners do not need to take immediate action. But the agency will require Volkswagen to fix the cars for free.

Newsweek:

http://www.newsweek.com/epa-volkswagen-software-cheat-clean-air-rules-373869

EPA: Volkswagen Used Software in Cars to Cheat on Clean Air Rules

BY ZOË SCHLANGER 9/18/15 AT 12:14 PM

A U.S. Environmental Protection Agency investigation has concluded that for years Volkswagen has been installing software in its vehicles that circumvents federal emissions standards for air pollution, the agency announced Friday.

EPA alleges that Volkswagen installed a "sophisticated software algorithm on certain Volkswagen vehicles" that could detect when the car was being tested for emissions. The software would turn full emissions controls on only during the official test. "This results in cars that meet emissions standards in the laboratory or testing station, but during normal operation, emit nitrogen oxides, or NOx, at up to 40 times the standard," EPA said in a press release. They called the software a "defeat device," deliberately installed to evade the Clean Air Act standards.

This "defeat device" was found in several car models, from 2009 models up to 2015 models, according to EPA:

Jetta (Model Years 2009 – 2015)

Beetle (Model Years 2009 – 2015)

Audi A3 (Model Years 2009 – 2015)

Golf (Model Years 2009 – 2015)

Passat (Model Years 2014-2015)

In total, this includes about 482,000 passenger cars.

"Using a defeat device in cars to evade clean air standards is illegal and a threat to public health," Cynthia Giles, EPA's Assistant Administrator for the Office of Enforcement and Compliance Assurance, said in a statement emailed Friday. The agency worked with California regulators to investigate the automobile manufacturer and issue a notice of violation.

"Our goal now is to ensure that the affected cars are brought into compliance, to dig more deeply into the extent and implications of Volkswagen's efforts to cheat on clean air rules, and to take appropriate further action," California Air Resources Board Executive Officer Richard Corey said in the statement.

Volkswagen has yet to respond publicly to the EPA allegations. Newsweek has reached out to the company for comment, and we will update if they respond.

Volkswagen Is Ordered to Recall Nearly 500,000 Vehicles Over Emissions Software

By CORAL DAVENPORT SEPT. 18, 2015

WASHINGTON — The Obama administration on Friday ordered Volkswagen to recall nearly a half million cars from the road, saying the German automaker used software intentionally designed to circumvent environmental standards for reducing smog.

The Environmental Protection Agency issued the company a notice of violation and accused the company of breaking the law by installing software known as a "defeat device" in 4-cylinder Volkswagen and Audi vehicles from model years 2009-15. The device is programmed to detect when the car is undergoing official emissions testing, and to only turn on full emissions control systems during that testing. Those controls are turned off during normal driving situations, when the vehicles pollute far more heavily than reported by the manufacturer, the E.P.A. said.

"Using a defeat device in cars to evade clean air standards is illegal and a threat to public health," said Cynthia Giles, the E.P.A.'s assistant administrator for the Office of Enforcement and Compliance. "Working closely with the California Air Resources Board, E.P.A. is committed to making sure that all automakers play by the same rules. E.P.A. will continue to investigate these very serious violations."

The software was designed to conceal the cars' emissions of the pollutant nitrogen oxide, which contributes to the creation of ozone and smog. The pollutants are linked to a range of health problems, including asthma attacks and other respiratory diseases.

The state of California has issued a separate notice of violation to the company. California, the E.P.A. and the Justice Department are working together on an investigation of the allegations.

The allegations cover roughly 482,000 diesel passenger cars sold in the United States since 2009.

Affected diesel models include the Volkswagen Jetta (model years 2009-15), Volkswagen Beetle (model years 2009–15), Audi A3 (model years 2009–15), Volkswagen Golf (model years 2009–15) and Volkswagen Passat (model years 2014-15).

The notice of violation is part of a broader, more aggressive enforcement effort by federal environmental regulators on the auto industry. Analysts said it was meant to send a clear message to automakers that they will be harshly treated for compromising federal rules.

It follows a November 2014 announcement of the administration's largest-ever penalty for a violation of the Clean Air Act, in which the government fined the Korean automakers Hyundai Motor and Kia Motors a combined $300 million as part of a settlement for overstating vehicle fuel-economy standards on 1.2 million cars.

"They want to make it clear that they're going to crack down on cheaters," said Frank O'Donnell, president of the environmental advocacy group Clean Air Watch. "They're cheating not only car buyers but the breathing public. They want to lay down the law, enforce the law, and show they're not going to tolerate cheaters. The laws and regulation are only as good as the enforcement."

I'm trying to confirm the on-the-record comments you made to the Detroit News yesterday, that EPA is expanding its review to include the Audi 3.0L V6 and Porsche Cayenne, which has the same engine. Both already were certified for 2016. And that the engines were certified before the agency knew the information about VW's defeat device.

This information is now public. We'd just like to confirm with the original source that it's true and be as accurate as we can in our descriptions going forward.

I have been working with Liz Purchia and Julia Valentine in the press office but haven't heard from them since last night.

Subject: FW: EPA Clarification of Expanded testing -

Hi Chris,

This is what went to Jeff Plungis of BBerg. I requested that Julia send Shepardson the highlighted section.

EPA has not expanded the number of vehicles listed in the Notices of Violation sent to Volkswagen on Friday September 18.

Separate from the investigation, EPA's Office of Transportation Air Quality has expanded its routine vehicle compliance and oversight testing. Expanded testing is prompted by Volkswagen's actions and is not related to specific information about any other manufacturer. EPA and the California Air Resources Board are working together to acquire vehicles for additional testing. The focus is on light duty diesel vehicles from multiple manufacturers but could expand to include gasoline vehicles.

ON BACKGROUND: Chris Grundler confirmed that EPA and CARB are procuring vehicles now for in use screening tests. This is not a confirmation of an expansion of the investigation launched on Friday. Instead, this is EPA describing what we are doing to enhance standard compliance and oversight procedures in light of recent information about VW's defeat devices.

Reply-To: Jeff Plungis <jplungis@bloomberg.net>

Checking to make sure that you saw that the Detroit News published its story with this section:

Christopher Grundler, director of the EPA's Office of Transportation and Air Quality, told The News that his agency is expanding its review to the Audi 3.0L V6 and Porsche Cayenne, which has the same engine. Both already were certified for 2016. Audi, VW's luxury brand, also uses that engine in the diesel Q5, A6, A7 and A8.

"They were certified well before we knew what we know now," Grundler said.

He reiterated the agency will not certify the 2016 diesel 2.0-liter engine until the automaker demonstrates that the engines meet U.S.

emissions standards.

So you have one of the EPA's highest-ranking officials speaking on the record about a development in one of the biggest automotive news stories in recent years, maybe ever. To be clear, I'm asking whether Mr. Grundler was quoted accurately. It's a yes or no question.

Please get back to me as soon as you can.

Julia:

Thanks for the response. We got the EPA comments in the story.

On another question, the Detroit News is reporting that EPA told them the VW investigation is expanding to include the 3.0 liter diesel engine used by Audi and in the Porsche Cayenne SUV. Can you confirm?

Subject: Re:EPA response

Hi Jeff.

Sorry this took a bit.

Responses below attributable to EPA spokesperson. If you need a specific name you may use Liz Purchia.

-- Can you point me to any kind of overview on how the EPA recall process works?

EPA did not issue a recall or require VW to implement one when it issued the Notice of Violation on Friday. **(OTAQ can add more about recall if we want)**

-- Are there any recent recent examples involving other automakers on a compliance issue of this scale?

We have seen manufacturers installing defeat devices

before. For example, a 1998 settlement and consent decree resolved alleged Clean Air Act violations related to installing defeat devices in many large truck engines throughout the 1990s. There are no recent similar cases to compare this to. Recent defeat device cases – within the last 10 years or more – have dealt with aftermarket installation.

-- Anything you can tell us about timing with VW, how soon a recall could be ordered?

EPA expects to compel VW to issue a recall in the future to reduce the emissions impacts of these vehicles. Owners will be notified of that recall once Volkswagen and Audi have developed a remedial plan and EPA has approved the plan. Manufacturers are given a reasonable amount of time to develop a plan to complete the repairs, including both the repair procedure and manufacture of any needed parts.

-- Could you order consumers to be compensated, aside from a free repair?

Federal courts can order equitable remedies in enforcement cases under the Clean Air act. The case is under investigation and that includes what remedies would be appropriate to seek.

-- Are you considering ordering VW to do more than a recall, in order to to compensate for the environmental damage of all the years of non-compliant cars?

EPA will require VW to remedy the noncompliance. Determinations regarding potential penalties and other

remedies will be assessed as part of the investigation EPA has opened in conjunction with the U.S. Department of Justice.

-- Some consumers probably won't want to do the repairs, especially if the reprogramming affects the cars' fuel economy or performance. Would the agency factor that in as it considers an appropriate remedy for VW?

Some states require proof that emissions recalls have been performed prior to issuing the vehicle registration. Even in states that do not have this requirement, it is important to have emissions recalls performed because without the repairs, vehicles may be emitting harmful pollutants in excess of the federal emission standards.

Clinton comes out against Keystone XL as 'distraction'

By Kevin Rogers

Former Secretary of State Hillary Clinton, a Democratic contender for president, on Tuesday came out in opposition to the long-delayed Keystone XL pipeline, calling it a "distraction" that would "interfere" with climate change policies.

Speaking at a town hall event in Iowa, Clinton, who had declined to take a position on the TransCanada pipeline due to her work at the State Department, said approving the pipeline

would run contrary to necessary climate action.

"I think it is imperative that we look at the Keystone XL pipeline as what I believe it is: a distraction from the important work we have to do to combat climate change, and unfortunately from my perspective, one that interferes with our ability to move forward and deal with other issues," she said. "Therefore, I oppose it. I oppose it because I don't think it's in the best interest of what we need to do to combat climate change."

The pipeline, which would carry oil sands crude from Alberta to Gulf Coast refineries, has been under federal review for seven years.

Clinton's remarks drew swift fire from the oil industry and some of her Democratic challengers, who had made earlier stances against the pipeline. President Barack Obama, who has the final say over approval, has said he would reject it if it would increase greenhouse gas emissions.

"Hillary Clinton's decision to oppose Keystone is a missed opportunity to seize the true potential of our energy renaissance," American Petroleum Institute President and CEO Jack Gerard said in a statement.

Former Maryland Gov. Martin O'Malley, who is also seeking the Democratic nomination, said Clinton was chasing polls.

"Leadership is about forging public opinion, not following it," he tweeted. "On Keystone XL, Hillary Clinton has followed."

Sage grouse plan drives splits among GOP, greens and oil groups

By Kevin Rogers

The greater sage grouse won't require protection under the Endangered Species Act, thanks to “unprecedented” federal and state cooperation on a conservation plan that supporters hailed as a new path forward for species management.

But the move against listing the bird as threatened or endangered splintered traditional alliances across the political spectrum, generating divisions among Republicans, among environmental groups, and even among oil and gas producers, as they debated whether the management program was a model of compromise or a fig leaf covering more regulatory overreach.

In lieu of a listing, the Interior Department, 11 state governments and private stakeholders developed a plan that would expand protections for the sage grouse to some degree on a total 67 million acres of federal land. State and private landowners also set aside additional acreage to protect the species, though Interior officials weren't able to provide a number.

The department estimated that 90 percent of medium- or high-probability oil and gas reserves are located outside the sage grouse habitat and so are unaffected by the plan.

The plan's three-tiered approach seeks to limit surface disruptions to sage grouse habitats from new development; improve habitat conditions through mitigating existing damage, and improve monitoring of all sage grouse habitats; while reducing the threat of wildfires by proactively managing highly flammable invasive plant species such as cheat grass.

Across the 67 million acres designated as sage grouse habitat, developers will be required to minimize surface disruptions. But the strongest protections would fall across 12 million acres of high priority habitat touching parts of 10 states, where new development of both fossil energy and renewables would be limited unless it would have no impact or positive impact on the habitat, Interior officials said.

While officials estimate that only 10 percent of likely fossil reserves are in the protected sage grouse habitat, it is unclear what proportion—if any—are located in the high-priority area.

At a ceremony in Colorado, Interior Secretary Sally Jewell and federal and state supporters of the plan said the landscape-scale approach represents a new path forward for species protection and federal-state cooperation.

“I think what we are witnessing here is a glimpse into the future of the West,” Jewell said. “There are other species out there, like the greater sage grouse, that will be the canary in the coal mine, that are going to warn us that our development and the old ways of doing things may not be sustainable. But today, we've proven we can take smart, science-based, forward-looking steps for a healthy ecosystem and a healthy economy.”

Reaction to the announcement, however, revealed divisions among stakeholders of every type.

Some Republicans contended that western states are no better off, that today's steps amount to a “de facto” listing rather than a formal designation.

“Don't be fooled,” House Natural Resources Committee Chairman Rob Bishop, R-Utah, said in a statement. “The announcement not to list the sage grouse is a cynical ploy. With the stroke of a pen, the Obama administration’s oppressive land management plan is the same as a listing.”

Bishop has scheduled a hearing on the agreement, as well as other state energy issues, Sept. 30.

Sen. Dean Heller, R-Nev., accused the federal government of coercing western states to comply.

“This has been an issue of the Department of the Interior using the threat of a listing to get what it really wanted all along: limiting Nevadans’ access to millions of acres of land,” he said in a statement.

Heller's argument ran contrary to the Republican governors who flanked Jewell during the announcement, including his home-state governor, Brian Sandoval. Sandoval said Jewell was the “right person at the right time” to strike a deal, and said the agreement represented a potential shift in relations between the federal government and Western states.

“There's been a long relationship, perhaps a love-hate style relationship through the years,” he said, speaking of his state's history with the federal government. “We developed this trust, and it's not easy in Nevada. It's a lot easier to fight than it is to work together.”

And Republican Gov. Matt Mead of Wyoming defended the plan as being in sync with the intended goals of the Endangered Species Act—to protect habitats to avoid the more drastic protection efforts that would come with a listing.

“If you think about the Endangered Species Act of 1973, there's nothing in that act that says the goal is to list species,” he said. “The goal is to make sure we take care of our species, take care of our habitats so that we don't have to list species.”

The decision also drew a mixed response from environmental and conservation organizations. Natural Resources Defense Council President Rhea Suh, a former nominee to oversee Interior's fish, wildlife and parks policies, called the plan a “breakthrough” for species protection.

“It's all hands on deck, with states and private landowners as essential partners with the federal government working together for a plan that protects millions of acres across the western states to be successful,” she said in a statement.

But WildEarth Guardians, the group that initially sued Interior to list the sage grouse as

endangered, said the administration failed to properly protect the species in an effort to dodge political backlash.

"The government's proposed plans fall far short of ensuring this iconic, imperiled bird is protected from the serious threats posed by fossil fuel extraction, grazing and other types of development," Erik Molvar, a wildlife biologist for the group, said in a statement.

The nation's most prominent oil and gas industry groups were also divided on the move. While the Independent Petroleum Association of America decried the plan as a threat to smaller companies, the American Petroleum Institute called it a "science-based" approach that charted a better path forward for land management.

"Despite the numerous private-public partnerships and voluntary conservation efforts to conserve the greater sage-grouse and its habitat, America's energy producers—and in turn, the American taxpayers—will suffer from these more-restrictive land management plans," Dan Naatz, IPAA senior vice president of government relations and political affairs, said in a statement.

On a call with reporters, however, API President and CEO Jack Gerard praised the decision as the best possible outcome to balance development and conservation

"We're very comfortable and pleased with the outcome, because frankly, it's science-based," he said. "It shows that under the Federal Land Policy Act that we can indeed have multiple uses of the lands, where we're able to produce the energy we need as a nation while at the same time protect the habitat of the sage grouse."

VW CEO says he's 'endlessly sorry' for tarnishing brand

By Geir Moulson and Pan Pylas

BERLIN (AP) — Volkswagen AG's smog-test troubles escalated Tuesday as the company acknowledged putting stealth software in millions of vehicles worldwide. The scandal has now cost VW more than 24 billion euros ($26 billion) in market value.

Volkwagen stunningly admitted that some 11 million of the German carmaker's diesel vehicles contain software that evades emissions controls, far more than the 482,000 identified by the U.S. Environmental Protection Agency as violating the Clean Air Act.

Volkswagen also warned that future profits could be affected, and set aside an initial 6.5 billion euros ($7.3 billion) to cover the fallout.

CEO Martin Winterkorn apologized for the deception under his leadership and pledged a fast and thorough investigation, but gave no indication that he might resign.

Tennessee lawmakers plan hearings on VW emissions scandal

By Erik Schelzig

NASHVILLE, Tenn. (AP) — Lawmakers in Tennessee plan to hold hearings over whether the Volkswagen emissions scandal could imperil the nearly $900 million in state and local incentives that have been directed toward the German automaker's lone U.S. plant in Chattanooga.

Volkswagen has been reeling from revelations that it used secret software to thwart diesel smog tests on nearly 500,000 cars in the United States. The company has since admitted that the software was installed on some 11 million vehicles, and CEO Martin Winterkorn has said he's "endlessly sorry" for tarnishing the VW brand.

Republican state Sen. Bo Watson, who has been a vocal critic of Volkswagen's labor policies, cited the state's "significant investment" into the Chattanooga plant in calling for a Senate Finance Committee hearing.

"I am very concerned as to the financial impact these violations could present to the state of Tennessee," Watson wrote in a letter to the panel's chairman. "Any action that threatens the stability and sustainability of the investment should be reviewed by the finance committee, without delay."

Leonardo DiCaprio says he's shedding fossil fuel investments

By Jennifer Peltz

NEW YORK (AP) — Leonardo DiCaprio is joining a campaign to use investment decisions to fight global warming: He's planning to shed his own investments in fossil fuels, an activist group said Tuesday.

The star of "The Wolf of Wall Street" and "Blood Diamond" joined members of the Divest-Invest Coalition as it announced his plans and highlighted growth in such pledges during the past year. Advocates say their effort to put pocketbook and social pressure on traditional energy producers is gaining momentum; industry groups say the campaign is misguided and its impact negligible.

Students began pressing various colleges in 2011 to drop their fossil fuel holdings and increase their stake in renewable energy companies. Now, foundations, pension funds, insurers, state and local governments and others worth a total of $2.6 trillion have pledged to reduce or eliminate their fossil fuel investments, the coalition said in a report released Tuesday. The total is 50 times larger than it was last year, when activists set a goal of tripling it before the United Nations climate negotiations planned in Paris in November and December.

"Clearly, our movement is growing faster than expected," said May Boeve, the executive director of 350.org, an anti-global-warming group. The coalition says over 430 institutions and 2,000 individuals have signed on, compared to about 180 institutions and 650 people a year ago.

Puerto Rico power company reaches deal with certain lenders

By The Associated Press

SAN JUAN, Puerto Rico (AP) — Puerto Rico's troubled electricity utility says it has reached a deal to restructure about $700 million in expired debt with fuel line lenders.

The Puerto Rico Electric Power Authority said Tuesday that lenders have two options: converting credit agreements into long-term loans or exchanging all or part of expired bonds into new bonds worth 85 percent of the existing value.

Chief Restructuring Officer Lisa Donahue said the company is still negotiating with monoline bond insurers.

The company owes about $9 billion. It reached a deal earlier this month with some creditors to reduce principal owed in exchange for new securities worth 85 percent of the existing bonds.

Ad featuring kids, mushroom cloud slams Bennet for Iran vote

By Erica Werner

WASHINGTON (AP) — A conservative group is airing an ad showing kids counting down to a mushroom cloud to slam Democratic Sen. Michael Bennet of Colorado over the Iran nuclear deal.

The ad by the group Advancing Colorado shows children counting down from 10 in different languages, then a huge explosion and billowing cloud. Over charred and smoking rubble it claims that Bennet is "jeopardizing our safety" by backing the deal.

The ad offers a taste of how the GOP may seek to use the Iran issue politically after Senate Democrats including Bennet blocked Republican attempts to unravel the deal. Bennet is up for re-election next year in a competitive state, though Republicans don't yet have a candidate against him. He is the most vulnerable Senate Democrat this cycle, but in 2018 a number of potentially vulnerable Democrats will be defending their seats and Republicans will likely try to make them pay a price for supporting the agreement.

The accord backed by the Obama administration and negotiated with Iran and five world powers aims to curb Iran's nuclear program in exchange for billions in relief from economic sanctions. But Republicans say it will serve only to empower Iran.

Caribbean braces for worsening drought as dry season nears

By Danica Coto

SAN JUAN, Puerto Rico (AP) — The most severe drought to hit the Caribbean in recent years is expected to worsen despite rains from tropical storms that have replenished some reservoirs.

Forecasters say El Nino phenomenon is gathering strength and will continue to warm the tropical Pacific until early next year, which translates into sparse rainfall for this largely parched region as the dry season approaches.

"The real concern will come late in the year," said Adrian Trotman, a forecaster with the Caribbean Institute for Meteorology and Hydrology. "We are definitely in a period of relief, but it's quite likely the relief will not be as long-lived as we would like it to be."

Ukraine's richest man wields electricity as weapon, plays both sides of war

By Nataliya Vasilyeva

KRASNODON, Ukraine (AP) — In this town deep in eastern Ukraine's rebel heartland, about a quarter of the population works in the coal mines owned by billionaire Rinat Akhmetov, Ukraine's richest man. Here and elsewhere in territory controlled by the separatist insurgency, the tycoon keeps the lights on and people clothed and fed, with a mixture of jobs, electricity and aid.

At the same time, Akhmetov operates factories on the other side of the frontline, powering Ukraine's economy and pouring hundreds of millions in taxes into government coffers. His steel products, which are finished in rebel territory, are then shipped to the West — where they bring in billions in revenue for Akhmetov that then indirectly props up the separatist government.

The billionaire is able to straddle the frontline by using his fortune and business empire as leverage. His companies provide more than 300,000 jobs across Ukraine, most in the rebel-held east. Meanwhile, his control over utilities that provide electricity and heating to both sides allow him to dictate terms to the government as well as the rebels. Cracking down on Akhmetov's factories in government territory would threaten Ukraine's depressed economy, while a collapse of utilities in the east would undermine the rebels' grip on power.

It makes for a striking picture of economic cooperation between enemy areas: Coal produced in Krasnodon mines, on rebel territory, travels to the Avdiivka coking plant on the government side. Coke is then shipped back to rebel lands, to a metals smelter in Yenakieve, and the metals produced there are transported to government territory on the Azov Sea — for shipping to the West.

Guyana says Venezuela deploys troops to disputed border

By Bert Wilkinson

GEORGETOWN, Guyana (AP) — Guyana's President David Granger said Tuesday that

Venezuela has deployed troops to a contested border region in what he called a "dangerous" escalation of a long-running dispute between the South American nations.

The government of President Nicolas Maduro made "extraordinary military deployments," along what Guyana considers its western border, Granger told reporters.

He called the development a "hostile and aggressive" step in a border dispute that dates to the 19th century but has grown more heated over the past year following a major off-shore oil discovery in waters claimed by both nations.

"We feel that Venezuela is treading a dangerous course at this point in time rather than seeking a peaceful resolution of the matter," Granger said. "Venezuela seems to be pursuing a very offensive and aggressive course."

More

Swedish utility Vattenfall sells its German coal plants

STOCKHOLM (AP) — Vattenfall AB says it is selling off its German coal plants, a major source of greenhouse gases, and its mining assets as the Swedish utility seeks to adjust its energy strategy.

The company says potential buyers can bid for four power plants as well as corresponding mining activities. Buyers can also bid for 10 hydropower plants, adding that these power plants will not be sold separately.

Tuesday's move comes after Vattenfall had made large write-downs related to its operations in Germany. The Swedish government also has pressured the company to exit its coal-fired power generation in Germany.

Vattenfall stressed it "remains fully committed" to its other energy operations in Germany including district heating, electricity distribution and wind energy.

Clinton comes out against Keystone XL as 'distraction'

By Kevin Rogers

Former Secretary of State Hillary Clinton, a Democratic contender for president, on Tuesday came out in opposition to the long-delayed Keystone XL pipeline, calling it a "distraction" that would "interfere" with climate change policies.

Speaking at a town hall event in Iowa, Clinton, who had declined to take a position on the TransCanada pipeline due to her work at the State Department, said approving the pipeline

would run contrary to necessary climate action.

"I think it is imperative that we look at the Keystone XL pipeline as what I believe it is: a distraction from the important work we have to do to combat climate change, and unfortunately from my perspective, one that interferes with our ability to move forward and deal with other issues," she said. "Therefore, I oppose it. I oppose it because I don't think it's in the best interest of what we need to do to combat climate change."

The pipeline, which would carry oil sands crude from Alberta to Gulf Coast refineries, has been under federal review for seven years.

Clinton's remarks drew swift fire from the oil industry and some of her Democratic challengers, who had made earlier stances against the pipeline. President Barack Obama, who has the final say over approval, has said he would reject it if it would increase greenhouse gas emissions.

"Hillary Clinton's decision to oppose Keystone is a missed opportunity to seize the true potential of our energy renaissance," American Petroleum Institute President and CEO Jack Gerard said in a statement.

Former Maryland Gov. Martin O'Malley, who is also seeking the Democratic nomination, said Clinton was chasing polls.

"Leadership is about forging public opinion, not following it," he tweeted. "On Keystone XL, Hillary Clinton has followed."

Sage grouse plan drives splits among GOP, greens and oil groups

By Kevin Rogers

The greater sage grouse won't require protection under the Endangered Species Act, thanks to “unprecedented” federal and state cooperation on a conservation plan that supporters hailed as a new path forward for species management.

But the move against listing the bird as threatened or endangered splintered traditional alliances across the political spectrum, generating divisions among Republicans, among environmental groups, and even among oil and gas producers, as they debated whether the management program was a model of compromise or a fig leaf covering more regulatory overreach.

In lieu of a listing, the Interior Department, 11 state governments and private stakeholders developed a plan that would expand protections for the sage grouse to some degree on a total 67 million acres of federal land. State and private landowners also set aside additional acreage to protect the species, though Interior officials weren't able to provide a number.

The department estimated that 90 percent of medium- or high-probability oil and gas reserves are located outside the sage grouse habitat and so are unaffected by the plan.

The plan's three-tiered approach seeks to limit surface disruptions to sage grouse habitats from new development; improve habitat conditions through mitigating existing damage, and improve monitoring of all sage grouse habitats; while reducing the threat of wildfires by proactively managing highly flammable invasive plant species such as cheat grass.

Across the 67 million acres designated as sage grouse habitat, developers will be required to minimize surface disruptions. But the strongest protections would fall across 12 million acres of high priority habitat touching parts of 10 states, where new development of both fossil energy and renewables would be limited unless it would have no impact or positive impact on the habitat, Interior officials said.

While officials estimate that only 10 percent of likely fossil reserves are in the protected sage grouse habitat, it is unclear what proportion—if any—are located in the high-priority area.

At a ceremony in Colorado, Interior Secretary Sally Jewell and federal and state supporters of the plan said the landscape-scale approach represents a new path forward for species protection and federal-state cooperation.

“I think what we are witnessing here is a glimpse into the future of the West,” Jewell said. “There are other species out there, like the greater sage grouse, that will be the canary in the coal mine, that are going to warn us that our development and the old ways of doing things may not be sustainable. But today, we've proven we can take smart, science-based, forward-looking steps for a healthy ecosystem and a healthy economy.”

Reaction to the announcement, however, revealed divisions among stakeholders of every type.

Some Republicans contended that western states are no better off, that today's steps amount to a “de facto” listing rather than a formal designation.

“Don't be fooled,” House Natural Resources Committee Chairman Rob Bishop, R-Utah, said in a statement. “The announcement not to list the sage grouse is a cynical ploy. With the stroke of a pen, the Obama administration’s oppressive land management plan is the same as a listing.”

Bishop has scheduled a hearing on the agreement, as well as other state energy issues, Sept. 30.

Sen. Dean Heller, R-Nev., accused the federal government of coercing western states to comply.

“This has been an issue of the Department of the Interior using the threat of a listing to get what it really wanted all along: limiting Nevadans’ access to millions of acres of land,” he said in a statement.

Heller's argument ran contrary to the Republican governors who flanked Jewell during the announcement, including his home-state governor, Brian Sandoval. Sandoval said Jewell was the “right person at the right time” to strike a deal, and said the agreement represented a potential shift in relations between the federal government and Western states.

“There's been a long relationship, perhaps a love-hate style relationship through the years,” he said, speaking of his state's history with the federal government. “We developed this trust, and it's not easy in Nevada. It's a lot easier to fight than it is to work together.”

And Republican Gov. Matt Mead of Wyoming defended the plan as being in sync with the intended goals of the Endangered Species Act—to protect habitats to avoid the more drastic protection efforts that would come with a listing.

“If you think about the Endangered Species Act of 1973, there's nothing in that act that says the goal is to list species,” he said. “The goal is to make sure we take care of our species, take care of our habitats so that we don't have to list species.”

The decision also drew a mixed response from environmental and conservation organizations. Natural Resources Defense Council President Rhea Suh, a former nominee to oversee Interior's fish, wildlife and parks policies, called the plan a “breakthrough” for species protection.

“It's all hands on deck, with states and private landowners as essential partners with the federal government working together for a plan that protects millions of acres across the western states to be successful,” she said in a statement.

But WildEarth Guardians, the group that initially sued Interior to list the sage grouse as

endangered, said the administration failed to properly protect the species in an effort to dodge political backlash.

"The government's proposed plans fall far short of ensuring this iconic, imperiled bird is protected from the serious threats posed by fossil fuel extraction, grazing and other types of development," Erik Molvar, a wildlife biologist for the group, said in a statement.

The nation's most prominent oil and gas industry groups were also divided on the move. While the Independent Petroleum Association of America decried the plan as a threat to smaller companies, the American Petroleum Institute called it a "science-based" approach that charted a better path forward for land management.

"Despite the numerous private-public partnerships and voluntary conservation efforts to conserve the greater sage-grouse and its habitat, America's energy producers—and in turn, the American taxpayers—will suffer from these more-restrictive land management plans," Dan Naatz, IPAA senior vice president of government relations and political affairs, said in a statement.

On a call with reporters, however, API President and CEO Jack Gerard praised the decision as the best possible outcome to balance development and conservation

"We're very comfortable and pleased with the outcome, because frankly, it's science-based," he said. "It shows that under the Federal Land Policy Act that we can indeed have multiple uses of the lands, where we're able to produce the energy we need as a nation while at the same time protect the habitat of the sage grouse."

VW CEO says he's 'endlessly sorry' for tarnishing brand

By Geir Moulson and Pan Pylas

BERLIN (AP) — Volkswagen AG's smog-test troubles escalated Tuesday as the company acknowledged putting stealth software in millions of vehicles worldwide. The scandal has now cost VW more than 24 billion euros ($26 billion) in market value.

Volkwagen stunningly admitted that some 11 million of the German carmaker's diesel vehicles contain software that evades emissions controls, far more than the 482,000 identified by the U.S. Environmental Protection Agency as violating the Clean Air Act.

Volkswagen also warned that future profits could be affected, and set aside an initial 6.5 billion euros ($7.3 billion) to cover the fallout.

CEO Martin Winterkorn apologized for the deception under his leadership and pledged a fast and thorough investigation, but gave no indication that he might resign.

Tennessee lawmakers plan hearings on VW emissions scandal

By Erik Schelzig

NASHVILLE, Tenn. (AP) — Lawmakers in Tennessee plan to hold hearings over whether the Volkswagen emissions scandal could imperil the nearly $900 million in state and local incentives that have been directed toward the German automaker's lone U.S. plant in Chattanooga.

Volkswagen has been reeling from revelations that it used secret software to thwart diesel smog tests on nearly 500,000 cars in the United States. The company has since admitted that the software was installed on some 11 million vehicles, and CEO Martin Winterkorn has said he's "endlessly sorry" for tarnishing the VW brand.

Republican state Sen. Bo Watson, who has been a vocal critic of Volkswagen's labor policies, cited the state's "significant investment" into the Chattanooga plant in calling for a Senate Finance Committee hearing.

"I am very concerned as to the financial impact these violations could present to the state of Tennessee," Watson wrote in a letter to the panel's chairman. "Any action that threatens the stability and sustainability of the investment should be reviewed by the finance committee, without delay."

Leonardo DiCaprio says he's shedding fossil fuel investments

By Jennifer Peltz

NEW YORK (AP) — Leonardo DiCaprio is joining a campaign to use investment decisions to fight global warming: He's planning to shed his own investments in fossil fuels, an activist group said Tuesday.

The star of "The Wolf of Wall Street" and "Blood Diamond" joined members of the Divest-Invest Coalition as it announced his plans and highlighted growth in such pledges during the past year. Advocates say their effort to put pocketbook and social pressure on traditional energy producers is gaining momentum; industry groups say the campaign is misguided and its impact negligible.

Students began pressing various colleges in 2011 to drop their fossil fuel holdings and increase their stake in renewable energy companies. Now, foundations, pension funds, insurers, state and local governments and others worth a total of $2.6 trillion have pledged to reduce or eliminate their fossil fuel investments, the coalition said in a report released Tuesday. The total is 50 times larger than it was last year, when activists set a goal of tripling it before the United Nations climate negotiations planned in Paris in November and December.

"Clearly, our movement is growing faster than expected," said May Boeve, the executive director of 350.org, an anti-global-warming group. The coalition says over 430 institutions and 2,000 individuals have signed on, compared to about 180 institutions and 650 people a year ago.

Puerto Rico power company reaches deal with certain lenders

By The Associated Press

SAN JUAN, Puerto Rico (AP) — Puerto Rico's troubled electricity utility says it has reached a deal to restructure about $700 million in expired debt with fuel line lenders.

The Puerto Rico Electric Power Authority said Tuesday that lenders have two options: converting credit agreements into long-term loans or exchanging all or part of expired bonds into new bonds worth 85 percent of the existing value.

Chief Restructuring Officer Lisa Donahue said the company is still negotiating with monoline bond insurers.

The company owes about $9 billion. It reached a deal earlier this month with some creditors to reduce principal owed in exchange for new securities worth 85 percent of the existing bonds.

Ad featuring kids, mushroom cloud slams Bennet for Iran vote

By Erica Werner

WASHINGTON (AP) — A conservative group is airing an ad showing kids counting down to a mushroom cloud to slam Democratic Sen. Michael Bennet of Colorado over the Iran nuclear deal.

The ad by the group Advancing Colorado shows children counting down from 10 in different languages, then a huge explosion and billowing cloud. Over charred and smoking rubble it claims that Bennet is "jeopardizing our safety" by backing the deal.

The ad offers a taste of how the GOP may seek to use the Iran issue politically after Senate Democrats including Bennet blocked Republican attempts to unravel the deal. Bennet is up for re-election next year in a competitive state, though Republicans don't yet have a candidate against him. He is the most vulnerable Senate Democrat this cycle, but in 2018 a number of potentially vulnerable Democrats will be defending their seats and Republicans will likely try to make them pay a price for supporting the agreement.

The accord backed by the Obama administration and negotiated with Iran and five world powers aims to curb Iran's nuclear program in exchange for billions in relief from economic sanctions. But Republicans say it will serve only to empower Iran.

Caribbean braces for worsening drought as dry season nears

By Danica Coto

SAN JUAN, Puerto Rico (AP) — The most severe drought to hit the Caribbean in recent years is expected to worsen despite rains from tropical storms that have replenished some reservoirs.

Forecasters say El Nino phenomenon is gathering strength and will continue to warm the tropical Pacific until early next year, which translates into sparse rainfall for this largely parched region as the dry season approaches.

"The real concern will come late in the year," said Adrian Trotman, a forecaster with the Caribbean Institute for Meteorology and Hydrology. "We are definitely in a period of relief, but it's quite likely the relief will not be as long-lived as we would like it to be."

Ukraine's richest man wields electricity as weapon, plays both sides of war

By Nataliya Vasilyeva

KRASNODON, Ukraine (AP) — In this town deep in eastern Ukraine's rebel heartland, about a quarter of the population works in the coal mines owned by billionaire Rinat Akhmetov, Ukraine's richest man. Here and elsewhere in territory controlled by the separatist insurgency, the tycoon keeps the lights on and people clothed and fed, with a mixture of jobs, electricity and aid.

At the same time, Akhmetov operates factories on the other side of the frontline, powering Ukraine's economy and pouring hundreds of millions in taxes into government coffers. His steel products, which are finished in rebel territory, are then shipped to the West — where they bring in billions in revenue for Akhmetov that then indirectly props up the separatist government.

The billionaire is able to straddle the frontline by using his fortune and business empire as leverage. His companies provide more than 300,000 jobs across Ukraine, most in the rebel-held east. Meanwhile, his control over utilities that provide electricity and heating to both sides allow him to dictate terms to the government as well as the rebels. Cracking down on Akhmetov's factories in government territory would threaten Ukraine's depressed economy, while a collapse of utilities in the east would undermine the rebels' grip on power.

It makes for a striking picture of economic cooperation between enemy areas: Coal produced in Krasnodon mines, on rebel territory, travels to the Avdiivka coking plant on the government side. Coke is then shipped back to rebel lands, to a metals smelter in Yenakieve, and the metals produced there are transported to government territory on the Azov Sea — for shipping to the West.

Guyana says Venezuela deploys troops to disputed border

By Bert Wilkinson

GEORGETOWN, Guyana (AP) — Guyana's President David Granger said Tuesday that

Venezuela has deployed troops to a contested border region in what he called a "dangerous" escalation of a long-running dispute between the South American nations.

The government of President Nicolas Maduro made "extraordinary military deployments," along what Guyana considers its western border, Granger told reporters.

He called the development a "hostile and aggressive" step in a border dispute that dates to the 19th century but has grown more heated over the past year following a major off-shore oil discovery in waters claimed by both nations.

"We feel that Venezuela is treading a dangerous course at this point in time rather than seeking a peaceful resolution of the matter," Granger said. "Venezuela seems to be pursuing a very offensive and aggressive course."

Swedish utility Vattenfall sells its German coal plants

STOCKHOLM (AP) — Vattenfall AB says it is selling off its German coal plants, a major source of greenhouse gases, and its mining assets as the Swedish utility seeks to adjust its energy strategy.

The company says potential buyers can bid for four power plants as well as corresponding mining activities. Buyers can also bid for 10 hydropower plants, adding that these power plants will not be sold separately.

Tuesday's move comes after Vattenfall had made large write-downs related to its operations in Germany. The Swedish government also has pressured the company to exit its coal-fired power generation in Germany.

Vattenfall stressed it "remains fully committed" to its other energy operations in Germany including district heating, electricity distribution and wind energy.

Subject: VW Recall

I drive a 2012 VW TDI that is in my opinion not road worthy and should be illegal to drive due to VW's management's decision to cheat regulators repeatedly. This vehicle could not have been sold to the market otherwise.

The VW practices are anti-competitive (other manufacturers lost market share as they couldn't pass emissions), endanger health, suppress research, and force other US companies to loose jobs. They have used the government resources to cheat others into spending countless dollars into clean technology. Because of their deceptive strategy they were able to improve market share on the backs of the tax payers - as there were incentives to buy these vehicles.

I believe that this behaviour is as bad as it gets. Please keep in mind all of the above and understand that the VW would not be the company it is today had they not cheated.

Would you please do the right thing and do what you can to help prosecute VW to the fullest extent of the law.

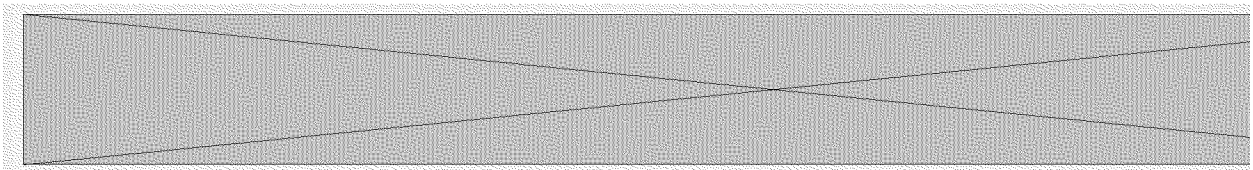
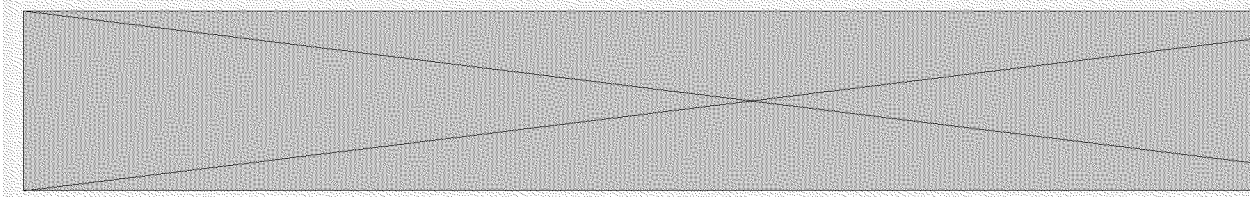
Sent: Tue 9/22/2015 11:08:22 PM
Subject: Overnight Energy & Environment: Clinton is a 'no' on Keystone





CLINTON COMES OUT AGAINST KEYSTONE: Hillary Clinton finally broke her silence on the controversial Keystone XL pipeline Tuesday, saying she opposes the project.

America has the lowest gasoline prices anywhere in the world. That boosts household budgets by billions of dollars. See how exporting crude would lead to higher fuel prices and hurt our economy. http://crudecoalition.org/resources/studies/

SPONSOR-GENERATED CONTENT

At a campaign event in Des Moines, Iowa, focused on prescription drugs, Clinton responded to an audience question on the matter.

"I think it is imperative that we look at the Keystone pipeline as what I think it is, as a distraction to the important work we have to do on climate change," Clinton said. "And unfortunately, from my perspective, on that interferes with our ability to move forward with all the other issues."

"Therefore I oppose it," she said. "I don't think it's in the best interest to combat climate change."

Her statement came after months of goading from environmentalists, who saw her silence on the Canada-to-Texas pipeline as damning.

She previously avoided weighing in by invoking her past role as Obama's secretary of State, where she had a leading role in reviewing the proposal.

But Clinton, and greens, had grown increasingly frustrated with Obama's timeline on his decision. Clinton said she had to speak up.

Greens cheered Clinton's statement Tuesday, while Republicans pounced on it as an opportunity to show that she's siding with left-wing extremists.

SENATE DEMS SEEK 'CLEAN ENERGY FUTURE': Senate Democrats unveiled their proposal for an energy policy overhaul Tuesday.

The multi-pronged approach focuses on incentivizing the development and deployment of clean energy, shifting tax breaks away from fossil fuels and toward low- and zero-carbon energy and setting national targets for reducing greenhouse gases.

"It is a technology-driven pathway to a clean energy future, and by tackling energy efficiency ranging from everywhere from trucks, buildings, to our electricity grid, to energy innovation, it basically takes the most important opportunities for reducing carbon, creating jobs, and moving us forward to help consumers have better choices," Sen. Maria Cantwell (D-Wash.) said Tuesday at a news conference in the Capitol.

The bill doubles as a way to criticize the GOP for energy policies that Democrats say focus far too much on fossil fuels.

Volkswagen isn't hiding from its emissions cheating scandal, which the company now says affects some 11 million diesel cars worldwide.

As of earlier today, All consumer and general public inquiries are going to otaq@epa.gov and Jennifer France. I do not know just how she is responding. I see no problem acknowledging receipt and explaining that we are passing along. That said word from the IO was that we should avoid handling these inquiries as possible.

Subject: VW Recall

I drive a 2012 VW TDI that is in my opinion not road worthy and should be illegal to drive due to VW's management's decision to cheat regulators repeatedly. This vehicle could not have been sold to the market otherwise.

The VW practices are anti-competitive (other manufacturers lost market share as they couldn't pass emissions), endanger health, suppress research, and force other US companies to loose jobs. They have used the government resources to cheat others into spending countless dollars into clean technology. Because of their deceptive strategy they were able to improve market share on the backs of the tax payers - as there were incentives to buy these vehicles.

I believe that this behaviour is as bad as it gets. Please keep in mind all of the above and understand that the VW would not be the company it is today had they not cheated.

Would you please do the right thing and do what you can to help prosecute VW to the fullest extent of the law.

Cc: "Kelley, Rosemarie" <Kelley.Rosemarie@epa.gov>, "Belser, Evan" <Belser.Evan@epa.gov>
Subject: Summary of today's call with HEC Oversight staff

The following is a summary of today's call with staff from the House Energy and Commerce Committee's Oversight Subcommittee. Republican and Democratic Staff participated in the call and Peter Spencer (Majority counsel) asked most of the questions. Present from OECA: Evan Belser, Rosemarie Kelley, John Senn, and Caroline Emmerson; OTAQ: Bryon Bunker, Janet Cohen, and Ben Hengst; and OCIR: Josh Lewis.

The focus of the scheduled 30 minute call was the EPA's September 18, 2015 NOV to VW. Summary of Q & A:

- What is the timeline for this issue? How did you find out about it? Evan summarized the statements from the NOV, p.4,

"CARB and the EPA were alerted to emissions problems with these vehicles in May 2014 when the West VA University's Center for Alternative Fuels, Engines and Emissions published the results of a study commissioned by ICCT…"

- What is ICCT? Bryon discussed ICCT's mission and contact with CARB and EPA; VW's recall; and additional testing of the vehicles by CARB and EPA per the

NOV (p. 4). Byron also mentioned that VW's US arm was looking for a technical problem and did additional testing. He said that it was clear that the recall did not address the emissions problems. OTAQ coordinated with the CARB team so there was not duplicative testing.

- Did VW make any statements about what they were doing? Was it a ruse? Evan said that any statements about what they were doing is speculation.

- Why didn't the OBD system catch this problem? Byron explained that the OBD should catch the defects and the check engine light did not go on.

- If the tailpipe emissions were high, why weren't the cars failing state emissions tests? Byron said that many state emissions tests only query the OBD system, so that's why the problem was not detected. It is yet to be confirmed, but it could be that the defeat device evaded state tests involving actual emission testing (it just evaded the federal test). EPA and CARB would not approve certificates of conformity for VW's 2016 model year diesel vehicles without an explanation of this issue.

- Committee staff pressed for information about how VW's defeat devices worked and asked: What statements did VW make when they came clean about these devices? Did they share any knowledge? What were they hoping to gain? Was it better engine economy? Evan replied that we can't provide answers beyond what's stated in the NOV. We are looking in to why they did it as part of our investigation. VW admitted to having a defeat device and acknowledged that defeat devices are illegal.

- Who were the people that you were interacting with regarding this matter? Byron said that VW's US arm was the conduit for the information from the manufacturer and his office talked with a mix of German and US employees.

- When the US VW office interacted with EPA, did they seem to have technical knowledge of what's going on?

Bryon responded that the question is speculative and he did not answer.

- What are you all doing now? Evan said that we are running an investigation, assessing liability and figuring out remedies. Byron said that we are figuring out what vehicles may be recalled and how they will get fixed.

- Committee staff asked about other defeat device cases, and mentioned the 1998 engine cases. Evan mentioned that there have also been smaller cases involving aftermarket parts and software.

- Is there such thing as an accidental defeat device? Evan replied that we need to prove that they knew they are violating the law but not their intent.

- What is the next step? Evan responded that the NOV offers VW an opportunity to confer.

- How will the recall impact the performance of the vehicles? Byron said that the focus right now is finding the right remedy and consideration of other aspects is speculative at this point. Any recall will take into consideration the environmental benefit, technical feasibility, and the customer's experience.

- How will consumers be advised about this matter: Byron mentioned the Qs &As on OTAQ's website.

At the conclusion of the call, Peter Spencer mentioned the upcoming HEC Oversight hearing and his need to advise his Members of the best way to proceed. He said that he will probably will be talking with us again and might want to meet in person.

Evan and Byron,

Thanks for handling the bulk of the call today, and thanks to others for participating as well. Sounds like there will be additional requests for calls or information (or both), so will let you know when those come in. In the meantime please call if you have anything you want to discuss regarding the call today or related issues.

Subject: hey

I am writing a tick tock of how this went down for Thursday

Did you see this in WSJ -- just got posted

In early August, a senior Volkswagen official flew from Germany to an automotive conference in Traverse City, Mich., to meet with a U.S. executive for the auto maker and a top California regulator to discuss the discrepancies, said a person familiar with the matter. At a resort in the northern Michigan town, suffering from power outages from an intense thunderstorm, the Volkswagen officials repeated claims that the failing emissions tests were the result of technical problems.

California regulators continued questioning Volkswagen about the higher emissions. In August, at a transportation and energy conference in Pacific Grove, Calif., a U.S. Volkswagen official approached the senior California regulator again, this time with a disclosure: The German auto maker had been using defeat devices to circumvent emissions tests, one of the people said.

On Sept. 3, California regulators, EPA officials and Volkswagen officials convened a conference call. Volkswagen gave a detailed presentation showing nearly a half million cars sold since 2008 had dual-calibration software allowing vehicles to meet emissions tests but pollute more during normal driving conditions, one of the people said.

Even after that call, Volkswagen pleaded for certification of its 2016 models, claiming it had swelling inventories that it needed to get to showrooms, the people said. Regulators refused.

Subject: You may have already seen this one

Jalopnik: Inside The Most Awkward Volkswagen Party In The World
9/22/15 6:15pm

At any big, flashy new car release, you expect to be accosted by public relations people all wearing name tags. "How do you like it?" they normally ask, or "Isn't this exciting?" After I spent a few minutes milling around the entrance to the unveiling of the Volkswagen Passat last night, a security guard walked up to me. "Are you supposed to be here?"

I wasn't sure how to answer that question. In fact, I wasn't sure any of us were supposed to be there.

Three weeks ago, the German car company invited us, and seemingly every other New York-based auto journalist, to the unveiling of the new 2016 Volkswagen Passat at a big warehouse at the Brooklyn Navy Yard. It was the same place where the Cadillac CT6 was unveiled, but unlike that party, none of us really wanted to go at the time. This is, after all, the Passat we're talking about here, not the Bugatti Veyron successor.

One of us actually just wanted to reply to the invite with "thanks," and a simple link to the much nicer European version of the car, which we had already seen a while ago.

But that was before we knew that Volkswagen had deceived regulators across the world and the car-buying public for years by rigging cars to massively cheat on emissions tests. Before we knew about the criminal and the Congressional investigations. Before we knew that a whole bunch of people were about to get fired. But the Passat reveal party had to move forward; like a wedding, it could not be canceled, because Aunt Mabel was flying in from Seattle and they already bought all the meat.

So in the end, instead of swarming with the place with the hard-nosed *Jalopnik* beat reporters that we regularly employ, I somehow drew the short straw. Despite our best last-minute efforts to get as many people into the party as possible, I would be the only one going from our team.

And in fairness to the security guard, at that exact moment I did look pretty out of place. Volkswagen had hired a bunch of water taxis to take the vast majority of the people from Battery Park to the Navy Yard. Most of the time, these things feel like the pre-game to a booze cruise. But I had a car, so I figured I'd just drive in, through the back entrance.

Through the back entrance, there were no other journalists. Just guys from local dealers, who laughed at random jokes but then seemed to go way too quickly back to very nervous faces.

But after a half hour of the event staff politely, but firmly denying my pleas to get beyond the entrance area and into the main event, Doug DeMuro finally showed up, and they finally let us in to the big room where the reveal party was located. (You're probably wondering why Doug got in, even though I just said they weren't letting any extra *Jalops* in. All I can say is that the Doug works in mysterious ways, but also occasionally does freelance for other publications.)

And it was a big room. A vast, empty room. Large enough to fit several elephants that no one from Volkswagen wanted to discuss at the moment.

There's a weird feeling that you get when you're at a party that's highly inappropriate. No one throwing it really feels like celebrating much, and everyone sort of looks at the floor or pretends to be Very Busy with something. All the invited guests – in this case, the journalists – make horrible, dark jokes about what's been going on. Maybe it should've been canceled, everyone thinks.

But it was not canceled, so everything just sort of goes on, without anyone acknowledging everything that's happening. Which isn't to say we didn't try to acknowledge it. Any Volkswagen staffer I could find, which is to say, every person that I asked if they worked for Volkswagen, could only offer a firm, polite "no comment," along with a firm, polite, and icy glare, from the booth professionals to the suits.

We milled around for an hour or so, listlessly or boisterously depending on how much of the VW-supplied alcohol we'd gone for while black-shirted waiters and waitresses tried to offer us a constant stream of miniature crab cakes. They had the ostensibly mandatory televisions, displaying tweets with the ostensibly mandatory hashtag for the night. They didn't post my tweets to the televisions, no matter how hard I tried.

It was lot emptier than I, and probably Volkswagen, expected. The room wasn't getting any smaller, and it wasn't filling up as fast as these things usually do. When there's something to be celebrated, people like to celebrate. When the only thing being celebrated is a mid-cycle refresh, accompanied by a scandal of massive proportions, intention, and deceit, I guess people don't really feel like showing up to celebrate.

I didn't have any of the crab cakes.

After an hour of what felt like interminable mingling, Volkswagen USA CEO Michael Horn finally arrived. And, like any gracious and exuberant party host, he began by proclaiming his company's own dishonesty, and proclaiming its mistakes:

"In my German words, we totally screwed up," he said. A single person clapped.

To be honest, it was almost refreshing to hear this Reaganesque *mea culpa*. Though it was almost wholly unsatisfying in what wasn't said. No questions were allowed, even though we were all wondering variations on similar themes. *Who knew about this?*

When did they know about this? Surely you, personally, had to have known about this? Why did you do it? How could you think you wouldn't get caught? How long did you think this would go on? Why didn't one of your competitors, who buy up your cars to endlessly study them, X-ray them, take them apart and test them six ways to Sunday, blow the whistle in the supposedly "ruthless" automotive business?

We didn't get any answers. Because in the world of Volkswagen, when you're staring down the barrel of an investigatory gun but you're still throwing one of the biggest parties in New York, we were "only here to talk about Passat."

And once Horn was finished issuing his apologies, music started blaring and three Passats immediately rolled out. One white R-line, one silver example in a basic trim, and a blue diesel model.

Not much was said about the diesel.

We all performed the requisite kabuki of getting live photos of the cars, even though most of the writers there had already agreed to embargoes and had seen photos of the car hours ago, scheduling articles on it to go live even before Horn had finished reading off of the press release. The ritual continued unabated.

They left the cars out, rotating silently on three little stands. After the first 15 minutes, most stopped crawling all over a vehicle that was already too familiar. We had been told Lenny Kravitz was playing, and by then, when we realized none of our questions truly would be answered, and there was nothing of this car that was going to light our hair on fire, was the only reason for staying much longer.

After an hour, Lenny finally showed up. He brought the house down. He was a professional. He earned the money I'm sure he was paid. He shoved his guitar-crotch into the face of a poor model Volkswagen had paid to be there.

did you see this in the WSJ that posted tonight? I am doing a tick tock for Thursday

In early August, a senior Volkswagen official flew from Germany to an automotive conference in Traverse City, Mich., to meet with a U.S. executive for the auto maker and a top California regulator to discuss the discrepancies, said a person familiar with the matter. At a resort in the northern Michigan town, suffering from power outages from an intense thunderstorm, the Volkswagen officials repeated claims that the failing emissions tests were the result of technical problems.

California regulators continued questioning Volkswagen about the higher emissions. In August, at a transportation and energy conference in Pacific

Grove, Calif., a U.S. Volkswagen official approached the senior California regulator again, this time with a disclosure: The German auto maker had been using defeat devices to circumvent emissions tests, one of the people said.

On Sept. 3, California regulators, EPA officials and Volkswagen officials convened a conference call. Volkswagen gave a detailed presentation showing nearly a half million cars sold since 2008 had dual-calibration software allowing vehicles to meet emissions tests but pollute more during normal driving conditions, one of the people said.

Even after that call, Volkswagen pleaded for certification of its 2016 models, claiming it had swelling inventories that it needed to get to showrooms, the people said. Regulators refused.

TOP NEWS

VW Says Emissions Fraud Affects 11M Vehicles

Volkswagen AG announced Tuesday that it installed software designed to circumvent emissions standards in 11 million diesel vehicles worldwide, and estimated the cost of a service program to remove the so-called "defeat device" at €6.5 billion ($7.2 billion) for the third quarter of fiscal year 2015.

After 3 Months, NY Court Junks NYC Styrofoam Ban

The Supreme Court of the State of New York vacated a recent ban on styrofoam containers in New York City Monday ruling that a determination from the city's sanitation department on the economic feasibility and environmental effectiveness of recycling the containers was arbitrary and capricious.

Nev. High Court Diverts General Moly Water Use Plan

Nevada's high court has reversed a state court's refusal to review a move by a state engineer to approve a massive water-usage plan contemplated by General Moly Inc. that would allow it to operate a mining project, finding the evidence shows the plan would completely deplete senior water rights.

Colo. Supreme Court To Rule On Local Fracking Ban

The Colorado Supreme Court on Monday agreed to hear an appeal from the city of Longmont, which voted in 2012 to block fracking, in a case that could settle the hotly disputed question of whether such local ordinances are legal or whether they are preempted by state regulations.

No ESA Listing For Greater Sage-Grouse

The U.S. Fish and Wildlife Service said Tuesday that the greater sage-grouse does not require protection under the Endangered Species Act, a win for the energy industry, ranchers and other landowners in the West.

Sage-Grouse Decision To Test Collaborative Conservation

The U.S. Fish and Wildlife Service's decision Tuesday to not list the greater sage-grouse as an endangered species speaks volumes for collaborative conservation, but experts say the ultimate outcome of such an approach remains to be seen.

POLICY & REGULATION

DOT Connected Car Program Revs Up In NY, Fla., Wyo.

The U.S. Department of Transportation unveiled three connected vehicle pilot programs Tuesday — in New York City, Tampa, Florida, and the state of Wyoming — ramping up the agency's efforts to encourage widespread use of the technology that allows vehicles to communicate with each other to promote safety and reduce emissions.

Regulators To Speed Up Infrastructure Project Reviews

The nearly dozen federal agencies that sign off on infrastructure projects, such as major transit developments, bridge repairs and airport capital improvements, will move faster to approve permits and conduct environmental reviews under a new batch of initiatives the Obama administration revealed Tuesday.

Blackfeet Nation Gets US Panel's Backing In Oil Lease Row

A federal panel recommended canceling Solenex LLC's oil and gas lease on land sacred to the Blackfeet Nation near Glacier National Park in northwest Montana, finding Monday that the area is "of premier importance" to the tribe's religious and cultural traditions.

US Trade Rep Releases Detailed TPP Goals Across All Areas

In an effort to calm the ongoing rancor over a lack of transparency in the Trans-Pacific Partnership talks, the U.S. Trade Representative's office on Tuesday published a detailed list of its negotiating objectives for the entire accord, including within persistently thorny areas such as labor, the environment and intellectual property.

Mont. Tribal Council Opposes $403M Coal Railroad

The Northern Cheyenne Tribal Council on Monday reportedly voted to oppose plans by a BNSF Railway Co. and Arch Coal Inc. partnership to build a $403 million railroad to transport coal in southeastern Montana, fearing the environmental and cultural impact of the project.

Volkswagen was hit with at least nine more class actions on Monday and Tuesday by U.S. drivers seeking damages for diesel-burning autos that the manufacturer touted as environmentally friendly but the U.S. Environmental Protection Agency recently revealed were designed to fool emissions tests.

3rd Circ. Grants En Banc Rehearing In Banana Workers' Suit

The Third Circuit on Tuesday granted an en banc rehearing of its decision that banana plantation workers engaged in forum shopping by filing two suits in different districts accusing Dole Food Co. Inc., Chiquita Brands International Inc. and others of exposing them to harmful pesticides.

ExxonMobil Deal Detractors Keep Pushing To Join Suit

An environmental attorney told a New Jersey judge on Tuesday that joining the state's contamination lawsuit against ExxonMobil Corp. is his clients' only option in the case's post-decision stage to appeal the $225 million settlement, which they claim undervalues the natural resource damages.

Dow Chemical Fights BASF Bid To Gut Texas Superfund Suit

BASF Corp. can't escape a Superfund cleanup suit, The Dow Chemical Co. told a Texas federal judge Monday, saying that federal and state law claims can coexist and that negligence claims can stem from environmental laws.

Insurer Can't Seek $2.2M Oil Spill Cleanup Costs, Judge Told

American Overseas Marine Co. shot back Tuesday against a Boston boat repair company's insurer in a fight over a $2.2 million oil spill, telling a Massachusetts federal court that the insurer cannot collect money for the cleanup since AMSEA too was covered on the repair company's policy.

Tribe Awarded 17K Lbs. Of Clams From Shellfish Grower

A Washington shellfish grower must repay more than 17,000 pounds of Manila clams to the Squaxin Island Tribe after a federal judge found Monday that the grower unlawfully deprived the tribe of harvesting its treaty share of clams in the Southern Puget Sound.

Senate Democrats Announce Clean Energy Legislation

A group of Senate Democrats, led by Sen. Maria Cantwell, D-Wash., on Tuesday introduced a bill that lays out a Democratic vision for the country's energy future, including cutting carbon pollution, providing tax incentives for clean energy and offering research funding.

SolarCity Says Contractor Hid Fraud Before $45M Project

A SolarCity Corp. contractor allegedly covered up a history of fraud before agreeing to and then abandoning a $45 million contract to help build solar power systems in Massachusetts, SolarCity alleged in federal court Monday.

Property Pooling Pits Ohio Municipalities Against State

The Franklin County Court of Common Pleas' ruling in Simmers v. City of North Royalton that the mandatory pooling of property cannot be approved without evidence that safety and other intangible concerns were considered is the most recent battle between Ohio municipalities and the state over the power to regulate oil and gas drilling and related operations, says Carter Strang of Tucker Ellis LLP.

LEGAL INDUSTRY

Trial Ace: Steptoe's Michael Dockterman

During nearly 40 years in the courtroom, Steptoe & Johnson LLP partner Michael Dockterman has nimbly blended old-school and new-school techniques, at times deploying his towering 6-foot-4 persona during blistering cross-examinations and charming judges with testimony from stuffed animals.

3 Ways Law Firms Goose The Bills

Even when clients are going over their bills with a magnifying glass, firms have ways to make the numbers say what they want them to say. Here's how they do it.

1 In 4 Law Firms Are Victims Of A Data Breach

Almost half of attorneys say their firms have no data breach response plan in place, even though an American Bar Association survey has found that one in four law firms with at least 100 attorneys have experienced a breach due to a hacker, website attack, break-in, or lost or stolen computer or smartphone.

Mintz Levin IP Atty Sanctioned For 'Bullying' In Divorce Case

A Mintz Levin Cohn Ferris Glovsky & Popeo PC patent attorney was sanctioned $10,000 after a New York state judge found he flouted the rules of professional conduct by attacking attorneys, witnesses and even judges while representing himself in a divorce from his wife, a patent attorney at Weil Gotshal & Manges LLP.

Stephen Colbert's Brother To Helm IP Shop Kenyon & Kenyon

Edward T. Colbert, noted intellectual property lawyer and brother of the host of "The Late Show with Stephen Colbert," has been elected managing partner of Kenyon & Kenyon LLP, taking the reins of the IP boutique he has been with for more than two decades, the firm announced Monday.

Philly Firms In Papal Crosshairs Aim To Minimize Disruption

Leaders of some of Pennsylvania's most prominent law firms are rolling out contingency plans to ensure that work for their clients is not hampered even as they prepare to close their doors Friday in response to security measures taking effect for Pope Francis' historic visit to Philadelphia this weekend.

On eve of methane hearings, oil industry touts GHG investments

By Kevin Rogers

The oil industry is seeking to highlight its investments in greenhouse gas emissions reductions as the Environmental Protection Agency begins soliciting public input on regulations to cut methane emissions by as much as 45 percent over the next decade.

In a report released Tuesday, the American Petroleum Institute touted $90 billion in total industry GHG mitigation investment from 2000 to 2014. The investments included

renewable energy technology, efficiency upgrades, methane and carbon capture efforts and increased use of cleaner-burning fuels.

The report, conducted by T2 and Associates, based its findings off of industry documents, federal reports and other public data. According to the findings, the oil and gas industry was only bested by the federal government, which invested $110.3 billion over the 14-year period.

The report comes as EPA is set to kick off three hearings on its rule to reduce methane, a short-lived but potent greenhouse gas, at new and modified oil and gas infrastructure. The rules would also put new limits on sector emissions of volatile organic compounds, which are chemicals emissions that pose cardiovascular and cancer risks.

EPA has hearings planned in Denver and Dallas this week, and Pittsburgh next Tuesday.

Though API President Jack Gerard said the report wasn't intended to coincide with EPA's public hearings, he told reporters on a call that it would be part of API's case against the regulations.

"We will be testifying on some of the data we've talked about today," he said. "There's something very important taking place today, and it goes right to the heart of those hearings. It's the policy the administration is pushing, which we believe are counterproductive to our ability to not only reduce emissions but to create high-paying jobs to benefit all consumers."

Gerard pointed to EPA's own figures highlighting a 79 percent reduction in methane from hydraulically fractured wells from 2005 and a 38 percent reduction from total natural gas production from 2005 to 2013 as proof that voluntary efforts were working.

EPA, in a statement, defended the proposal as a necessity to combat climate change and protect health.

"EPA has proposed a suite of commonsense requirements that together will help address climate change, reduce air pollution that harms public health, and provide greater certainty about Clean Air Act permitting requirements for the oil and natural gas industry," the agency said.

Gerard, however, expressed doubt that the agency was properly corresponding with the Bureau of Land Management, which is moving forward on its own proposal to reducing natural gas flaring from federal oil and gas production sites. He said the agencies could end up putting out conflicting regulations that would only reduce certainty for the industry.

"We wish we had more confidence that the government is talking to itself, that the left hand knows what the right had is doing, but to date we don't have that confidence," he said. "So one of the things we will be articulating as part of this hearing process is that we hope the federal government is talking to its sister entities."

API's calls for more voluntary efforts to reduce methane drew criticism from Lena Moffitt, director of the Sierra Club's Dirty Fuels campaign. While she hadn't reviewed the report, she said the arguments API made were a tired effort to evade the new regulations.

"It's a pretty predictable response from the American Petroleum Institute in advance of the hearing, and it doesn't jive with the fact that voluntary measures just aren't enough," she said.

"While there have been a few years in the past where emissions from the sector may have decreased, that very well could be from regulations that EPA issued in 2012," she continued, referencing the agency's rules to limit emissions of volatile organic compounds.

Moffitt will represent the Sierra Club at the Pittsburgh meeting, though she said the group would be out in "full force" on Wednesday in Denver and Dallas. The group plans a rally in Denver alongside Native American groups and other environmentalist organizations.

"We see this as a key opportunity and we'll be out in full force to support them and urge the EPA to go further," she said. "We think it's clear that the magnitude of the problem in terms of methane emissions is huge and absolutely warrants these commonsense protections from EPA."

Climate change high on agenda as Pope, Obama meet in Oval Office

By Nancy Benac and Nicole Winfield

WASHINGTON (AP) — In a moment weaving strands of politics, religion and emotion, Pope Francis and President Barack Obama are set to meet in the grandeur of the Oval Office to advance causes -- like the fight against climate change -- that are dear to them both.

Eagerly watching will be a nation that cannot get enough of Francis, a humble man rejuvenating American Catholicism while giving heartburn to its conservatives.

The pope was to deliver his opening remarks to the United States on the White House lawn on Wednesday morning and speak to America's bishops later. That speech was highly anticipated, given a certain disconnect between Francis' focus on social justice and a merciful church and the culture wars that America's bishops have waged in recent years over abortion and gay rights.

From the instant the white-robed and broad-grinned Francis landed in the U.S. on Tuesday, doffed his skullcap in the breeze and got into a modest, charcoal-gray Fiat, his visit electrified wonky Washington, which can be jaded about the comings and goings of world figures.

Judge overturns New York City ban on plastic foam containers

By Jake Pearson

NEW YORK (AP) — A state judge has overturned New York City's ban on plastic foam containers, finding the nearly 30,000 tons of dirty meat trays and to-go cups now sent to landfills can be recycled in a cost-effective way, according to a decision made public Tuesday.

The ban went into effect July 1 after lawmakers voted in 2013 to approve it unless a yearlong inquiry found the foam could be effectively recycled. An industry group of manufacturers, recyclers and restaurant-owners then sued, arguing that the ban was based on politics, not policy, and that recycling was feasible.

The environmental initiative was spearheaded by former Mayor Michael Bloomberg, an independent, and supported by current Mayor Bill de Blasio, a Democrat.

But state Supreme Court Judge Margaret Chan ruled that Department of Sanitation Commissioner Katheryn Garcia didn't properly take into account industry estimates of the market and recycling opportunities generated during the yearlong review period when she decided that plastic foam couldn't be recycled economically and in an environmentally friendly way.

Investment treaty between China and US key business goal

By Gene Johnson and Phuong Le

SEATTLE (AP) — When Chinese President Xi Jinping addresses a meeting of some of the top names in Chinese and American business Wednesday, they may be most interested what he says about progress toward a treaty between the nations that would provide a framework for broader investment in each other's economy.

Apple Chief Executive Tim Cook, Microsoft's Satya Nadella, Amazon's Jeff Bezos, investor Warren Buffett and Jack Ma of Chinese e-commerce giant Alibaba are among the 30 top executives attending a closed-door discussion being moderated by former U.S. Treasury Secretary Henry Paulson, who has advocated for such a treaty. All of the American CEOs participating signed a letter to Xi and U.S. President Barack Obama urging them to support an agreement.

Bilateral investment treaties provide the rules of the road for companies doing business in other countries, and can help ensure that the rights of foreign investors are protected and that foreign companies operate on a level playing field with domestic ones. An agreement with

China would open up more of that nation's massive market to American companies, provide clearer rules for Chinese investment in the U.S., and create jobs on both sides, supporters say.

Such treaties "can be a powerful catalyst for more economic growth," Evan Feigenbaum, vice chairman of the Paulson Institute, which is co-hosting Wednesday's meeting, said Tuesday.

Lawsuits filed over VW emissions scandal

By The Associated Press

BERLIN (AP) — Several law firms are filing class action lawsuits against Volkswagen over its admission that it used special software to get its cars to pass U.S. emissions tests.

Clifford Law Offices, based in Chicago, said it is filing a complaint to the Northern District of Illinois alleging that VW engaged in deceptive and fraudulent business practices.

Meanwhile, law firm Sutts, Strosberg LLP, based in Windsor, Canada, was reported in local media to have filed a class action lawsuit seeking $1 billion in damages and $100 million in punitive damages.

In Germany, the head of the main industry lobby organization is calling for "transparency, openness and speed" in getting to the bottom of the Volkswagen emissions scandal.

More

Exposing vehicle emissions problems not new for university

By John Raby

CHARLESTON, W.Va. (AP) — A West Virginia University research unit that helped expose Volkswagen AG's smog-test scandal was involved in another emissions test two decades ago with similar results involving polluting trucks.

In October 1998, the WVU Center for Alternative Fuels, Engines and Emissions discovered that more than 1.1 million trucks whose heavy-duty diesel engines had passed emission inspections at the factory were polluting much more than allowed because of devices designed to overcome emissions controls, Dan Carder, interim director of the unit, told The Associated Press on Tuesday.

The Justice Department publicly announced the findings, after which several manufacturers agreed to a $1 billion settlement.

In the Volkswagen case, the WVU research team was hired by nonprofit pollution control advocate International Council on Clean Transportation to measure emissions on three cars: a 2012 VW Jetta, a 2013 VW Passat and a BMW X5 SUV.

Judge denies Peabody Energy's request to strike protest song

By Ben Neary

CHEYENNE, Wyo. (AP) — A federal judge in Wyoming says it's tough luck that the world's largest private coal company doesn't dig a 1970s-era protest song.

U.S. Magistrate Kelly Rankin in Cheyenne rejected a request by Peabody Energy Corp. to strike lyrics from singer-songwriter John Prine's "Paradise" from a federal lawsuit against the company. Prine's 1971 song criticized Peabody's mining activities in Kentucky.

Environmental activists Thomas Asprey and Leslie Glustrom, of Boulder, Colorado, claim in their lawsuit that the company violated their civil rights by having them arrested outside a 2013 shareholders meeting in Gillette. The company denies their claims.

Dear Mr. Kaul,

As a chief reporter with Europes biggest weekly BILD am Sonntag, I have a question in addition to your Notice of Violation (sept. 18 2015).
Did EPA communicate with the Volkswagen board in Germany on the topic or did you only communicate with Mr. Geanacopoulos and Stuart Johnson of VW of America?
Could you also tell me, if the VW Passat models had a SCR Cat?
How many cars did you really test?
And finally, did you test any Mercedes cars meanwhile?

I look forward to hearing from you.

Best regards

EU says 'premature' for Volkswagen scandal probe

AFP, 22 September 2015 - The EU on Tuesday said it was too early to launch a European investigation into whether Volkswagen has cheated in pollution measuring tests after shock revelations in the United States. "We are taking the matter very seriously," European Commission spokeswoman Lucia Caudet said in an email to AFP, adding that Brussels was in touch with Volkswagen and US authorities. "Investigations are ongoing within Volkswagen as well as in the US and in Germany. Therefore, it is premature to comment on whether any specific immediate surveillance measures are also necessary in Europe and whether vehicles sold by Volkswagen in Europe are also affected," she said. "We need to get to the bottom of this," she added. The European Commission, the EU's regulatory arm, is responsible for setting pollution limits on cars and defining testing procedures, but has no control over enforcement, which is left to national authorities.

EU Delays Heavy-Duty Vehicle CO2 Measure Up to Two Years

Posted September 22, 2015, 12:37 P.M. ET

By Stephen Gardner

A European Union measure on carbon dioxide emissions from trucks and other heavy-duty vehicles, originally slated for publication this year, will not be proposed until 2016 or 2017, the European Commission confirmed to Bloomberg BNA today.

The commission, the EU's executive arm, had said in May 2014 that it would propose legislation that would require heavy-duty vehicle manufacturers to monitor and report fuel efficiency and carbon dioxide emissions data during 2015, as a preliminary step ahead of possible carbon dioxide emission limits for vehicles such as trucks and buses.

Unlike the United States, which put in place a greenhouse gas emissions standard for heavy-duty vehicles in 2011, the EU has no harmonized measure for truck carbon dioxide emissions, though it has emissions limits that must be met by passenger cars and light vans.

A new report from environmental advocacy group Transport & Environment said heavy-duty vehicle emissions represent 30 percent of greenhouse gas emissions from transport in the EU, and 5 percent of total EU emissions.

The VW media coverage has been non-stop here. The news hour had a big segment yesterday that was very well informed. Something every day on NPR. Looks like other diesel manufacturers are doing diagnostics on their fleet to verify that similar software does not exist in their cars (in advance of anyone asking).

Notice any blocked sites since you have been there?

Dear Mr. Belser

Regarding the Volkswagen issue Mr. Olechiw provided the information, that you are the responsible contact person at EPA. Together with my colleague Stephan Redman and colleagues from our type approval agency (KBA) we are very much interested in a phone conference with you. Would it be possible for you to have such a phone conference this Friday (25th).

Thanks in advance.

Hello Stephan!

I can imagine that this has caused quite the stir in Germany. You can reference the Notice of Violation that we sent to VW: http://www3.epa.gov/otaq/cert/documents/vw-nov-caa-09-18-15.pdf

This should help answer some of your questions. For now you may contact Evan Belser here at EPA. (Belser.evan@epa.gov, 001-202-564-6850)

If you would like to talk this morning, I am available after 3 PM your time.

Best Regards,

Mike

Dear Michael,

how are you? You may imagine that the EPA case against Volkswagen regarding use of defeat devices is causing some turbulences here in Germany.

KBA – the German type approval authority – is currently investigating the case. Of course they are in direct contact with Volkswagen, but currently most of our information is still based on press announcements. Therefore I would like to ask you whether US EPA can provide us more information.

If you are not involved can you please provide us the right contact persons for an official request?

Best regards

Stephan

Cc Ex. 6
Subject: VW, GMC, Ford

Mr Albores:

It is my understanding that there is other car companies clearly violating EPA standards and only VW has been caught. It is quite obvious that For and GMC are doing the same in front of the naked eye. If you pay attention to GMC and Ford Diesel equipped heavy duty trucks the all have a design at the end of the muffler that provide for some fresh air to be pulled and directed to the tip of it where you would normally install the Mono-Nitrogen oxides (NOx) sensor. Common sense tells you that this "fresh" air will impact the emissions test positively, but, are these vehicles really being environmentally friendly?

Best Regards:

Subject: RE: Christy's response to my CROMERR question based on our discussion

Yeah, I would. But, if the agency allows the manufacturers to have their staff responsible for preparing the submittals attest that all of the information meets the regulatory and legal requirements under the Clean Air Act, when clearly those staffers have no authority or responsibility over the work performed to develop the application, then, it seems to me you would clearly not be at risk personally. However, you, or anyone that would sign I think would want to understand that it seems like the days of not holding individuals within corporations responsible may be coming to an end.

Subject: Christy's response to my CROMERR question based on our discussion

Kim – the following is Christi's response to my e-mail question regarding the CROMERR signer.

David,

I'm not a CROMERR expert so Judy or Sandra will probably have to expand on my response but I'll take a first cut. It is up to each company authorizing official (CAO) to identify their CROMERR Signers who will be responsible (legally and functionally) for submitting their Requests for Certificates. It is up to each company whether they choose to have the data submitter also be the CROMERR Signer or to have separate CROMERR Signers. The important thing to note is that whomever submits the Request for Certificate is legally responsible for the completeness and accuracy of all of the information used as the basis for a certificate request.

Also, we should get the finalized web-ready presentation from last week's manufacturer webinar that covers all the CROMERR requirements in the next day or two and I will send it to all the LD cert reps for reference.

Dear Mr. Kaul,

As a chief reporter with Europes biggest weekly BILD am Sonntag, I have a question in addition to your Notice of Violation (sept. 18 2015).
Did EPA communicate with the Volkswagen board in Germany on the topic or did you only communicate with Ex. 7 of VW of America?
Could you also tell me, if the VW Passat models had a SCR Cat?
How many cars did you really test?
And finally, did you test any Mercedes cars meanwhile?

I look forward to hearing from you.

Best regards

Subject: Potential Penalties WRT VW Violations

Dear Mr. Meetu,

I own a 2015 VW Jetta TDI, and I'm very concerned with the recent activity related to VW TDI emissions. More specifically, I worry about the resale value of my car, and follow-on performance/MPG degrades after a proposed ECM reprogram.

Can I offer a suggestion please? I would like to suggest the EPA require VW to pay each VW TDI owner the cost of the TDI option, at a minimum. This cost could be part of the penalties and fines levied against VW as part of this action.

I bought my Jetta, like most people in thinking I was helping the environment with clean emissions, great fuel economy, and decent performance. Looks like all of these factors are compromised now, and hope the EPA thinks about the individual owners during this process.

Thanks for the time,

Sincerely,

Dear Mr. Meetu,

I own a 2015 VW Jetta TDI, and I'm very concerned with the recent activity related to VW TDI emissions. More specifically, I worry about the resale value of my car, and follow-on performance/MPG degrades after a proposed ECM reprogram.

Can I offer a suggestion please? I would like to suggest the EPA require VW to pay each VW TDI owner the cost of the TDI option, at a minimum. This cost could be part of the penalties and fines levied against VW as part of this action.

I bought my Jetta, like most people in thinking I was helping the environment with clean emissions, great fuel economy, and decent performance. Looks like all of these factors are compromised now, and hope the EPA thinks about the individual owners during this process.

Thanks for the time,

Sincerely,

Daniel Holeski

Subject: VW Recall

I drive a 2012 VW TDI that is in my opinion not road worthy and should be illegal to drive due to VW's management's decision to cheat regulators repeatedly. This vehicle could not have been sold to the market otherwise.

The VW practices are anti-competitive (other manufacturers lost market share as they couldn't pass emissions), endanger health, suppress research, and force other US companies to loose jobs. They have used the government resources to cheat others into spending countless dollars into clean technology. Because of their deceptive strategy they were able to improve market share on the backs of the tax payers - as there were incentives to buy these vehicles.

I believe that this behaviour is as bad as it gets. Please keep in mind all of the above and understand that the VW would not be the company it is today had they not cheated.

Would you please do the right thing and do what you can to help prosecute VW to the fullest extent of the law.

VW coverage here too. Have not done much on web, so no blockage noticed. Beijing is huge. So much if it is new. Some great architecture. I will send a picture of a cubist inspired building. Many buildings have features that appear to have little functional value, only an aesthetic purpose. Streets are mostly wide boulevards with park like common spaces or lined with beautiful weeping willows. No noisy two cycle engine scooters. Instead, a constant stream of electric motor bicycles and of course pedal bicycles. The cars tell a story of affluence not limited to a few. Not clear to me percentage wise how common car ownership is, but those with cars are mostly driving late model cars. Jet lag setting in. Hope to be in sync tomorrow.

I'm Varun Sood, writer with Mint, a business daily from India and I'm based out of Bangalore.

I'm writing to you with regards to a piece I'm writing and will appreciate if I can comments from EPA.

I'm told that Bosch India engineers provided and managed the engine management software and system for Volkswagen's diesel engine cars sold in the US. It is this software that has been faulted by the US Environmental Protection Agency, which eventually allowed over 500,000 Volkswagen-made cars to pass emissions tests.

Is the above information correct? Finally, will the US EPA now also ask Bosch to explain its stance on this "defeat" mechanism installed in the engine management system of Volkswagen cars?

I look forward to EPA's comments.

Re: Notice of Violation

Dear Mr. Geanacopoulos and Mr. Johnson:

The United States Environmental Protection Agency (EPA) has investigated and continues to investigate Volkswagen AG, Audi AG, and Volkswagen Group of America (collectively, VW) for compliance with the Clean Air Act (CAA), 42 U.S.C. §§ 7401–7671q, and its implementing regulations. As detailed in this Notice of Violation (NOV), the EPA has determined that VW manufactured and installed defeat devices in certain model year 2009 through 2015 diesel light-duty vehicles equipped with 2.0 liter engines. These defeat devices bypass, defeat, or render inoperative elements of the vehicles' emission control system that exist to comply with CAA emission standards. Therefore, VW violated section 203(a)(3)(B) of the CAA, 42 U.S.C. § 7522(a)(3)(B). Additionally, the EPA has determined that, due to the existence of the defeat

VW FOIA, EPA 06/20/2017 2017-FFP_025823

devices in these vehicles, these vehicles do not conform in all material respects to the vehicle specifications described in the applications for the certificates of conformity that purportedly cover them. Therefore, VW also violated section 203(a)(1) of the CAA, 42 U.S.C. § 7522(a)(1), by selling, offering for sale, introducing into commerce, delivering for introduction into commerce, or importing these vehicles, or for causing any of the foregoing acts.

Law Governing Alleged Violations

This NOV arises under Part A of Title II of the CAA, 42 U.S.C. §§ 7521–7554, and the regulations promulgated thereunder. In creating the CAA, Congress found, in part, that "the increasing use of motor vehicles . . . has resulted in mounting dangers to the public health and welfare." CAA § 101(a)(2), 42 U.S.C. § 7401(a)(2). Congress' purpose in creating the CAA, in part, was "to protect and enhance the quality of the Nation's air resources so as to promote the public health and welfare and the productive capacity of its population," and "to initiate and accelerate a national research and development program to achieve the prevention and control of air pollution." CAA § 101(b)(1)–(2), 42 U.S.C. § 7401(b)(1)–(2). The CAA and the regulations promulgated thereunder aim to protect human health and the environment by reducing emissions of nitrogen oxides (NOx) and other pollutants from mobile sources of air pollution. Nitrogen oxides are a family of highly reactive gases that play a major role in the atmospheric reactions with volatile organic compounds (VOCs) that produce ozone (smog) on hot summer days. Breathing ozone can trigger a variety of health problems including chest pain, coughing, throat irritation, and congestion. Breathing ozone can also worsen bronchitis, emphysema, and asthma. Children are at greatest risk of experiencing negative health impacts from exposure to ozone.

The EPA's allegations here concern light-duty motor vehicles for which 40 C.F.R. Part 86 sets emission standards and test procedures and section 203 of the CAA, 42 U.S.C. § 7522, sets compliance provisions. Light-duty vehicles must satisfy emission standards for certain air pollutants, including NOx. 40 C.F.R. § 86.1811-04. The EPA administers a certification program to ensure that every vehicle introduced into United States commerce satisfies applicable emission standards. Under this program, the EPA issues certificates of conformity (COCs), and thereby approves the introduction of vehicles into United States commerce.

To obtain a COC, a light-duty vehicle manufacturer must submit a COC application to the EPA for each test group of vehicles that it intends to enter into United States commerce. 40 C.F.R. § 86.1843-01. The COC application must include, among other things, a list of all auxiliary emission control devices (AECDs) installed on the vehicles. 40 C.F.R. § 86.1844-01(d)(11). An AECD is "any element of design which senses temperature, vehicle speed, engine RPM, transmission gear, manifold vacuum, or any other parameter for the purpose of activating, modulating, delaying, or deactivating the operation of any part of the emission control system." 40 C.F.R. § 86.1803-01. The COC application must also include "a justification for each AECD, the parameters they sense and control, a detailed justification of each AECD that results in a reduction in effectiveness of the emission control system, and [a] rationale for why it is not a defeat device." 40 C.F.R. § 86.1844-01(d)(11).

A defeat device is an AECD "that reduces the effectiveness of the emission control system under conditions which may reasonably be expected to be encountered in normal vehicle operation and

use, unless: (1) Such conditions are substantially included in the Federal emission test procedure; (2) The need for the AECD is justified in terms of protecting the vehicle against damage or accident; (3) The AECD does not go beyond the requirements of engine starting; or (4) The AECD applies only for emergency vehicles . . . ." 40 C.F.R. § 86.1803-01.

Motor vehicles equipped with defeat devices, such as those at issue here, cannot be certified. EPA, *Advisory Circular Number 24: Prohibition on use of Emission Control Defeat Device* (Dec. 11, 1972); *see also* 40 C.F.R. §§ 86-1809-01, 86-1809-10, 86-1809-12. Electronic control systems which may receive inputs from multiple sensors and control multiple actuators that affect the emission control system's performance are AECDs. EPA, *Advisory Circular Number 24-2: Prohibition of Emission Control Defeat Devices – Optional Objective Criteria* (Dec. 6, 1978). "Such elements of design could be control system logic (i.e., computer software), and/or calibrations, and/or hardware items." *Id.*

"Vehicles are covered by a certificate of conformity only if they are in all material respects as described in the manufacturer's application for certification . . . ." 40 C.F.R. § 86.1848-10(c)(6). Similarly, a COC issued by EPA, including those issued to VW, state expressly, "[t]his certificate covers only those new motor vehicles or vehicle engines which conform, in all material respects, to the design specifications" described in the application for that COC. *See also* 40 C.F.R. §§ 86.1844-01 (listing required content for COC applications), 86.1848-01(b) (authorizing the EPA to issue COCs on any terms that are necessary or appropriate to assure that new motor vehicles satisfy the requirements of the CAA and its regulations).

The CAA makes it a violation "for any person to manufacture or sell, or offer to sell, or install, any part or component intended for use with, or as part of, any motor vehicle or motor vehicle engine, where a principal effect of the part or component is to bypass, defeat, or render inoperative any device or element of design installed on or in a motor vehicle or motor vehicle engine in compliance with regulations under this subchapter, and where the person knows or should know that such part or component is being offered for sale or installed for such use or put to such use." CAA § 203(a)(3)(B), 42 U.S.C. § 7522(a)(3)(B); 40 C.F.R. § 86.1854-12(a)(3)(ii). Additionally, manufacturers are prohibited from selling, offering for sale, introducing into commerce, delivering for introduction into commerce, or importing, any new motor vehicle unless that vehicle is covered by an EPA-issued COC. CAA § 203(a)(1), 42 U.S.C. § 7522(a)(1); 40 C.F.R. § 86.1854-12(a)(1). It is also a violation to cause any of the foregoing acts. CAA § 203(a), 42 U.S.C. § 7522(a); 40 C.F.R. § 86-1854-12(a).

Alleged Violations

Each VW vehicle identified by the table below has AECDs that were not described in the application for the COC that purportedly covers the vehicle. Specifically, VW manufactured and installed software in the electronic control module (ECM) of these vehicles that sensed when the vehicle was being tested for compliance with EPA emission standards. For ease of reference, the EPA is calling this the "switch." The "switch" senses whether the vehicle is being tested or not based on various inputs including the position of the steering wheel, vehicle speed, the duration of the engine's operation, and barometric pressure. These inputs precisely track the parameters of the federal test procedure used for emission testing for EPA certification purposes. During EPA

emission testing, the vehicles' ECM ran software which produced compliant emission results under an ECM calibration that VW referred to as the "dyno calibration" (referring to the equipment used in emissions testing, called a dynamometer). At all other times during normal vehicle operation, the "switch" was activated and the vehicle ECM software ran a separate "road calibration" which reduced the effectiveness of the emission control system (specifically the selective catalytic reduction or the lean NOx trap). As a result, emissions of NOx increased by a factor of 10 to 40 times above the EPA compliant levels, depending on the type of drive cycle (e.g., city, highway).

The California Air Resources Board (CARB) and the EPA were alerted to emissions problems with these vehicles in May 2014 when the West Virginia University's (WVU) Center for Alternative Fuels, Engines & Emissions published results of a study commissioned by the International Council on Clean Transportation that found significantly higher in-use emissions from two light duty diesel vehicles (a 2012 Jetta and a 2013 Passat). Over the course of the year following the publication of the WVU study, VW continued to assert to CARB and the EPA that the increased emissions from these vehicles could be attributed to various technical issues and unexpected in-use conditions. VW issued a voluntary recall in December 2014 to address the issue. CARB, in coordination with the EPA, conducted follow up testing of these vehicles both in the laboratory and during normal road operation to confirm the efficacy of the recall. When the testing showed only a limited benefit to the recall, CARB broadened the testing to pinpoint the exact technical nature of the vehicles' poor performance, and to investigate why the vehicles' onboard diagnostic system was not detecting the increased emissions. None of the potential technical issues suggested by VW explained the higher test results consistently confirmed during CARB's testing. It became clear that CARB and the EPA would not approve certificates of conformity for VW's 2016 model year diesel vehicles until VW could adequately explain the anomalous emissions and ensure the agencies that the 2016 model year vehicles would not have similar issues. Only then did VW admit it had designed and installed a defeat device in these vehicles in the form of a sophisticated software algorithm that detected when a vehicle was undergoing emissions testing.

VW knew or should have known that its "road calibration" and "switch" together bypass, defeat, or render inoperative elements of the vehicle design related to compliance with the CAA emission standards. This is apparent given the design of these defeat devices. As described above, the software was designed to track the parameters of the federal test procedure and cause emission control systems to underperform when the software determined that the vehicle was not undergoing the federal test procedure.

VW's "road calibration" and "switch" are AECDs[1] that were neither described nor justified in the applicable COC applications, and are illegal defeat devices. Therefore each vehicle identified by the table below does not conform in a material respect to the vehicle specifications described in the COC application. As such, VW violated section 203(a)(1) of the CAA, 42 U.S.C. § 7522(a)(1), each time it sold, offered for sale, introduced into commerce, delivered for introduction into commerce, or imported (or caused any of the foregoing with respect to) one of the hundreds of thousands of new motor vehicles within these test groups. Additionally, VW

[1] There may be numerous engine maps associated with VW's "road calibration" that are AECDs, and that may also be defeat devices. For ease of description, the EPA is referring to these maps collectively as the "road calibration."

VW FOIA, EPA 06/20/2017 2017-FFP_025826

violated section 203(a)(3)(B) of the CAA, 42 U.S.C. § 7522(a)(3)(B), each time it manufactured and installed into these vehicles an ECM equipped with the "switch" and "road calibration."

The vehicles are identified by the table below. All vehicles are equipped with 2.0 liter diesel engines.

Model Year	EPA Test Group	Make and Model(s)
2009	9VWXV02.035N	VW Jetta, VW Jetta Sportwagen
2009	9VWXV02.0U5N	VW Jetta, VW Jetta Sportwagen
2010	AVWXV02.0U5N	VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2011	BVWXV02.0U5N	VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2012	CVWXV02.0U5N	VW Beetle, VW Beetle Convertible, VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2012	CVWXV02.0U4S	VW Passat
2013	DVWXV02.0U5N	VW Beetle, VW Beetle Convertible, VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2013	DVWXV02.0U4S	VW Passat
2014	EVWXV02.0U5N	VW Beetle, VW Beetle Convertible, VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2014	EVWXV02.0U4S	VW Passat
2015	FVGAV02.0VAL	VW Beetle, VW Beetle Convertible, VW Golf, VW Golf Sportwagen, VW Jetta, VW Passat, Audi A3

Enforcement

The EPA's investigation into this matter is continuing. The above table represents specific violations that the EPA believes, at this point, are sufficiently supported by evidence to warrant the allegations in this NOV. The EPA may find additional violations as the investigation continues.

The EPA is authorized to refer this matter to the United States Department of Justice for initiation of appropriate enforcement action. Among other things, persons who violate section 203(a)(3)(B) of the CAA, 42 U.S.C. § 7522(a)(3)(B), are subject to a civil penalty of up to $3,750 for each violation that occurred on or after January 13, 2009;[1] CAA § 205(a), 42 U.S.C. § 7524(a); 40 C.F.R. § 19.4. In addition, any manufacturer who, on or after January 13, 2009, sold, offered for sale, introduced into commerce, delivered for introduction into commerce, imported, or caused any of the foregoing acts with respect to any new motor vehicle that was not covered by an EPA-issued COC is subject, among other things, to a civil penalty of up to $37,500 for each violation.[2] CAA § 205(a), 42 U.S.C. § 7524(a); 40 C.F.R. § 19.4. The EPA may seek, and district courts may order, equitable remedies to further address these alleged violations. CAA § 204(a), 42 U.S.C. § 7523(a).

[1] $2,750 for violations occurring prior to January 13, 2009.
[2] $32,500 for violations occurring prior to January 13, 2009.

VW FOIA, EPA 06/20/2017 2017-FFP_025827

The EPA is available to discuss this matter with you. Please contact Meetu Kaul, the EPA attorney assigned to this matter, to discuss this NOV. Ms. Kaul can be reached as follows:

Start Date/Time: Wed 9/23/2015 5:00:00 PM
End Date/Time: Wed 9/23/2015 6:00:00 PM

MEETING REQUEST:

Gwen and Pat,
Lee asked me to work on setting up a meeting for the Division Directors and IO (Ben/Lee/Tracey) to hear about where we are on VW, discuss the magnitude and to provide context for providing additional support to additional communications materials and Q&A.

In addition to the SLT, please invite me and Linc Wehrly and indicate that the division directors may bring others that should be there.

Lee says the Chris should NOT be an invitee since we can't schedule around him this time. Also, Byron is out on travel tomorrow. He is relatively available by phone though.

The title of the meeting is: VW cross-divisional coordination and communications. It should happen tomorrow if at all possible. Thanks, please call me if you have any questions.

Hello Stephan!

I can imagine that this has caused quite the stir in Germany. You can reference the Notice of Violation that we sent to VW: http://www3.epa.gov/otaq/cert/documents/vw-nov-caa-09-18-15.pdf

This should help answer some of your questions. For now you may contact Evan Belser here at EPA. (Belser.evan@epa.gov, 001-202-564-6850)

If you would like to talk this morning, I am available after 3 PM your time.

Best Regards,

Mike

Dear Michael,

how are you? You may imagine that the EPA case against Volkswagen regarding use of defeat devices is causing some turbulences here in Germany.

KBA – the German type approval authority – is currently investigating the case. Of course they are in direct contact with Volkswagen, but currently most of our information is still based on press announcements. Therefore I would like to ask you

whether US EPA can provide us more information.

If you are not involved can you please provide us the right contact persons for an official request?

Best regards

Stephan

Mr Albores:

It is my understanding that there is other car companies clearly violating EPA standards and only VW has been caught. It is quite obvious that For and GMC are doing the same in front of the naked eye. If you pay attention to GMC and Ford Diesel equipped heavy duty trucks the all have a design at the end of the muffler that provide for some fresh air to be pulled and directed to the tip of it where you would normally install the Mono-Nitrogen oxides (NOx) sensor. Common sense tells you that this "fresh" air will impact the emissions test positively, but, are these vehicles really being environmentally friendly?

Subject: RE: Recall of Volkswagen diesel vehicles by EPA

Dear Evan,

As you can imagine we have very intense discussions on the VW case on all levels at our end. One question, which pops up all the time is the motivation of VW for having the defeat device installed at the first place.

Basically some of the faulty vehicles have a SCR system installed and then the motivation is obviously saving urea, allowing for larger travel distances between refill intervals, basically for customer convenience. By the way, does EPA or CARB regulation require a minimum travel distance for which a full tank must provide urea (e.g. for assuming a poor urea supply infrastructure)? If so, VW might have a big problem to render the vehicles compliant even with a recall.

But other vehicles have a LNT installed. In such case the motivation for the defeat device would be a reduced fuel consumption, but this fuel consumption would not show on the regulatory test cycle, on which the defeat device by definition would not be active. VW would therefore not benefit from reduced fuel consumption/CO2 emission values for the US fleet target. It is true that the real driving fuel consumption would be slightly better with the defeat device on board, but is this a strong enough motivation to take such high risk (in particular in the US market with relatively low fuel prices)?

I would be very grateful if you could come back with your thoughts on this.

Klaus

Subject: Recall of Volkswagen diesel vehicles by EPA

Dear Michael,

The recent recall of Volkswagen diesel vehicles by EPA is now all over the European media and it may have some implications for the ongoing development of real driving emission (RDE) legislation, mainly addressing NOx emissions of diesel vehicles, at our end. Therefore I would be very grateful if we could establish a contact on the working level on this topic. I am not sure whether you are the right person; if not maybe you could direct me to the appropriate expert at EPA (and/or CARB).

It would be particularly useful to know whether EPA's action is driven by the fact that VW diesel vehicles emit much more NOx "on the road" (i.e. measured with PEMS?) than on the test cycle - this is actually known since a long time and the reason of being for our RDE work (the degree of the RDE exceedance may of course vary from vehicle to vehicle and manufacturer to manufacturer). In such case I would be interested in the legal basis for requesting the recall, because to my knowledge the US limits (as the EU ones in the current Euro 6 implementing legislation, which we are about to change) are defined on a combination of test cycles only (?).

Or did VW vehicles picked from the road not fulfil the US emission limits on the set of regulatory test cycles (in the lab) if certain minor conditions, like position of the steering wheel etc., were modified? The media talk about "defeat devices" implemented by VW and indentified by EPA (which would also be illegal in the EU, but unfortunately we have no really robust definition right now...) - but the meaning of this term in the given context is not clear from the media reports (which is not surprising...).

I would be very grateful if you came back to me in this matter as soon as possible.

Regards,

BREAKING NEWS

Volkswagen chief Martin Winterkorn resigns amid emissions scandal

Wednesday, September 23, 2015 11:17 AM EDT

Martin Winterkorn resigned as chief executive of Volkswagen on Wednesday, taking responsibility for an emissions cheating scandal that has gravely damaged the carmaker's reputation and may spread to the German economy.

"As C.E.O. I accept responsibility for the irregularities that have been found in diesel engines," Mr. Winterkorn, who had headed the company since 2007, said in a statement. But he continued to insist he personally committed no misconduct. "I am not aware of any wrong doing on my part."

In Germany there was growing concern Wednesday that the scandal could damage the country's economy, which revolves around the auto industry. Volkswagen employs 274,000 people in Germany at 29 factories, and is already struggling with high labor costs. That figure does not count tens of thousands of people employed by Volkswagen suppliers.

Subject: RE: Recall of Volkswagen diesel vehicles by EPA

Hello Klaus, and thank you for you note. Unfortunately I am not at liberty to discuss case facts that are not already public. Answering would also require speculation on my part which would not be appropriate. As I'm sure you can appreciate, this is a matter of federal law enforcement and we have on ongoing investigation. The answer to "why" VW did this will be part of our investigation.

Best Regards,

Evan

Subject: RE: Recall of Volkswagen diesel vehicles by EPA

Dear Evan,

As you can imagine we have very intense discussions on the VW case on all levels at our end. One question, which pops up all the time is the motivation of VW for having the defeat device installed at the first place.

Basically some of the faulty vehicles have a SCR system installed and then the motivation is obviously saving urea, allowing for larger travel distances between refill intervals, basically for customer convenience. By the way, does EPA or CARB regulation require a minimum travel distance for which a full tank must provide urea (e.g. for assuming a poor urea supply infrastructure)? If so, VW might have a big problem to render the vehicles compliant even with a recall.

But other vehicles have a LNT installed. In such case the motivation for the defeat device would be a reduced fuel consumption, but this fuel consumption would not show on the regulatory test cycle, on which the defeat device by definition would not be active. VW would therefore not benefit from reduced fuel consumption/CO2 emission values for the US fleet target. It is true that the real driving fuel consumption would be slightly better with the defeat device on board, but is this a strong enough motivation to take such high risk (in particular in the US market with relatively low fuel prices)?

I would be very grateful if you could come back with your thoughts on this.

Regards,

Klaus

Subject: Recall of Volkswagen diesel vehicles by EPA

Dear Michael,

The recent recall of Volkswagen diesel vehicles by EPA is now all over the European media and it may have some implications for the ongoing development of real driving emission (RDE) legislation, mainly addressing NOx emissions of diesel vehicles, at our end. Therefore I would be very grateful if we could establish a contact on the working level on this topic. I am not sure whether you are the right person; if not maybe you could direct me to the appropriate expert at EPA (and/or CARB).

It would be particularly useful to know whether EPA's action is driven by the fact that VW diesel vehicles emit much more NOx "on the road" (i.e. measured with PEMS?) than on the test cycle - this is actually known since a long time and the reason of being for our RDE work (the degree of the RDE exceedance may of course vary from vehicle to vehicle and manufacturer to manufacturer). In such case I would be interested in the legal basis for requesting the recall, because to my knowledge the US limits (as the EU ones in the current Euro 6 implementing legislation, which we are about to change) are defined on a combination of test cycles only (?).

Or did VW vehicles picked from the road not fulfil the US emission limits on the set of regulatory test cycles (in the lab) if certain minor conditions, like position of the steering wheel etc., were modified? The media talk about "defeat devices" implemented by VW and indentified by EPA (which would also be illegal in the EU, but unfortunately we have no really robust definition right now...) - but the meaning of this term in the given context is not clear from the media reports (which is not surprising...).

I would be very grateful if you came back to me in this matter as soon as possible.

Regards,

Klaus

Volkswagen CEO steps down amid US emissions-rigging scandal

By Geir Moulson and Pan Pylas

BERLIN (AP) — Volkswagen CEO Martin Winterkorn stepped down Wednesday over a scandal in which the German carmaker admitted to rigging its diesel cars' emissions to pass U.S. tests.

In a statement, Winterkorn said he took responsibility for the "irregularities" found in diesel engines but that he was "not aware of any wrongdoing on my part."

Trouble seeing this email? Click here.

No replacement for the post of CEO was announced.

"Volkswagen needs a fresh start ... also in terms of personnel," he said. "I am clearing the way for this fresh start with my resignation."

Winterkorn said VW must continue the process of "clarification and transparency."

Novel Suit Over EPA Air Compliance Order Review Echoes CWA Dispute

A novel lawsuit seeking judicial review of an EPA Clean Air Act compliance order could provide an important test of whether courts can hear challenges to such orders prior to enforcement, echoing a dispute over pre-enforcement review of Clean Water Act (CWA) compliance orders that the Supreme Court eventually said judges can review.

Doubting State Progress, Advocates Urge EPA Inspections Of Iowa CAFOs

Environmentalists in Iowa are asking EPA to conduct independent inspections of manure spills in Iowa, casting doubt on a recent progress report from the state's Department of Natural Resources (DNR) that claims the state has met the targets in a 2013 agreement with EPA requiring inspections of concentrated animal feeding operations (CAFOs).

News Briefs

EPA, Refiners Fight Bid To Amend 'Tier 3' Rule Suit

EPA and refiners are fighting ethanol proponents' push for the U.S. Court of Appeals for the District of Columbia Circuit to amend its ruling that rejected a challenge to the agency's "Tier 3" fuel and vehicle emissions rule that ethanol proponents argue includes a test that makes it impossible to bring higher blends of the fuel to market.

EPA's McCarthy Sees Volkswagen Case As 'Outlier'

EPA is investigating whether other manufacturers of diesel passenger vehicles may have followed Volkswagen's lead in installing unlawful emissions control "defeat devices" that increased emissions of nitrogen oxide (NOx) while reducing greenhouse gases, but Administrator Gina McCarthy says she

expects the German auto giant to be an “outlier.”

Senate Backs Bill To Force EPA Settlement 'Transparency'

Senators by unanimous consent have approved legislation that would set new public disclosure requirements to increase “transparency” when EPA and other agencies agree to new rulemaking deadlines in judicial settlements, a rare bipartisan move to address what critics say are “sue and settle” pacts between EPA and advocates.

ENERGY POLICY:

Senate Dems outline sweeping package promoting clean energy

Geof Koss and Hannah Northey, E&E reporters

Published: Tuesday, September 22, 2015

Senate Democrats today laid out a comprehensive package of clean energy provisions that will serve as their caucus' starting point in negotiations with Republicans on a range of issues in the coming months.

The "American Energy Innovation Act" is intended to send "a clear signal that a top priority for Senate Democrats is to invest in our clean energy future," Minority Leader Harry Reid (D-Nev.) said during a news conference this morning.

The bill, assembled by Senate Energy ranking member Maria Cantwell (D-Wash.) with the help of Democrats on the Finance and Environment and Public Works committees, contains a smorgasbord of provisions to curb carbon emissions and boost clean energy sources.

The measure sets U.S. climate policy as reducing carbon emissions by 2 percent annually through 2025, while simultaneously pressing major foreign emitters to cut their own carbon emissions.

In a nod to current political realities, the bill does not establish a price on carbon but is intended to set complementary policies for achieving the goals. "Our approach is to set concrete targets" that will be met through innovation, Cantwell said.

Pressed on the omission of a carbon price, Cantwell noted that the bill would be different if Democrats were in the majority but said she's focused on making incremental progress on curbing emissions where possible in the meantime.

The 437-page bill contains provisions from across the caucus, with a major emphasis on overhauling the tax code.

It would create a "performance-based incentive that would be neutral and flexible between clean electricity technologies," according to a summary. Finance ranking member Ron Wyden (D-Ore.), a former Energy Committee chairman, has long called for such an incentive, which would allow developers to choose between a production tax credit and an investment tax credit scaled to the amount of carbon dioxide emitted per kilowatt-hour.

"Power plants that emit at least 25 percent less carbon than the current nationwide average begin qualifying for a small incentive, which increases for power plants that are progressively cleaner," states the summary. "Zero emission facilities qualify for the maximum credits -- a 2.3 cents per KWh hour PTC or a 30 percent ITC. The PTC is available for the 10 years after a facility is placed in service."

The bill would also allow power plants operating before Jan. 1, 2018, to claim the full 30 percent of the ITC for adding energy storage or carbon capture technology. Sen. Martin Heinrich (D-N.M.) said the tax treatment for energy storage in the bill could support widespread change on the U.S. electric grid, allowing for a more distributed system that supports consumer choice.

"I think we're going to see what happened with silicon-based photovoltaics in terms of precipitous drops in cost, we're going to see those same incremental but significant changes in both the energy density of storage and the costs of storage," he said. "When that happens, that's a game changer for how you manage the grid as a whole."

Heinrich is part of a larger group of senators on the left who included language in the bill to support the research and deployment of energy storage, increase energy efficiency, remove barriers for distributed generation, and increase federal authority to protect the grid from cyberthreats.

The Senate Democratic measure, for example, includes a proposal Heinrich floated to allow residents tapping into communal solar projects to offset power from traditional power plants and more easily connect to the grid. That language never made it into the bipartisan bill that passed the Senate Energy and Natural Resources Committee.

Another focus is a proposal from Sen. Al Franken (D-Minn.) to create a federal standard for energy efficiency, which authors of the legislation touted as a way to save consumers $150 billion during the next 15 years. That provision would require utilities to achieve 20 percent energy savings by 2030, at which point the Department of Energy would revise the standard.

The bill also includes language Vermont Sen. Bernie Sanders (I) floated to boost support for solar projects in low-income communities. Sanders, who is running for the 2016 Democratic presidential nomination, wants the government to provide $200 million in Energy Department loans and grants to help low-income families pay for rooftop solar projects (*Greenwire*, July 7).

Other sections mirror the interests of New York Sen. Charles Schumer, the incoming Democratic Senate leader after Reid retires, to probe the link between electricity prices and capacity markets in regional electricity markets in the Midwest, Northeast, Texas and California. Schumer has for years complained about the effects of market constructs on the East Coast and threatened to tie regulators' hands (*E&E Daily*, Nov. 13, 2014).

The measure additionally would provide "transition relief" by extending the renewable PTC and ITC through 2017, with the Section 48C advanced energy manufacturing credit reauthorized with a $5 billion allocation.

The bill also would create a similar technology-neutral, 10-year incentive for renewable transportation fuels that is based on the life-cycle carbon emissions of a fuel.

But at least one Democrat -- Sen. Joe Manchin from coal-heavy West Virginia -- is opposed to the legislation, and Heinrich acknowledged the bill faces tough odds in a Republican-controlled Congress.

"While [the bill] is going to have a tough row to hoe with this leadership, the American people are waking up to what kind of energy future they want to see," Heinrich said. "And ideas that are currently tough to get a majority for are going to gain traction."

The legislation also would cancel a host of tax breaks for the largest oil and gas companies, while allowing the incentives to continue "based on the size and level of integration of oil and gas companies."

That's a political nonstarter in a GOP Congress but provides Democrats with ammunition to bludgeon Republicans in an election year. "This is going to be a huge issue in the election," said Schumer, noting concern among younger voters about climate change.

The bill contains other provisions that Republicans will strongly oppose, including the repeal of offshore drilling royalty relief, "use it or lose it" provisions for offshore lease holders, and the cancellation of state offshore royalty sharing authorized under a 2006 law.

The Democrats' bill, in the works for months, comes as Republicans have set their sights on repealing the long-standing federal ban on crude oil exports. It also follows the Senate Energy Committee's July passage of a bipartisan energy package negotiated by Cantwell and Energy Chairwoman Lisa Murkowski (R-Alaska).

Key lawmakers from both parties, including Reid, have said they're willing to discuss a deal to allow crude exports if help for cleaner sources is part of the mix (*E&E Daily*, Sept. 18).

Cantwell sidestepped a question about such a deal but signaled that Democrats will be looking for opportunities to advance their energy preferences in the days ahead.

"We passed a bipartisan bill out of the committee, and we always expected when that bill came to the Senate floor there would be a whole lot of other ideas on both sides of the aisle that would be considered," she said. "So these are our ideas. We'd love to get them implemented, and if we don't get them implemented now, we'll look to the future. But clearly that will be part of the discussion."

POLITICS:

Pope likely to cause bipartisan squirming on Hill

Jean Chemnick, E&E reporter

Published: Tuesday, September 22, 2015

Pope Francis famously said, "A good Catholic meddles in politics."

During his visit to the United States this week, he's going to practice what he preaches.

The pontiff is scheduled to arrive at Andrews Air Force Base near Washington, D.C., this afternoon to start five days of discussing issues in ways that will likely make both Republicans and Democrats squirm.

"My sense is that everyone is excited that he's coming, but everyone will have moments of affirmation and discomfort," said John Carr, director of the Initiative on Catholic Social Thought and Public Life at Georgetown University.

While Democrats greet Francis as an ally on social justice, immigration and climate change -- issues the pontiff has identified himself with personally -- Republicans are moving to align themselves with long-established church stances on abortion and homosexuality.

President Obama and Vice President Joe Biden are expected to greet the 78-year-old pope, who's flying from a visit to Cuba. Francis' role in U.S. moves to normalize relations with Cuba will be on the agenda

during a White House visit tomorrow that should also touch on global warming and refugee issues and immigration, among other issues.

Before the pontiff wraps up his U.S. stay with a celebration of traditional families in Philadelphia, he plans to celebrate a Spanish-language Mass, visit a food bank and prison, and urge world leaders at a United Nations' summit to act boldly at December's climate negotiations in Paris.

It is not clear how heavily Francis will tout his encyclical on climate change and environmental justice, which he released in June with much fanfare from environmentalists and congressional Democrats (*Greenwire*, June 18).

The 183-page papal letter not only affirms the human cause of climate change but condemns unregulated capitalism as "the dung of the devil" and demands that wealthy countries take ambitious steps to mitigate the risk of warming, especially to protect the world's poor.

Environmentalists hope the pope will use Thursday's first-ever address by the head of the Roman Catholic Church to a joint session of Congress to drive home the need for urgent action on warming. But doing so would likely offend Republicans as much as it delights Democrats.

Most GOP lawmakers still dispute that human emissions are contributing to warming, and even those who acknowledge man-made climate change stop short of calling for drastic action. A group of 11 Republicans made headlines last week by appearing to endorse the science behind man-made warming, but their resolution specified that any policies to address the problem should be "economically viable." They called for "private and public solutions" that do not require economic sacrifice.

Francis' encyclical, by contrast, is laced with passionate calls for self-sacrifice. He even pans solutions to warming like cap and trade because he says they perpetuate a culture of commoditization of resources.

"The idea of infinite or unlimited growth, which proves so attractive to economists, financiers and experts in technology ... is based on the lie that there is an infinite supply of the earth's goods, and this leads to the planet being squeezed dry at every limit," he writes.

Political scramble

At least one Republican Catholic has said he will not attend the pope's address because of what Francis may say. Rep. Paul Gosar (R-Ariz.) in a post on the conservative Townhall.com website last week derided the pope for using his position as head of the church to "guilt people into leftist policies" (*Greenwire*, Sept. 18).

"But when the Pope chooses to act and talk like a leftist politician, then he can expect to be treated like one," Gosar wrote. Gosar says he expects some other Republicans to boycott but has not said which ones.

The Arizona Republican proposed that Francis confine his remarks to "standard Christian theology" and to defending Christians around the world, including those under threat from Islamic extremists in the Middle East.

And Republican leaders moved to align themselves with the pope on social issues by scheduling votes on a bill that would ban abortion after 20 weeks of pregnancy. The Senate this morning voted 54-42 to proceed with the bill, falling short of the 60 votes needed for its advance.

Francis is expected to address abortion during his visit to the World Meeting of Families in Philadelphia on Sunday, and his encyclical censures the procedure as part of the "throw-away culture" that also leads

to environmental degradation and the waste of resources.

But most of the issues the pope will raise during his remarks to Congress and other appearances skew left. Immigration reform is likely to be a topic when Francis addresses Congress, and again when the former Argentinian bishop says Mass in Spanish tomorrow afternoon at the Basilica of the National Shrine of the Immaculate Conception to canonize Junípero Serra, a controversial early missionary to California.

Iraq and Syria will be topics throughout his visit to D.C., but he is also expected to talk prison reform, racism and income inequality. Those messages will be underlined by visits to Philadelphia's largest correctional facility and a New York food bank later in the week. And Francis' anti-capitalist views make it unlikely he'll propose the kinds of free-enterprise solutions to those problems preferred by Republicans.

The constituency that seems to be celebrating Francis' visit the most, however, are environmentalists.

The League of Conservation Voters ran ads ahead of his visit touting the pope's climate encyclical. And Thursday morning, as many as 250,000 people are expected to go to the National Mall to watch a telecast of the pope's address and to be entertained by Moby and other performers who are planning a green theme.

That event by faith group Moral Action on Climate could draw a quarter of the people who visit the nation's capital over the next three days, an organizer said. It competes for a few minutes of the pope's post-address time with another event on the Capitol's West Lawn that will be hosted by House Speaker John Boehner (R-Ohio) for the ticketed guests of members of Congress. Organizers of the climate rally hope Francis will say a few words from the Capitol steps about the need for aggressive action to address warming -- a message they also expect him to take to the United Nations on Friday.

The pope's visit also provided the backdrop for the University of Notre Dame's pledge yesterday stop supporting coal-fired generation.

Gosar aside, most members of Congress say they are happy to welcome Francis to the Capitol. But while Democrats say they're excited to hear the pope's environmental and social justice message, Republicans emphasize that the pope's authority is moral and not political.

Sen. Mike Rounds (R-S.D.), a Catholic, told CNN this week: "We'll thank him for what he brings to the table, and, at the same time, we'll glean from him what we think will be helpful."

Boehner, who has campaigned for two decades to bring a pope to the Capitol, would not comment on what this one might say. His office said Boehner's Catholic faith was a factor in his choice to run for Congress and still informs his decisions as speaker.

Sen. Sheldon Whitehouse (D-R.I.), meanwhile, devoted his weekly climate address last night to the pope's encyclical, and House Minority Leader Nancy Pelosi (D-Calif.) called the visit "thrilling." Pelosi has often been criticized for holding pro-abortion-rights positions that are at odds with the abortion teachings of her Catholic faith.

But is climate change a fundamental church teaching?

Rick Hinshaw, director of communications for the conservative Catholic League, said his group was more concerned that media coverage would misconstrue the pope's teachings than whether the pontiff would say anything that would anger conservative Catholics.

"In a political society, those are always subject to exploitation or co-opting by people with a political agenda," he said. "It's just something that we'll be watching for."

The pope's "charitable" statements toward people who have "same-sex" attraction have been taken out of context, Hinshaw said, and do not reflect a relaxing of church teachings.

And he said that while stewardship of the Earth is a fundamental and long-established tenet of the Catholic Church, that does not mean a Catholic is obligated to agree with the pope when it comes to climate change.

"It is possible to agree with that and to disagree perhaps with the pope's specific prescriptions for how we address that," he said.

Sister Simone Campbell, executive director of Network, a Catholic social action lobby group, said she didn't expect the pope to mention specific policies in his remarks. But she said she expected him to raise climate change as a moral issue that Congress should respond to.

She called it "ironic" that conservative Catholics would try to pre-empt the message by casting it as political.

"I have been highly criticized by the political right for not being faithful to the teachings of the Holy Father when Pope Benedict and Pope John Paul II had a greater focus on the issue of abortion and of gay marriage," said Campbell, who started her "Nuns on the Bus" campaign in 2012 against the federal budget proposal put forward by Rep. Paul Ryan (R-Wis.).

"When the message is inconvenient to them, they forget what they have been saying," she continued. "And the fact is that it's a complex message, because if we respect the dignity of all of creation, then the pope's message about economic justice, environmental justice and that personal justice -- it's all one continuous stream."

FEDERAL AGENCIES:

Lawmakers call for more transparency on conference spending

Kevin Bogardus, E&E reporter

Published: Tuesday, September 22, 2015

A House Republican and Democrat have introduced legislation that would require federal agencies to disclose more about their conference spending.

Last week, Reps. Ron Kind (D-Wis.) and Erik Paulsen (R-Minn.) offered H.R. 3548, the "Transparency Requirements for Agency Conferences and Events Act," or TRACE Act.

The legislation would have agencies disclose detailed information about upcoming conferences they're hosting or sending employees to.

Specifically, the bill would require agencies 30 days before a conference begins to submit an itemized statement of costs associated with the conference, the keynote speakers' names, a list of attendees, the location and itinerary, and a summary of the conference's purposes and goals.

The lawmakers argue the new requirements are needed to ensure that taxpayer dollars aren't misspent on lavish events.

"This bill will ensure federal workers get the training and information needed to do their jobs effectively, while putting oversight in place to guarantee that federal agencies aren't wasting time or taxpayer money," Kind said in a statement.

"We have seen federal agencies that have acted in a way that waste taxpayer money by holding excessive conferences with extravagant gifts, luxuries and perks," Paulsen said on the House floor Friday. "We all remember the lavish Las Vegas GSA conference that cost $823,000 for 300 employees, including tens of thousands of dollars spent on gifts. The IRS spent a whopping $50 million dollars -- taxpayer dollars -- on conferences alone during a three-year period."

That Las Vegas conference held in 2010 became a major scandal for the General Services Administration. Earlier this year, an agency official involved in the planning of the event was sentenced to three months in prison for fraud (*Greenwire*, July 2).

The conference also led to a governmentwide crackdown on conference spending, which some federal employees has said has hindered them in doing their jobs (*Greenwire*, Feb. 9).

FEDERAL AGENCIES:

Senate clears bill to boost settlement transparency

Robin Bravender, E&E reporter

Published: Tuesday, September 22, 2015

The Senate yesterday approved a bipartisan bill aimed at making federal agencies' legal settlements more transparent.

The "Truth in Settlements Act" from Sens. Elizabeth Warren (D-Mass.) and James Lankford (R-Okla.) passed by unanimous consent. Their bill, S. 1109, aims to provide the public with more information about major settlements between government agencies and corporations.

"Too often, the American people learn only what the agencies want them to learn about these agreements," Warren said on the Senate floor in April when the bill was introduced. "That is not good enough. These hidden details can make a huge difference. Below the surface, settlements that seem tough and fair don't always look so impressive."

Her legislation, she added, "will help the public hold federal agencies accountable for settlements they make with corporate wrongdoers."

The bill would force federal agencies to post basic information about major settlements and provide copies of those agreements on their websites. The measure would also require agencies to publicly explain why withheld information is deemed confidential.

The Senate also approved an amendment to the measure from Sen. David Vitter (R-La.) that he says would limit "sue-and-settle" tactics.

Republican lawmakers have accused the Obama administration of strategically entering into settlements with environmentalists to issue regulations under court-ordered timelines and cut industry out of the process.

Vitter's amendment would require agencies to disclose the terms of any settlement in which the

government agrees to pay more than $200,000 in attorney's fees to a private party. It would also require public disclosure of the details of any settlement requiring the government to take regulatory actions and would force agencies to issue annual reports with details including the total number of settlements requiring regulatory changes.

"Sue and settle is one of the most despicable ways that far-left environmental groups and the Obama Administration have cheated the American public out of the rulemaking system, leaning on private property rights and costing families and businesses a lot of money," Vitter said in a statement. "My amendment promotes transparency within the federal government so that expensive regulations are not the result of backroom deals with the president and his supporters."

Companion legislation was introduced in the House by Rep. Matt Cartwright (D-Pa.) in June. That bipartisan bill, H.R. 2648, was referred to the Oversight and Government Reform and Financial Services committees, but neither panel has acted on it.

INFRASTRUCTURE:

White House expands initiative to streamline permitting

Sean Reilly, E&E reporter

Published: Tuesday, September 22, 2015

The Obama administration is expanding use of an online "dashboard" intended to prod agencies to streamline the permitting of big-ticket infrastructure endeavors, including those in transportation, renewable energy and stormwater management, White House officials said today.

Beginning next month, the 11 federal agencies that play a major role in the review and funding process will have to identify projects to be added to the dashboard, according to a memo released this morning by Office of Management and Budget Director Shaun Donovan and Christina Goldfuss, managing director of the Council on Environmental Quality.

While those agencies strive to fulfill those responsibilities "in a timely manner that delivers the best outcomes," Donovan and Goldfuss wrote, "opportunities exist to further improve the efficiency and quality of review, which would cut review timelines while also improving environmental and community outcomes."

The dashboard, launched four years ago in part to give the public a clearer window into the permitting process, is currently tracking 25 projects. Under standards spelled out in the memo, other undertakings will have to be added if they are likely to cost more than $200 million, require at least two environmental or permitting reviews, and involve two or more government jurisdictions.

While agency officials will have some discretion, "the bias should be toward adding the project to the dashboard" if there is any uncertainty, Donovan and Goldfuss wrote.

Agencies covered by the memo include the Departments of Agriculture, Defense, Energy, the Interior and Transportation, and U.S. EPA.

For each project added to the dashboard, they will also have to provide a schedule that details when the application was received, when a decision was made and -- where applicable -- when the review was halted without a decision.

As a rule, agencies are also supposed to report any pause in the review process lasting at least 30 days. Another new feature will be an "outcome classification system" giving agency officials the chance to show how their reviews reduced the proposed project's effects on water, air and other resources.

AIR POLLUTION:

Mayors urge Obama to set lower ozone limit

Amanda Reilly, E&E reporter

Published: Tuesday, September 22, 2015

Seventy mayors from 24 states yesterday called on President Obama to set a more stringent ozone standard as U.S. EPA nears a deadline to choose a final new limit.

In a letter led by Grand Rapids, Mich., Mayor George Heartwell and Salt Lake City Mayor Ralph Becker, the officials said a tighter national limit is needed to protect people from adverse health effects tied to ozone pollution.

Ground-level ozone is a key component of smog that's formed when nitrogen oxides and volatile organic compounds react in the presence of sunlight.

Last November, EPA proposed to lower the current limit of 75 parts per billion to between 65 and 70 ppb. But the agency faces intense pressure from industry, GOP critics and several other local officials to retain the existing standard (*Greenwire*, Sept. 1).

EPA is under a court-ordered deadline of Oct. 1 to set a final limit. The White House Office of Management and Budget is reviewing the agency's decision and is in the midst of stakeholder meetings.

In their letter, the 70 mayors argued that a limit at the lower end of EPA's proposed range would be most protective for the public. They cited studies done by public health organizations, including the American Lung Association.

"As mayors, we are on the front lines of protecting the safety and well-being of our constituents and this long-overdue update will reap tremendous benefits for our communities," the letter said.

In contrast to industry contentions that a new standard would be too burdensome, the mayors also said EPA's analysis showed that a new standard would save money in the form of lower health care costs.

"It's simple -- strong smog pollution protections will save lives and prevent asthma attacks so we stand united in calling for action," Heartwell said in a statement.

Obama last week told a business group that while there were "legitimate" cost issues with a new standard, the benefits to public health would outweigh those costs. He also said the administration was constrained by the language in the Clean Air Act, which dictates that EPA set a standard that adequately protects the public (*E&ENews PM*, Sept. 18).

CAMPAIGN 2015:

Conway steps up pro-coal rhetoric in Ky. gubernatorial race

Jennifer Yachnin, E&E reporter

Published: Tuesday, September 22, 2015

Kentucky Attorney General Jack Conway trumpets his support for the state's coal industry in a new television spot as he competes in a three-way race to succeed term-limited Gov. Steve Beshear (D).

Conway's 30-second spot comes on the heels of an attack ad from GOP gubernatorial nominee Matt Bevin that hit the Democrat over his past support for a federal carbon cap-and-trade program (*E&ENews PM*, Sept. 21).

The new ad features footage of Conway mingling with coal miners and touts lawsuits the Democrat has filed against U.S. EPA over the Clean Power Plan.

"Jack Conway: He stood up against Barack Obama to protect Kentucky jobs. He took on the EPA and said, 'Kentucky comes first,'" a narrator states.

The ad goes on to tout praise for Conway from former Republican National Committee Chairman Mike Duncan, who led the RNC from 2007 to 2009 and now heads the American Coalition for Clean Coal Electricity.

"That's why the former chairman of the Republican Party praised Jack Conway for rising above partisan politics to lead," the narrator states, referring to a statement Duncan made in 2014 about a multistate lawsuit Conway joined against EPA.

The ad goes on to cite a statement Kentucky Coal Association President Bill Bissett made last month in which he praised both Bevin and Conway for supporting the industry.

"The Kentucky Coal Association praised Conway as 'very pro-coal,'" a narrator states before Conway addresses the camera directly.

"Coal puts food on the table for our families. I'll stand up to anybody to keep people working here," Conway concluded.

Conway and Bevin are locked in a three-way race with independent Drew Curtis for the right to succeed Beshear.

COAL:

Murray sues Bloomberg over financial reporting

Manuel Quiñones, E&E reporter

Published: Tuesday, September 22, 2015

Murray Energy Corp. is suing Bloomberg LP for revealing confidential information about the coal company's finances, according to a complaint filed yesterday in federal court.

At issue is a story about Murray in the online news outlet Bloomberg Business titled, "Murray Energy's Bonds Collapse After Coal Miner Said to Lower Outlook."

The story begins, "Murray Energy Corp., which just completed its first purchase of overseas assets, is struggling to convince creditors it can withstand the coal slump at home in the U.S."

Murray, in its complaint, accused Bloomberg reporters of using leaked information that was meant to stay private and confidential. The coal company said people with access to the information signed a "binding confidentiality agreement."

Murray has not been shy about suing journalists or media organizations when the company believes coverage of its actions or CEO Robert Murray goes beyond journalistic standards (*Greenwire*, May 13, 2014).

But this case is more about the information Bloomberg released than the story's wording. Murray spokesman and attorney Gary Broadbent had warned Bloomberg about the story.

"Murray Energy Corporation objects, in the strongest terms, to the publication of its Confidential Information contained in your e-mails to me today," Broadbent wrote on Aug. 14.

The complaint -- originally filed in the Belmont County, Ohio, Common Pleas Court and transferred to U.S. District Court for the Southern District of Ohio -- says Murray is unaware of the leakers' identity.

"Plaintiffs have been severely damaged both by Bloomberg's conspiracy to breach the Confidentiality Agreement which enabled Bloomberg to acquire the Trade Secret Information and by Bloomberg's subsequent improper publication of the confidential and nonpublic Trade Secret Information," said the complaint.

A Bloomberg LP spokeswoman declined to comment.

Murray has been among the most active opponents of the Obama administration's regulatory agenda in the courts. One lawsuit accuses U.S. EPA of failing to take account of the economic impacts of rulemakings.

In recent days, Murray also sued the United Mine Workers of America, accusing the union of violating a 2011 wage agreement (*Greenwire*, Sept. 21). The union disputes the allegations.

COAL:

Northern Cheyenne votes against key railroad route

Published: Tuesday, September 22, 2015

Citing multiple cultural and environmental concerns, the Northern Cheyenne Tribal Council voted unanimously to oppose a controversial railroad considered key to developing Otter Creek coal in Montana.

BNSF Railway Co., Arch Coal Inc. and candy bar magnate Forrest Mars have proposed the $403 million Tongue River Railroad as a means of opening southeast Montana to large-scale coal surface mining.

The council voted 9-0 against the line. Northern Cheyenne Tribal Council member Conrad Fisher said the vote was solely to oppose the railroad and that the issue of surface mining would be taken up at a later date.

"We're talking about the effects that would burden and stress the local resources that we have and the

cultural and environmental effects that it would have," Fisher said. "Understand that those are all integrated. We need to see them as part of the fabric of our native heritage. I don't want to say there's one more important than the other. They're integrated."

BNSF Railway has pledged that it would protect any cultural site identified in a study conducted by the federal Surface Transportation Board.

Coal mined at the end of the line in Otter Creek Valley would be exported to the Asia-Pacific region (Tom Lutey, *Billings Gazette*, Sept. 21). **-- AW**

PEOPLE:

Former shell exec goes green

Published: Tuesday, September 22, 2015

Former Royal Dutch Shell PLC executive Juan José Aranguren has done an energy 180 of sorts since leaving the company in June after 37 years.

He now advocates for clean energy, saying developing wind farms would be more profitable than the country's work on a mega shale gas deposit on Vaca Muerta.

"The time spent investing in the development of wind energy for Argentina would be significantly shorter than fracking in Vaca Muerta, which requires a high level of investment. There is a real need in diversifying the grid, instead of just talking about it," he said.

Since leaving Shell, Aranguren has been working with Argentina's conservative opposition alliance Cambiemos (Let's Change), which includes the leader of the green party, a former member of Greenpeace.

Aranguren has said he is not affiliated with any one political party. But he has also been a staunch advocate of ridding the country of oil and gas subsidies, which he said take away state money that could be used on education and welfare.

In advocating for green energy the past few months, Aranguren has said it would benefit Argentineans to diversify the country's energy supply and also to mitigate climate change.

"There are two fundamental concerns that the axis of energy politics should have. Firstly, energy security -- not energy sovereignty, but energy which is varied, accessible and available at a reasonable price," he said. "Secondly, environmental impact is our responsibility. We're not just listening to the pope or worrying about whether the world will come to some kind of compromise before the end of the year in Paris," where U.N. climate talks will be held (Marina Aizen, London *Guardian*, Sept. 22). **-- AW**

EPA:

Agency's $334M in IT investments at risk -- IG

Robin Bravender, E&E reporter

Published: Tuesday, September 22, 2015

U.S. EPA is putting taxpayer cash at risk by failing to properly manage $334 million in information technology investments, according to a new watchdog report.

The analysis, released today by EPA's Office of Inspector General, found that EPA needs to improve its process for recording its IT investments and issue a formal policy for analyzing some IT investments that aren't considered major.

The watchdog office found that one significant EPA investment valued at $15 million hadn't been recorded in EPA's registry of IT systems until the IG's office identified it. The report also found that EPA didn't have a policy to support its analysis of non-major IT investments valued between $250,000 and $5 million.

"The EPA management of its $334 million in IT investments is noncompliant with its current policy," the report says. "Thus, the EPA is at risk of not managing taxpayer dollars properly."

The OIG recommended that the agency update its policies to require certain investments to be recorded in EPA's systems inventory. The report also urges the agency to require formal evaluations of all non-major IT investments.

EPA agreed with the report's recommendations and set out a timeline to update its policies, the report says.

AIR POLLUTION:

Volkswagen ups number of cars affected by deception to 11M

Published: Tuesday, September 22, 2015

Volkswagen officials said this morning that 11 million of its diesel cars sold around the world contained defeat devices meant to help them cheat on emissions tests.

The company said it would allocate about $7.3 billion to repair affected vehicles.

The admission increases the number of vehicles known to contain the devices. Last week, Volkswagen said only that 500,000 vehicles sold in the United States contained defeat devices.

The company's shares declined by 20 percent today after falling by similar levels yesterday (Jack Ewing, *New York Times*, Sept. 22).

Some observers said they believe a broader investigation of automakers' use of defeat devices could uncover them at other car companies.

"We need to ask the question, is this happening in other countries and is this happening at other manufacturers?" said John German of the International Council on Clean Transportation, which first detected the devices in Volkswagen vehicles during research into their operation. "Some part of our reaction is not even understanding what has happened exactly."

The Justice Department, the House Energy and Commerce Committee, and South Korea's environmental ministry have all pledged to investigate the matter (Walters/Ruddick/Farrell, London *Guardian*, Sept. 21).

Federal records showed that the U.S. government paid as much as $51 million in green car subsidies for the affected vehicles in model year 2009, the only year the vehicles were eligible.

Buyers of about 39,500 Jetta and Jetta SportWagen vehicles that year were eligible for a $1,300 tax credit.

"The government has been effective to help advance clean technologies, but it is a waste of taxpayer dollars when they aren't actually helping to clean the environment," said Luke Tonachel, director of the clean vehicles and fuels project at the Natural Resources Defense Council (Jerry Hirsch, *Los Angeles Times*, Sept. 21). **-- SP**

ELECTRIC VEHICLES:

Apple revs up car project -- report

Published: Tuesday, September 22, 2015

Apple Inc. has set a 2019 "ship date" and tripled the number of engineers working on its secret "Titan" project, the supposed code name for an effort to build its own car, according to unidentified sources.

Apple, which has never officially confirmed it plans to build a car, declined to comment yesterday on reports that the company could have an electric car designed by that deadline (Daisuke Wakabayashi, *Wall Street Journal*, Sept. 21).

Among the clues that Apple is thinking about the auto industry is its hiring of automotive and battery design engineers, a confirmed meeting at an automotive testing facility east of San Francisco and an Apple attorney sitting down with California Department of Motor Vehicles officials to discuss self-driving cars.

Apple could either be weighing a jump into the race against Google Inc. and Uber to make the first self-driving vehicle, building its own electric vehicle or developing software to install in other manufacturers' vehicles, according to analysts.

"We believe the auto industry represents a significant opportunity for Apple, but we also expect Apple to be deliberate as always in its product development and testing," Piper Jaffray analyst Gene Munster said in a Sept. 1 report (Brandon Bailey, AP/*Detroit News*, Sept. 21). **-- DTB**

AIR POLLUTION:

Regs led to 76% drop in Calif. cancer risk -- study

Published: Tuesday, September 22, 2015

California air regulations have resulted in a 76 percent decline in cancer risk from toxic air pollution over more than two decades, state regulators said.

The California Air Resources Board took credit for the improvement, arguing that California's strict rules limiting air discharges from a variety of sources turned around what was once a trend of worsening emissions.

Scientists calculated the cancer risk decline by measuring airborne levels of seven toxic substances that are most responsible for higher cancer risks, like particulate matter in diesel exhaust, benzene, perchloroethylene and others.

The findings, which were published in the journal *Environmental Science & Technology*, were "real-world proof that the regulations are having the kind of impact that we had hoped for," said Álvaro Alvarado, a toxicologist at the Air Resources Board and one of the study's authors.

Alvarado said he expects the reductions to continue as California continues to implement new regulations (Tony Barboza, *Los Angeles Times*, Sept. 21). **-- SP**

CHINA:

President's visit will hinge on clean tech

Published: Tuesday, September 22, 2015

Environmentally friendly technologies will likely take center stage as Chinese President Xi Jinping starts his visit to the United States today.

Today, a group of U.S. governors will meet with six Chinese counterparts to discuss issues including improving building energy efficiency, updating electrical grids and making renewable energy more commercially viable. The governors will likely meet with Xi later today privately.

Beijing's Tsinghua University also will sign an agreement with the University of Washington to collaborate on clean technology research, and Bill Gates' TerraPower Inc. will make an agreement with China National Nuclear Corp. to work on next-generation nuclear technology.

"These are the largest economies in the world, and we're the biggest emitters of greenhouse gases, so improving cooperation and collaboration is really a necessity," said Brian Young, Washington state's director of economic development for the clean technology sector. "Second, it's a huge business opportunity. Both sides recognize the opportunity for job creation."

"They see this as a huge business opportunity for the future, especially in solar and wind," said Mikkal Herberg, research director for the energy security program at the National Bureau of Asian Research. "They want to be a global leader in renewable energy technology. They want to be a leader in nuclear energy."

In November, Xi and President Obama announced an agreement to work together on climate change, with China making its first commitment to cap greenhouse emissions by 2030 or sooner (*ClimateWire*, Nov. 12, 2014). The deal represented a high point in relations that have been strained by Chinese hacking attacks on the United States and aggressive moves by China in the South China Sea.

After spending time in Seattle, Xi will travel to Washington, D.C., on Friday for a state dinner with Obama (Johnson/Le, AP/*San Francisco Chronicle*, Sept. 22). **-- BTP**

Subject: Re: EPA charges against VW -- Questions from German Embassy

Michael, here are the answers to the questions that you sent on Monday. I'm also copying Stephan for his information:

What is the judicial/legal process that will now follow (and how is the interplay between EPA and DOJ)?

EPA will be working closely with the U.S. Department of Justice throughout this investigation, and determinations regarding potential penalties and other remedies will be assessed as part of the investigation EPA has opened in conjunction with DOJ. As a matter of agency policy, EPA does not discuss the details of ongoing investigations.

Apart from a federal law suit, is there a possibility that Volkswagen will also face further court action by individual states (or even class action litigation)?

Individual states may have a cause of action pursuant to the Clean Air Act or state law. We note that the California Air Resources Board, which is centrally involved in this matter, has initiated an enforcement investigation of its own. Recent media reports have stated that class action law suits have been filed against VW.

We understand the clean air act is the basis for EPA's action. Could you provide us with an overview of similar actions against car makers over the last years which were based on violations of the clean air act?

We are not aware of any past case that is comparable on the facts and in its scope to the present case. However, EPA has brought a number of cases under the CAA to ensure a level playing field in the automobile manufacturing sector, and most of these cases can be viewed on our website at:

http://www2.epa.gov/enforcement/clean-air-act-vehicle-and-engine-enforcement-case-resolutions.

David:

I have a 2013 VW Passat which has never gotten close to the MPG stated on the Sticker. Among other things, I complained right away to VW who inspected the car and said it due to my low avg speed in Los Angeles. Since then I've moved to AZ where roads are "normal" and my mileage has never improved. Now that I see VW installed software code to circumvent emissions standards, is it possible whomever tests new cars for MPG's did it incorrectly or in violation of standards?

Thank you.

Respectfully,

Notices of Violations

Volkswagen

EPA issued a notice of violation (NOV) of the Clean Air Act (CAA) to Volkswagen AG, Audi AG, and Volkswagen Group of America, Inc. on September 18, 2015. The NOV alleges that four-cylinder Volkswagen and Audi diesel cars from model years 2009-2015 include software that circumvents EPA emissions standards for certain air pollutants. The software produced by Volkswagen is a "defeat device," as defined by the Clean Air Act. California is separately issuing an In-Use Compliance letter to Volkswagen, and EPA and the California Air Resources Board have both initiated investigations based on Volkswagen's alleged actions.

Affected diesel models include:

- Jetta (MY 2009 - 2015)
- Jetta Sportwagen (MY 2009-2014)
- Beetle (MY 2012 - 2015)
- Beetle Convertible (MY 2012-2015)
- Audi A3 (MY 2010 - 2015)
- Golf (MY 2010 - 2015)
- Golf Sportwagen (MY 2015)
- Passat (MY 2012-2015)

EPA Press Release

Notice of Violation (PDF) (6 pp, 2.35MB, September 18, 2015, About PDF)

California In-Use Compliance Letter EXIT Disclaimer

Information for Owners of the Affected Vehicles

- What happened?
- What vehicles are affected?
- What should I expect if I own an affected Volkswagen or Audi diesel vehicle?
- Can I continue to drive my vehicle?
- Will EPA take or confiscate my vehicle?
- Can EPA require Volkswagen to recall these vehicles?
- Is EPA officially requiring Volkswagen to issue a recall now?
- Will I be required to have my vehicle repaired once it is recalled?
- I live in an area that requires periodic emissions tests. What happens if my car fails?
- How much will this cost to fix?

- Can I turn off the defeat device?
- What pollutants are being emitted?
- How much more pollution is being emitted than should be?
- Is this contributing to bad air quality in my city/area?
- Where can I get more information?

What happened?

In September 2015, EPA issued a Notice of Violation of the Clean Air Act to Volkswagen for producing and selling four-cylinder diesel cars that include a sophisticated software device that circumvents EPA emissions standards for certain air pollutants. EPA and the California Air Resources Board (CARB) have collaborated on testing these cars and have determined that vehicles on the road emit up to 40 times more pollution than emission standards allow.

What vehicles are affected?

- Jetta (MY 2009 - 2015)
- Jetta Sportwagen (MY 2009-2014)
- Beetle (MY 2012 - 2015)
- Beetle Convertible (MY 2012-2015)
- Audi A3 (MY 2010 - 2015)
- Golf (MY 2010 - 2015)
- Golf Sportwagen (MY 2015)
- Passat (MY 2012-2015)

top of page

What should I expect if I own an affected Volkswagen diesel vehicle?

As the owner of an affected Volkswagen diesel vehicle, it is likely that you will receive a recall notice in the future. This notice will come from Volkswagen. It will provide you with information about the recall and with instructions about how to get your car repaired at no cost to you.

Can I continue to drive my vehicle?

Yes. These cars are safe and legal to drive. Owners do not need to take any action at this time.

Will EPA take or confiscate my vehicle?

Absolutely not. EPA will not confiscate your vehicle or require you to stop driving. You will not be charged for any repairs made under any recall.

top of page

Can EPA require Volkswagen to recall these vehicles?

Yes. EPA has the authority under section 207 of the Clean Air Act to require a manufacturer to issue a recall when EPA determines that a substantial number of vehicles do not conform to EPA regulations.

Is EPA officially requiring Volkswagen to issue a recall now?

No. EPA expects to compel VW to issue a recall in the future to reduce the emissions impacts of these vehicles. Owners will be notified of that recall once Volkswagen and Audi have developed a remedial plan and EPA has approved the plan. Manufacturers are given a reasonable amount of time to develop a plan to complete the repairs, including both the repair procedure and manufacture of any needed parts. Depending on the complexity of the repair and the lead time needed to obtain the necessary components, it could take up to one year to identify corrective actions, develop a recall plan, and issue recall notices.

Will I be required to have my vehicle repaired once it is recalled?

That depends. Some states require proof that emissions recalls have been performed prior to issuing the vehicle registration. Even in states that do not have this requirement, it is important to have emissions recalls performed because without the repairs, your vehicle may be emitting harmful pollutants in excess of the federal emission standards. You are not responsible for repair costs related to an emissions recall.

I live in an area that requires periodic emissions tests. What happens if my car fails?

It is unlikely that the presence of this device will cause your vehicle to fail. In fact, the defeat device was specifically designed to ensure that vehicles would pass inspection. The defeat device has been installed in the affected VW diesels since 2009. To date, EPA has no indication of any pattern failures with these vehicles during inspection and maintenance emission tests.

top of page

How much will this cost to fix?

Volkswagen will be required to implement corrective action at no cost to the owner.

Can I turn off the defeat device?

No. The device is embedded in the software code that runs the engine control computer.

What pollutants are being emitted?

Vehicles emit an array of pollutants. EPA standards control the allowable emission levels of nitrogen oxides (NOx), hydrocarbons, carbon monoxide, carbon dioxide, particulate matter, and certain toxic chemicals. The VW defeat device affects the way the NOx control system operates, resulting in higher NOx emission levels from these vehicles than from vehicles with properly operating emission controls.

How much more pollution is being emitted than should be?

NOx emission levels are 10 - 40 times higher than emission standards.

Is this contributing to bad air quality in my city/area?

All vehicles emit some pollution that, along with emissions from other sources, affects local air quality. Vehicles with high emission levels have a disproportionate impact. EPA emission standards are designed to protect local air quality and maintain clean and healthy air. The VW diesels with the defeat device do not comply with EPA emission standards.

Where can I get more information?

For more information please send an email to complianceinfo@epa.gov or visit the California Air Resources Board website. EXIT Disclaimer

Subject: VW - quick question from The Times of London

Hello Julia,

I'm a US-based reporter with The Times of London. Good morning. I've a few questions on the VW emissions affair that I hope are simple and quick.

I know you must be inundated right now, but I'm hoping you might be able to

respond right away as I am on a tight London deadline. I'm terribly sorry for the rush.

- Is the EPA questioning other other manufacturers' of diesel vehicles on the use of defeat devices? Are you planning tests to discover whether others are using defeat devices?

- Is the EPA discussing with VW a recall for the affected vehicles?

- Can you give me any guidance on any likely timing for a recall?

- Are there any other developments today you can tell me about?

- Finally, The Wall Street Journal is reporting today that even after VW admitted on September 3 that it was using defeat devices in some cars that it "pleaded for certification of its 2016 models, claiming it had swelling inventories that it needed to get to showrooms." Do you know if this is true. Is there any guidance you can give me on this, either off or on the record?

Thank you very much indeed.

Best regards,

Alexandra

Subject: Meeting request Christian Hey German Advisory Council on the Environment

Dear Anna,

Thanks again for the help re Volkswagen. I am now writing to you on a more positive matter. Christian Hey, general secretary of the German Advisory Council on the Environment (SRU) (http://www.umweltrat.de/EN/TheGermanAdvisoryCouncilOnTheEnvironment/thegermanadvisorycouncilonthee , an expert advisory body of the German Environment Agency (UBA) and the Federal Ministry of the Environment, will be in town next week (Sept 30). The SRU consists of government employees (Christian Hey is employed by the UBA) and appointed university professors who describe and assess environmental conditions, problems, and political trends and point out solutions and preventive measures. The SRU also submits an Environmental Report to the German federal government every four years. The report describes and assesses environmental policy developments and provides in-depth analyses of selected topics. Christian Hey is very interested in some comments your colleague William Jordan, deputy director in the office of pesticide programs, made recently on TTIP (see press article below). Do you think he would be available for a meeting? I am also wondering if Scot Hagerthey or one of his staff that worked on the ROE is interested to talk to Christian Hey about some of the environmental challenges they regard most pressing or they think are not so much on the public radar but warrant attention.
~~~~~~

I've worked with Christian for a few years in one of my previous jobs in Berlin and can say that he is extremely knowledgeable on a wide range of topics.

Many thanks,

Michael

Inside U.S. Trade - 06/27/2014

EPA, Consumer Safety Regulator Express Skepticism About TTIP Benefits

Posted: June 26, 2014

Representatives of two U.S. regulatory agencies on June 24 expressed varying degrees of skepticism toward the idea of expanded regulatory cooperation with the European Union under a U.S.-EU trade deal, and raised fears that an agreement could slow down their rule making.

Robert Adler, acting chair of the U.S. Consumer Product Safety Commission (CPSC), said he worries including regulatory cooperation obligations in the Transatlantic Trade and Investment Partnership (TTIP) could make his agency even more hamstrung than it already is when it comes to issuing regulations.

Adler directly rebuffed the idea -- proposed by the European Commission -- that the trade deal should establish a new "Regulatory Cooperation Council" that would allow greater input from EU regulators and stakeholders in the U.S. regulatory process, and vice-versa.

Imposing such a procedure "could extend an incredibly cumbersome process that we face when we write regulations," Adler said. He explained that in 1981, Congress amended the CPSC's statute to require extensive cost-benefit analyses before publishing a rule. The consequence is that the agency has been able to issue only nine safety standards in the intervening 33 years, he said.

"The idea that we would then have to take a rule that we have spent so much time writing and go to an additional approval means that you're going to have many, many, many years of waiting for safety regulation. And I think that we all know that safety delayed is safety denied in too many respects," he said at an event in Washington hosted by the Transatlantic Consumer Dialogue (TACD).

Adler said some of his office's expert-level officials have been directly involved in the TTIP negotiations, and have helped to explain -- for example -- U.S. rules on flame-retardant treatments for textiles. He said the EU seemed satisfied enough with the explanation so as not to regard these rules as a trade barrier to be tackled through TTIP. But he expressed fear that other CPSC regulations may come into the crosshairs of negotiators.

Separately, William Jordan, deputy director in the office of pesticide programs at the Environmental Protection Agency (EPA), signaled skepticism toward TTIP regulatory cooperation efforts by saying it remains to be seen whether they will be "productive or a big waste of time."

Speaking on a different panel at the same TACD event, Jordan also acknowledged evaluating the potential impact of a rule on trans-Atlantic trade would add to a pile of more than a dozen assessments the EPA must conduct for other areas in publishing a rule, potentially slowing it down further.

"The fact that there may be trade impacts from a regulatory decision doesn't necessarily mean that it changes the regulatory decision, but it might mean that you look for different ways of achieving or implementing a goal," Jordan said.

"The downside that I see is adding yet one more kind of analysis to develop when taking a regulatory action … There are usually about 17 sections that go at the end of every rule making the EPA does. To go to another one adds just a little bit more work and has the potential to slow things down. I think the serious question is: Is it worth it?"

At the same time, Jordan said he sees some possible benefits from cooperating with the EU through its proposed Regulatory Cooperation Council.

He suggested doing so would be somewhat helpful, if only so U.S. officials could go to one forum and have access to all the relevant EU officials on a topic -- something he described as difficult given the EU's complicated bureaucracy. Working together on risk assessment for pesticides, for example, might also reduce the likelihood the U.S and EU would come to different decisions on risk management.

Adler, the acting CPSC chair, also raised questions about whether reducing regulatory differencesbetween the U.S. and EU in the consumer products sector, which includes things like apparel and toys, would really lead to added economic gains for businesses on either side of the Atlantic.

He said his experience has shown companies typically make their products to the highest standard of the markets they sell to, so they are compliant in all of them -- something he contended is good for consumers, and does not incur the expense of maintaining different inventories for different safety standards.

"I think the annoyance factor of different safety systems is huge with our friends in the business community. I personally remain skeptical that the out-of-pocket costs are as great as the annoyance," he said.

Adler added his agency does not have the staff or resources to figure out how standards could be aligned with regulations in other jurisdictions, although it does take international standards and best practices into account. He said he has exhorted businesses who complain about divergent rules to submit detailed petitions demonstrating the two approaches are consistent and harmonizing them would reduce costs. But he said he has received no response to date from businesses.

"What our friends really seem to want is for CPSC to survey the market, find equivalent standards, and lead the charge to make our systems compatible," he said. "In other words, they want us to be the moving party. And I'm going to be very frank: That's not going to happen."

Hello Klaus, and thank you for you note. Unfortunately I am not at liberty to discuss case facts that are not already public. Answering would also require speculation on my part which would not be appropriate. As I'm sure you can appreciate, this is a matter of federal law enforcement and we have on ongoing investigation. The answer to "why" VW did this will be part of our investigation.

Subject: RE: Recall of Volkswagen diesel vehicles by EPA

Dear Evan,

As you can imagine we have very intense discussions on the VW case on all levels at our end. One question, which pops up all the time is the motivation of VW for having the defeat device installed at the first place.

Basically some of the faulty vehicles have a SCR system installed and then the motivation is obviously saving urea, allowing for larger travel distances between refill intervals, basically for customer convenience. By the way, does EPA or CARB regulation require a minimum travel distance for which a full tank must provide urea (e.g. for assuming a poor urea supply infrastructure)? If so, VW might have a big problem to render the vehicles compliant even with a recall.

But other vehicles have a LNT installed. In such case the motivation for the defeat device would be a reduced fuel consumption, but this fuel consumption would not show on the regulatory test cycle, on which the defeat device by definition would not be active. VW would therefore not benefit from reduced fuel consumption/CO2 emission values for the US fleet target. It is true that the real driving fuel consumption would be slightly better with the defeat device on board, but is this a strong enough motivation to take such high risk (in particular in the US market with relatively low fuel prices)?

I would be very grateful if you could come back with your thoughts on this.

Regards,

Klaus

Hello Klaus,

You can reference the Notice of Violation that we sent to VW:
http://www3.epa.gov/otaq/cert/documents/vw-nov-caa-09-18-15.pdf

This should help answer some of your questions. For now you may contact Evan Belser here at EPA. (Belser.evan@epa.gov, 001-202-564-6850)

If you would like to talk this morning, I am available after 3 PM your time.

Best Regards,

Mike

Subject: Recall of Volkswagen diesel vehicles by EPA

Dear Michael,

The recent recall of Volkswagen diesel vehicles by EPA is now all over the European media and it may have some implications for the ongoing development of real driving emission (RDE) legislation, mainly addressing NOx emissions of diesel vehicles, at our end. Therefore I would be very grateful if we could establish a contact on the working level on this topic. I am not sure whether you are the right person; if not maybe you could direct me to the appropriate expert at EPA (and/or CARB).

It would be particularly useful to know whether EPA's action is driven by the fact that VW diesel vehicles emit much more NOx "on the road" (i.e. measured with PEMS?) than on the test cycle - this is actually known since a long time and the reason of being for our RDE work (the degree of the RDE exceedance may of course vary from vehicle to vehicle and manufacturer to manufacturer). In such case I would be interested in the legal basis for requesting the recall, because to my knowledge the US limits (as the EU

ones in the current Euro 6 implementing legislation, which we are about to change) are defined on a combination of test cycles only (?).

Or did VW vehicles picked from the road not fulfil the US emission limits on the set of regulatory test cycles (in the lab) if certain minor conditions, like position of the steering wheel etc., were modified? The media talk about "defeat devices" implemented by VW and indentified by EPA (which would also be illegal in the EU, but unfortunately we have no really robust definition right now...) - but the meaning of this term in the given context is not clear from the media reports (which is not surprising...).

I would be very grateful if you came back to me in this matter as soon as possible.

Regards,

Klaus

Subject: RE: BEV 5-cycle testing

The only one who has officially done 5 cycle CD is Tesla. A major factor is that most Mfrs have found the results are little or no better than the 0.7 adjustment factor. The SAE subcommittee has been working on this for some time. There is a draft and it is close to a vote. I think there is a VW rep who has been present at some of the mtg -which also include Dyno loading and coastdown testing procedures. Look for SAE j1634 draft proposal or ask your SAE rep for it. It outlines procedures for measuring the 5 cycles. It also includes the latest version of the multicycle procedure.

Subject: BEV 5-cycle testing

Jim,

For BEV 5-cycle testing do you have information or a reference for how to measure cycle energy for all 5 test cycles individually? When we do full charge depletion tests we base the cycle energy off of the recharge energy after the end of the test, and then divide it over the number of cycles. For 5 cycle testing where we begin a test with ~50% SOC how are other manufacturers measuring their energy over the cycle?

If you have questions or need clarification we can discuss it further next week when we are over for the e-tron CD tests.

Thanks for your reply, David.

The engine is a 2.5L, 170hp, in-line 5cyl.

Transmission is an automatic. There is a sticker that says: Eng/Trans: 125kW A6F CBU PDW I have no idea what this means.

Sticker Mileage: 22 City 31 Highway 25 combined

Actual Mileage: In AZ: 20-21 combined In CA: combined mileage which actually was principally city was never more than around 15mpg

When I have driven between LA and Phx, virtually all highway I still don't get more than around 25-26mpg.

Although this has nothing to do with MPG's, on the sticker under Performance/Handling it does state, "Partial Zero Emissions Vehicle."

What are your thoughts about this?

Respectfully,

To: Valentine, Julia
Subject: Query from The New York Times

Dear Julia,

I'm a reporter at The New York Times and I'm writing a story with my colleague, David Gelles, on the challenges regulators face in regulating cars that increasingly rely on software and advanced electronics.

I know that the EPA has opposed opening up the codes that auto manufacturers use in their vehicles, because people might try to reprogram their cars to beat emissions rules.

In light of the recent Volkswagen revelations, also from the EPA, I was curious to know whether there was any rethink in the works at the agency on its stance. Some experts have said that more transparency, not less, could hold automakers better accountable, whether it be over emissions or safety defects.

Who would be the best person to speak with at the agency? Please do let me know. We are working on a somewhat tight deadline of noon on Thursday.

Thanks
Hiroko

Thanks. No need to work up additional questions right now – rather just revising what is in there (though the additional questions would be great for later, just not today)

JRW, Evan and DOJ have already looked at this once. So I'm not looking for big changes here. Just make sure things look right Ex. 5, 7

Hello Stephan!

I can imagine that this has caused quite the stir in Germany. You can reference the Notice of Violation that we sent to VW: http://www3.epa.gov/otaq/cert/documents/vw-nov-caa-09-18-15.pdf

This should help answer some of your questions. For now you may contact Evan Belser here at EPA. (Belser.evan@epa.gov, 001-202-564-6850)

If you would like to talk this morning, I am available after 3 PM your time.

Best Regards,

Mike

Dear Michael,

how are you? You may imagine that the EPA case against Volkswagen regarding use of defeat devices is causing some turbulences here in Germany.

KBA – the German type approval authority – is currently investigating the case. Of course they are in direct contact with Volkswagen, but currently most of our information is still based on press announcements. Therefore I would like to ask you whether US EPA can provide us more information.

If you are not involved can you please provide us the right contact persons for an official request?

Best regards

Stephan

VIDEO: Jaguar's Frankfurt stunt tops list

Volkswagen's decision to cheat U.S. emissions regulators could cost the automaker as much as $18 billion in fines, but it's also costing dealers big money. The lawsuit, filed in federal court in Detroit, claims that VW's software designed to defeat devices installed in nearly 500,000 diesel cars sold for running afoul of U.S. emissions rules using a "defeat device." It was a week, the spot's stunt achieved a Guinness World Record.

Dear Kaul,

I can't find Dr. Professor Winterkorn's email- and heck he resigned today anyway...
so he probably does not want to buy my almost brand new VW diesel.
So, I thought i'd send you a note-- your email was much easier to find on the notice to VW.

I hope VW gets fined the absolute maximun possible. I am outraged. What is worse is that I purchased this car based on its very high "green car" ratings and numerous awards bestowed on it by many non-profit organizations. Thanks for being a part of what is likely a large team of people working together to bring this act of disgusting fraud to light!

I hope the fix is quick. I can't wait to be out of this car- which I had been enjoying- having been duped. I will never ever ever buy VW again.

All Best in your work for clean air,

Volkswagen CEO steps down amid US emissions-rigging scandal

By Geir Moulson and Pan Pylas

BERLIN (AP) — Volkswagen CEO Martin Winterkorn stepped down Wednesday over a scandal in which the German carmaker admitted to rigging its diesel cars' emissions to pass U.S. tests.

In a statement, Winterkorn said he took responsibility for the "irregularities" found in diesel engines but that he was "not aware of any wrongdoing on my part."

No replacement for the post of CEO was announced.

"Volkswagen needs a fresh start — also in terms of personnel," he said. "I am clearing the way for this fresh start with my resignation."

Winterkorn said VW must continue the process of "clarification and transparency."

Wolfsburg, 2015-09-23

Statement from the Executive Committee of Volkswagen AG's Supervisory Board

In a meeting on Wednesday, September 23, the Executive Committee of the Supervisory Board of Volkswagen AG discussed in detail the manipulation of emissions data of Volkswagen Group diesel engines and came to the following conclusions:

1. The Executive Committee takes this matter extremely seriously. The Executive Committee recognizes not only the economic damage caused, but also the loss of trust among many customers worldwide.

2. The Executive Committee agrees that these incidents need to be clarified with great conviction and that mistakes are corrected. At the same time, the Executive Committee is adamant that it will take the necessary decisive steps to ensure a credible new beginning.

3. The Executive Committee has great respect for Chairman Professor Dr. Winterkorn's offer to resign his position and to ask that his employment agreement be terminated. The Executive Committee notes that Professor Dr. Winterkorn had no knowledge of the manipulation of emissions data. The Executive Committee has tremendous respect for his willingness to nevertheless assume responsibility and, in so doing, to send a strong signal both internally and externally. Dr. Winterkorn has made invaluable contributions to Volkswagen. The company's rise to global company is inextricably linked to his name. The Executive Committee thanks Dr. Winterkorn for towering contributions in the past decades and for his willingness to take responsibility in this criticall phase for the company. This attitude is illustrious.

4. Recommendations for new personnel will be presented at the upcoming meeting of the Supervisory Board this Friday.

5. The Executive Committee is expecting further personnel consequences in the next days. The internal Group investigations are continuing at a high tempo. All participants in these proceedings that has resulted in unmeasurable harm for Volkswagen, will be subject to the full consequences.

6. The Executive Committee have decided that the company will voluntarily submit a complaint to the State Prosecutors' office in Brunswick. In the view of the Executive Committee criminal proceedings may be relevant due to the irregularities. The investigations of the State Prosecutor will be supported in all form from the side of Volkswagen.

7. The Executive Committee proposes that the Supervisory Board of Volkswagen AG create a special committee, under whose leadership further clarifying steps will follow, including the preparation of the necessary consequences. In this regard, the Special Committee would make use of external advice. Further details about this will be decided at the Supervisory Board meeting on Friday.

8. The Executive Committee is aware that coming to terms with the crisis of trust will be a long term task that requires a high degree of consistency and thoroughness.

9. The Executive Committee will work on these tasks together with the employees and the Management Board. Volkswagen is a magnificent company that depends on the efforts of hundreds of thousands of people. We consider it our task that this company regains the trust of our customers in every respect.

Subject: Engine controller information for Touareg

Hi Ex. 7

Here is the information that I am requesting for a 2014 VW Touareg diesel. In order of priority:

- Listing of CAN addresses (PIDs) for the powertrain controller (ECU) to access engine /emissions parameters.

- Feature descriptions and engine parameter definitions/descriptions

- Appropriate ETAS A2O file for monitoring aftertreatment such as exhaust and emissions sensor, dosing, models… if available

- Software listing file

Preferably all in English but I don't want to wait if not available. I would really like to get the first two items early next week.

Pope Francis praises Obama's climate action, urges U.S. leadership

By Kevin Rogers

Pope Francis used his first public remarks in the United States to make common cause with the Obama administration on climate change, praising the Climate Action Plan and calling on the U.S. to lead the world at a "critical moment" when mankind must prevent the worst impacts of climate change.

"Mr. President, I find it encouraging that you are proposing an initiative for reducing air

pollution," Francis said before a crowd of more than 11,000 on the White House South Lawn Wednesday.

"Climate change is a problem which can no longer be left to a future generation," he said.

Building on his May encyclical that urged stronger protections for "our common home," Francis warned that action must be immediate.

"We still have time to make the change needed to bring about a sustainable and integral development, for we know that things can change," he said.

A critical element Obama's environmental plan is the set of two EPA power plant carbon rules, finalized in August, which set 2030 as the deadline for cutting power plant carbon emissions to levels 32 percent lower than 2005. The entire suite of regulations has come under attack from Republican lawmakers and presidential candidates and the petroleum industry.

Francis used his remarks to tie climate policy to social and economic justice issues, arguing that action is necessary to protect the most vulnerable.

"Such change demands on our part a serious and responsible recognition not only of the kind of world we may be leaving to our children, but also to the millions of people living under a system which has overlooked them," he said. "To use a telling phrase of the Reverend Martin Luther King, we can say that we have defaulted on a promissory note, and now is the time to honor it."

The White House said that in a private meeting, Obama and Francis discussed the issue in more depth, including the necessity for a strong global deal to curb emissions at United Nations negotiations in December.

Obama alluded to the world effort in his own remarks Wednesday, praising Francis' climate focus as helpful in building momentum for strong climate action.

"Holy Father, you remind us that we have a sacred obligation to protect our planet, God's magnificent gift to us," Obama said. "We support your call to all world leaders to support the communities most vulnerable to changing climate, and to come together to preserve our precious world for future generations."

Leading congressional critics of Obama's climate policies kept quiet Wednesday as they prepared for Francis' Thursday address before a joint meeting of Congress.

Representatives for Senate Majority Leader Mitch McConnell, R-Ky., and Environment and Public Works Chairman Sen. James Inhofe, R-Okla., who have led the charge against the EPA rules, said the lawmakers didn't have any comment on Francis' remarks.

And a spokesman for Rep. Paul Gosar, R-Ariz., who last week declared he would not attend

the address due to the pope's views on climate change, did not return requests for comment. In announcing his boycott, he compared Francis to a "leftist politician" for his climate stances.

But supporters cheered Francis' remarks as a strong endorsement for climate action.

"Pope Francis was right to commend President Obama's Clean Power Plan and his effort to cut harmful carbon emissions," Sen. Ed Markey, D-Mass., said in a statement. "It is a signal to the world that the United States will lead the effort on climate change, a global crisis that is disproportionately impacting the world's poorest and most vulnerable."

However, Chris Horner, a senior legal fellow for the free-market Energy & Environment Legal Institute, which has been critical of the administration's climate policy, said while it's likely that Francis' support would widely touted, it wouldn't do much to win public support for EPA's rules.

"I do not sense this push for policies will have any impact in the public sphere," Horner said in an email. "Which is not to say an awful lot of energy won't be dedicated in an effort pretending it does, or should, have an impact."

He also argued that Francis's support for the regulations would make it easier for critics to highlight economic threats climate action could pose to poor communities. He said "the morality of these policies is turned on its head" when the potential economic effects of higher fuel and electricity costs are considered.

In addition to Wednesday's remarks, Obama used the occasion of Francis's visit to announce new steps linking climate action and faith groups.

The White House said that Catholic Relief Services would join the public-private Climate Services for Resilient Development initiative, designed to provide climate aid services to developing nations. And it said EPA's ENERGY STAR program will work with houses of worship to improve energy and water efficiency.

EPA hears widely different views on methane emission threat

By Dan Elliott

DENVER (AP) — Over-regulating methane emissions could discourage the use of environment-friendly natural gas, an energy industry representative told the Environmental Protection Agency on Wednesday.

However, a former Colorado air quality official countered that such controls would be a cost-effective way to fight climate change.

The EPA heard radically different views as it opened public hearings in Denver on its proposal to slash allowable methane emissions from oil and gas production. Sessions were also scheduled in Dallas on Wednesday and in Pittsburgh on Sept. 29.

The proposed rules are aimed at cutting the emissions by 40 to 45 percent by 2025 compared with 2012 levels.

Volkswagen CEO departs, takes responsibility for scandal

By Geir Moulson and Pan Pylas

BERLIN (AP) — Volkswagen CEO Martin Winterkorn resigned Wednesday, days after admitting that the world's top-selling carmaker had rigged diesel emissions to pass U.S. tests during his tenure.

No replacement was announced, and VW still has no easy exit from a scandal that has suddenly dented a reputation for trustworthiness that took decades to build. The smog-test trickery has wiped out billions in VW's market value and raised the specter of criminal investigations and billions more in fines.

Winterkorn took responsibility for the "irregularities" found by U.S. inspectors in VW's diesel engines, but insisted he had personally done nothing wrong.

"I am doing this in the interests of the company even though I am not aware of any wrongdoing on my part," his statement said. "Volkswagen needs a fresh start ... I am clearing the way for this fresh start with my resignation."

More

Volkswagen's clean-car image dirtied by emissions scandal

By Mae Anderson

NEW YORK (AP) — German engineering may lose some marketing pop after Volkswagen's stunning admission that it rigged emissions tests.

The revelation is particularly damaging since Volkswagen has long pinned its reputation on its technological prowess, with the tagline, "Isn't it time for German engineering?," along with its focus on environmental sustainability.

"Brands are all about trust and it takes years and years to develop," says Nigel Currie, an independent U.K.-based branding consultant. "But in the space of 24 hours, Volkswagen has gone from one people could trust to one people don't know what to think of."

The company apologized and the CEO stepped down, but Volkswagen has yet to explain how the cheating was allowed to occur. The company risks alienating not only fans of the "People's Car," but dealers, the local face of the brand, who feel blindsided by the scandal.

Clinton on energy: Modernize infrastructure, fight climate change

By EnergyGuardian

A day after publicly announcing her opposition to the Keystone XL pipeline, Democratic presidential hopeful Hillary Clinton expanded on her reasons for doing so, and outlined her vision for the country's energy future.

Clinton said in a posting on Medium on Wednesday that she would seek to modernize the country's energy infrastructure and develop new partnerships with Canada and Mexico to fight climate change in North America. She reiterated interest in creating an infrastructure bank to unleash investments in clean energy and said she would strengthen pipeline safety regulations and work to replace the country's oldest pipes and riskiest train cars.

"American energy policy is about more than a single pipeline to transport Canada's dirtiest fuel across our country. It's about building our future," Clinton wrote.

Clinton's Keystone announcement, meanwhile, has won plaudits from some climate activists and criticism from Republicans.

Xi pledges China will shrink barriers to foreign investment

By The Associated Press

SEATTLE (AP) — Chinese President Xi Jinping met with Chinese and American business executives in Seattle on his visit to the U.S., then touted his country's resilient economy.

Echoing statements he made in a speech Tuesday, Xi said Wednesday that China's economy has "big potential" and leaders of the nation will continue to remove barriers to foreign investment.

Xi also spoke about the need for stronger intellectual property protection and other reforms in his country.

China's president got to check out the inside of a new 787 being built for Xiamen Air, China's first privately owned airline, when he toured Boeing's massive assembly plant north of Seattle.

Energy industry problems but no recession in Canada: Finance Minister

By Rob Gillies

TORONTO (AP) — Canada's finance minister says Canada is not in recession now and wasn't in recession in the first half of the year despite data showing otherwise.

Joe Oliver said in an interview with The Associated Press the downturn was largely confined to the energy sector. Canada fell into a recession in the first six months of the year, dragged down by falling energy prices and economic troubles in China.

The Canadian economy retreated at an annual pace of 0.5 percent from April through June after sliding 0.8 percent the first three months of the year. Two consecutive negative quarters are the technical definition of a recession.

"We don't believe that the economy was in fact in a recession," said Oliver, whose Conservative party is seeking re-election on Oct. 19.

Subject: Interview request from TV Channel One, Russia

Dear sirs!

My name is Marina Doronina, I am producer of weekly summarizing news program Sunday Time on TV Channel One, Russia.

For this Sunday (September 27) we are going to make a topic about unfair advertising and unscrupulous producers.

We would like to tell about Volkswagen's recent story with air pollution scandal, Peanut Corporation of America - jury convicted its owner of knowingly shipping out salmonella-contaminated peanut butter and hiding the evidence, General Motors - for hiding a fatal ignition-switch defect tied to at least 174 deaths and similar cases.

We would like to make interview with your EPA representative about Volkswagen case (http://www.scientificamerican.com/article/volkswagen-uses-software-to-fool-epa-pollution-tests/).
So we kindly ask you to help us to make this topic. Any time and place for speaker's convenience at this week.

Would be grateful for your help!

Looking forward to your reply.

Thanks in advance!

The Channel One Russia covers the total audience of around 250 million viewers throughout the world and is the most popular TV broadcaster in Russia.

http://eng.1tvrus.com/programs

With respect and best wishes,
Marina Doronina

Dear Kaul,

I can't find Dr. Professor Winterkorn's email- and heck he resigned today anyway...

so he probably does not want to buy my almost brand new VW diesel.

So, I thought i'd send you a note-- your email was much easier to find on the notice to VW.

I hope VW gets fined the absolute maximun possible. I am outraged. What is worse is that I purchased this car based on its very high "green car" ratings and numerous awards bestowed on it by many non-profit organizations. Thanks for being a part of what is likely a large team of people working together to bring this act of disgusting fraud to light!

I hope the fix is quick. I can't wait to be out of this car- which I had been enjoying- having been duped. I will never ever ever buy VW again.

All Best in your work for clean air,

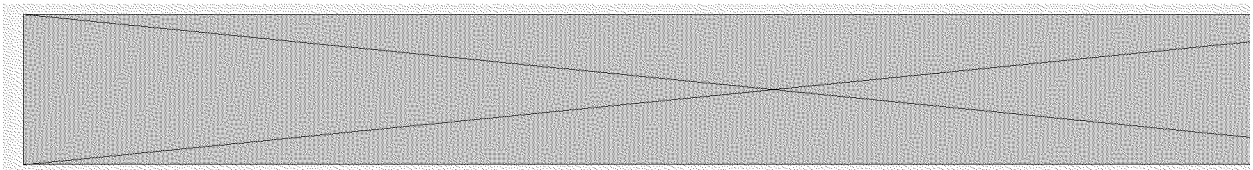
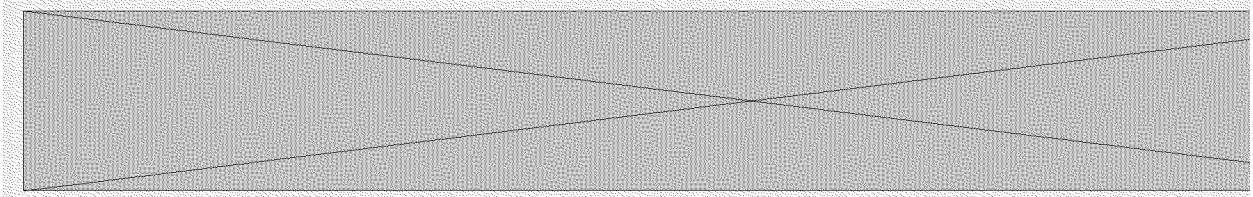
Subject: Overnight Energy & Environment: Pope backs Obama on climate





POPEMANIA ON CLIMATE RULE: Pope Francis backed President Obama's carbon limits for power plants Wednesday, calling the rule "encouraging."

America has the lowest gasoline prices anywhere in the world. That boosts household budgets by billions of dollars. See how exporting crude would lead to higher fuel prices and hurt our economy. http://crudecoalition.org/resources/studies/

SPONSOR-GENERATED CONTENT

Francis wasn't expected to wade too deeply into politics, but his speech at the White House did touch on some sensitive issues in the United States, including the climate rule.

"Mr. President, I find it encouraging that you are proposing an initiative for reducing air pollution," the leader of the Catholic Church said.

"Accepting the urgency, it seems clear to me also that climate change is a problem which can no longer be left to our future generations."

He went on to speak longer about climate change than any other issue in his first major address on American soil, saying "we are living at a critical moment of history" in terms of saving the planet.

At the same event, Obama told Francis the White House supports "your call to all world leaders to support the communities most vulnerable to a changing climate and to come together to preserve our precious world for future generations."

Read more here.

VW CHIEF OUT: Volkswagen Group chief Martin Winterkorn stepped down Wednesday amid international anger over the company's actions to cheat on United States vehicle emissions tests.

Winterkorn said in a statement that he is "shocked" by the events in recent days and took responsibilities for the "irregularities" in testing.

The resignation followed tough grilling on the scandal from Volkswagen's board.

The Environmental Protection Agency (EPA) revealed last week that some Volkswagen diesel cars were programmed to cheat on pollutions tests and emit far less than they would in normal circumstances.

Read more here.

ON TAP THURSDAY I: Pope Francis will speak Thursday morning to a joint session of Congress, the first such speech by a pope in history. He is widely expected to devote attention to climate change and urge international action to fight it.

ON TAP THURSDAY II: The Heritage Foundation will host a discussion on the ongoing state visit of Chinese President Xi Jinping, with Sen. Cory Gardner (R-Colo.) giving keynote remarks. Topics will include China's environmental record.

FOR YOUR CALENDARS: The Hill will host a discussion on Sept. 29 about the EPA's proposed rule to reduce methane emissions from the oil and natural gas sector, as well as other government and private efforts to cut methane pollution. The Hill's Timothy Cama and Bob Cusack will moderate. Featured speakers will include Center for Climate Change and Energy Solutions President Bob Perciasepe and James Bradbury from the Energy Department's energy policy office. The event's free, so check out the details and register to attend here: http://bit.ly/1LxjDs6

AROUND THE WEB:

The EPA heard some very diverse opinions in Denver Wednesday at a public hearing on its methane emissions rule, CBS Denver reports.

The federal government is planning to lease nearly 344,000 acres off New Jersey's coast for wind energy development, the Associated Press reports.

SHARES

Daniel Carder, an unassuming 45-year-old engineer with gray hair and blue jeans, appears an unlikely type to take down one of the world's most powerful companies.

But he and his small research team at West Virginia University may have done exactly that, with a $50,000 study which produced early evidence that Volkswagen AG was cheating on U.S. vehicle emissions tests, setting off a scandal that threatens the German automaker's leadership, reputation and finances.

"The testing we did kind of opened the can of worms," Carder says of his five-member engineering team and the research project that found much higher on-road diesel emission levels for VW vehicles than what U.S. regulators were seeing in tests.

The results of that study, which was paid for by the nonprofit International Council on Clean Transportation (ICCT) in late 2012 and completed in May 2013, were later corroborated by the U.S. Environmental Protection Agency and California Air Resources Board (CARB).

Carder's team—a research professor, two graduate students, a faculty member and himself— performed road tests around Los Angeles and up the West Coast to Seattle that generated results so pronounced that they initially suspected a problem with their own research.

Read MoreThe rapid fall of VW's Winterkorn

"The first thing you do is beat yourself up and say, 'Did we not do something right?' You always blame yourself," he told Reuters in an interview. "(We) saw huge discrepancies.

There was one vehicle with 15 to 35 times the emissions levels and another vehicle with 10 to 20 times the emissions levels."

Despite the discrepancies, a fix shouldn't involve major changes. "It could be something very small," said Carder, who's the interim director of West Virginia University's Center for Alternative Fuels, Engines and Emissions in Morgantown, about 200 miles (320 km) west of Washington in the Appalachian foothills.

"It can simply be a change in the fuel injection strategy. What might be realized is a penalty in fuel economy in order to get these systems more active, to lower the emissions levels.

Carder said he's surprised to see such a hullabaloo now, because his team's findings were made public nearly a year and a half ago.

"We actually presented this data in a public forum and were actually questioned by Volkswagen," said Carder.

The ICCT's research contract to Carder's team was sparked by separate findings by the European Commission's Joint Research Centre, which showed a discrepancy between test results and real world performance in European diesel engines.

The diesel vehicles chosen for the West Virginia study were the VW Passat, the VW Jetta and the BMW X5. Unlike the VW vehicles, Carder said the BMW vehicle "performed very nicely—at, or below, the certification emission levels."

West Virginia University is not new to ground-breaking emissions research, having helped create the first technology to measure vehicle emissions on the road more than 15 years ago.

Carder belonged to a 15-member West Virginia University team that pioneered portable emissions testing as part of a 1998 settlement between the U.S. Justice Department and several heavy duty diesel engine makers including Caterpillar and Cummins Engine Co.

The manufacturers agreed to pay $83.4 million in civil penalties after federal officials found evidence that they were selling heavy duty diesel engines equipped with "defeat devices" that allowed the engines to meet EPA emission standards during testing but disabled the emission control system during normal highway driving.

Read MoreVW had previous run-in over 'defeat devices'

When the news about Volkswagen broke last Friday, Carder heard from some of the heavy diesel engine manufacturers that were part of the consent decree.

"They saw what had happened and called to say: 'Good job, you guys,'" Carder said. "Some folks said: 'How did they not learn from our mistakes 15 years ago?'"

Regarding his role in unearthing the current scandal, Carder said there was no particular sense of excitement when his team confirmed that the higher VW emission results were real and not a consequence of faulty measurements.

"There's no incentive for us to pass or fail," he said. "Obviously, we don't want to see something spewing emissions and polluting the environment. But we really have no horse in the race, as they say."

Why urban air quality hasn't been improving

Improving environmental assessments of urban vehicle emissions…

Air quality in European towns and cities hasn't been improving as expected. The evermore stringent EU vehicle emission standards were perceived to deliver cleaner air, but levels of a key pollutant in our busy streets haven't been falling. As concentrations of the pollutant in question, nitrogen dioxide (NO_2), are often above EC air quality standards (limit values) in European urban areas, nations are exposed to potential infraction fines for non-compliance with EU law. There's also stronger evidence of the health effects of NO_2 emerging, with the World Health Organization classifying diesel engine exhaust as carcinogenic to humans in June 2012.

So why hasn't air quality been improving? Modern diesel vehicle emission controls underperform in urban driving conditions when exhaust gases from the engine are relatively cool, inhibiting the operation of catalysts and filters. Such stop-start traffic motions are commonplace in the streets of our towns and cities, but aren't adequately represented in the legislated vehicle emission standard test conditions.

By surveying the emissions from large numbers of vehicles as they drive through a testing station, research at the Institute for Transport Studies (ITS) has highlighted the deficiencies in diesel vehicle emission controls in urban driving conditions. The remote sensing approach scans the exhaust plume trailing a vehicle as it drives through the measurement station, whilst accounting for fluctuating background levels. Knowing the vehicle's specification (e.g. 2008, diesel car, 2.0 litre, Audi A4) from its number plate allows the emission performance of individual vehicles and fleet averages to be assessed. By amassing a large database of more than a quarter of a million remote sensing measurements with corresponding detailed vehicle information, the oxides of nitrogen emission performance of diesel cars and vans in urban driving conditions have been shown to have changed little in the past 10-20 years. As it is now expected that future EU measures and vehicle emission standards are also likely to under deliver, the task of improving urban air quality is going to be significantly more challenging than was envisaged.

Worryingly from a local air quality perspective, diesel cars are more popular than ever. In 2010, sales of diesel cars overtook those with petrol engines for the first time. European Commission and UK policies are encouraging the purchase of new diesel cars over their petrol-driven counterparts, due to their lower carbon dioxide (CO_2) emission ratings. Whilst this shift in purchasing behaviour is helping motor manufacturers meet their average car CO_2 rating targets (gCO_2/km) in place from 2012 onwards, the trade-off has been a halt in urban air quality improvements. Motor manufacturers face a similar trade-off between CO_2 and emissions of local air quality pollutants, but at a vehicle level as they optimise the operation of the engine and emission controls. Motor manufacturers are complying with the emissions legislation by developing exhaust after-treatment technologies and configuring their operation for the test conditions. The accelerations in the artificial test cycle are, however, slight in comparison with those of 'normal' driving.

Real-world driving with prompter accelerations demands more power from the engine. At higher power demands more emphasis is given to vehicle performance than the emissions of local air quality pollutants. As the complexity and sophistication of engine management and exhaust after-treatment systems have increased, so has the potential for motor manufacturers to optimise their operation for the legislated test conditions to a greater degree, at the disregard of 'normal' on-road operations. There are also concerns about how the performance of the complex, multi-component diesel emission control systems will degrade with time and usage.

Routes to cleaner air

If urban air quality is to improve and standards are to be achieved, it is of the paramount importance that the next generation of Euro 6 diesel vehicles emit considerably less NO_X and NO_2 in urban driving conditions. The Euro 6 legislation will be extended to reflect emissions under 'normal conditions', but the testing methodology is not yet defined. Defra and DfT should ensure that the Euro 6 testing and evaluation methods extensions do deliver reductions in NO_X emissions on the road, in line with the standards.

The development and putting in place of Low Emission Strategies that incentivise and support the innovation of cleaner vehicle technologies will benefit both the global and local environment. Improving the resolution and reliability of vehicles' CO_2 and fuel-efficiency ratings, for example, providing more realistic figures for both urban and motorway driving conditions, would help consumers

VW FOIA, EPA 06/20/2017 2017-FFP_026071

select the cleanest and energy-efficient vehicle for their needs.

As the current testing procedures don't adequately represent real urban driving conditions with its frequent stop-start motions, the benefits of hybrid drive systems that recover and re-use the kinetic energy that would have otherwise been lost under braking are currently under sold. As modern petrol and petrol-hybrid cars emit NO_X at very low levels in urban driving, measures that promote these as city cars, over those with diesel engines, would be beneficial.

The balance of air quality research effort and funding has historically been focused on studying the problem, not its source. Vehicle emission assessments from independent laboratories are sparse. If the recent gulf in understanding between the perceived and actual emission performance of vehicles is not to be repeated, more effort should be directed at investigating vehicle emissions, whether in a laboratory or on the road. The emergence of the remote sensing as a cost-effective tool for independently assessing the on-road emission performance of thousands of vehicles now offers an opportunity to:

- Get an early evaluation of Euro 6 diesel vehicles as they penetrate the operational fleet, greatly enhancing projections of vehicle emissions and air quality levels for future years;
- Study whether vehicles engines and their emission controls degrade with age and usage as expected; and
- Identify high-emitting vehicles.

Vehicle emission research at ITS, University of Leeds

As well as maintaining and operating the only vehicle emission remote sensing facility currently in the UK, ITS has also developed, validated and demonstrated the next generation of coupled traffic – vehicle emission modelling tools that are better able to consider urban stop-start driving conditions, driver behaviour, road gradient, etc.

Dynamic modelling of the whole vehicle fleet of light and heavy-duty vehicles, both old and new, provides improved environmental assessments of traffic networks, management strategies, local sustainable transport initiatives and vehicle technology developments. This well-specified traffic-vehicle emission modelling approach is currently providing the most reliable assessments hitherto of policies such as Low Emission Zones, which are being given serious consideration across Europe as a key policy to combat worsening air.

Greetings from SF,

Reuters has obtained letters from Volkswagen informing customers in April that they should bring in diesel cars to dealers for a software update. VW said the "vehicle's engine management software has been improved to assure your vehicle's tailpipe emissions are optimized and operating efficiently." It says the action was being taken in cooperation with US EPA and CARB. The subject of the letter is "Emissions Service Action 23O6."

What does US EPA know about these letters? How are they related to the company's cheating on NOx tests? Any information appreciated - we are going to press with this very soon.

Best, Rory

DEADLINE: on deadline for evening news

Abby Thom

CBC

abby.thom@cbc.ca

Hello

I work at the National newscast at the Canadian Broadcasting Corporation.

Tonight we plan to lead our broadcast with the Volkswagen emissions test rigging, and the subsequent fallout.

I'm wondering if you can tell me, or estimate, how much additional pollution has been released because of the excess emissions.

IE...if 482,000 vehicles emitted 40x as much nitrogen oxide as the national standard since 2008, what amount of NOx would that amount to, or compare to? As much as a coal power plant emits in a year - or more - for example??

A response this afternoon would be greatly appreciated, since we'll be broadcasting this story tonight.

TOP NEWS

Pharmacia Beats Mass. School's PCB Contamination Suit

Pharmacia Corp. couldn't have known as far back as 1961 that polychlorinated biphenyls present in window caulk installed in a Massachusetts elementary school were potentially toxic, a federal judge ruled Wednesday, tossing a former class action against the one-time PCB manufacturer.

Bill Would Hold EPA Accountable For Gold King Mine Spill

Democratic lawmakers from Colorado and New Mexico on Tuesday introduced legislation that they said will ensure that the U.S. Environmental Protection Agency is held accountable for last month's Gold King Mine spill and that affected communities and tribes are adequately and swiftly compensated.

Volkswagen CEO Steps Down Over Emissions Scandal

Volkswagen CEO Martin Winterkorn on Wednesday announced his resignation as head of the automaker over allegations that the company knowingly engineered its diesel engines to cheat emissions standards.

DC Circ. Correctly Backed Test Fuel Regs, EPA Says

The D.C. Circuit's decision to uphold U.S. Environmental Protection Agency rules on automotive test fuels should stand as is, the agency has said in response to alternative fuel advocates that contend the ruling narrows the EPA's authority to approve the use of new fuels.

Kirkland & Ellis Reps Volkswagen In Pollution Fracas

Volkswagen has turned to Kirkland & Ellis LLP for help in defending itself from federal and state regulators' allegations that it programmed diesel engines in some of its cars to sidestep pollution standards, according to reports citing a firm spokeswoman.

VW Emissions Scandal Will Prompt Stricter EPA Scrutiny

Volkswagen's alleged gaming of federal vehicle emission standards through high-tech "defeat devices" is likely to spur regulating agencies to take a much closer look at how they test and approve pollution controls on cars and trucks as well as other sources of air contamination.

POLICY & REGULATION

Senate Passes Bill To Increase Transparency In Gov't Deals

The U.S. Senate has passed a bipartisan bill that would require federal enforcement agencies to account for tax breaks or other credits included in major settlements when they are publicly announced, a measure that the bill's backers say will enhance public scrutiny of the deals.

Feds Move To Ensure Oil Cos. Can Pay To Scrap Offshore Rigs

Federal offshore drilling regulators on Tuesday floated new guidelines they will use to ensure that energy companies have enough money to decommission offshore rigs and other equipment once they're no longer being used to produce oil and gas.

Landowner Rapport Key To Pa. Pipelines, Task Force Told

Days after a top Pennsylvania regulator and a member of Gov. Tom Wolf's cabinet joined energy industry leaders' call for more pipelines to spur the state's natural gas development, Wolf's pipeline task force heard comments Wednesday on the importance of communicating with landowners.

DOI Taps 13 Bidders For NJ Offshore Wind Auction

The U.S. Department of the Interior said Wednesday that it would auction off about 344,000 acres of federal waters off the New Jersey coast for wind energy development in November and said there are 13 developers eligible to participate in the the auction.

Total Commits $500M To Clean Energy Amid Spending Cuts

French energy giant Total said Wednesday that it will continue its cost-cutting spree by slashing its capital spending by nearly 40 percent from 2013 levels and sell $10 billion in assets by 2017, but the company will set aside $500 million per year for renewable energy development.

ENFORCEMENT

NY AG Probing Volkswagen For Emissions Fraud

New York Attorney General Eric T. Schneiderman announced plans Tuesday to investigate Volkswagen AG after reports that the automaker installed software to circumvent emissions

standards in violation of the Clean Air Act.

2 NJ Counties To Spend $329K Over EPA Oil Tank Violations

Two New Jersey counties will pay more than $329,000 total in either improvement costs or penalties as part of deals with the U.S. Environmental Protection Agency over their allegedly improper handling of underground petroleum storage tank systems, the regulator announced Wednesday.

LITIGATION

LA Metro Gets Win In Challenge To $1.7B Light Rail

A California federal judge on Wednesday upheld the legitimacy of Los Angeles County Metropolitan Transportation Authority's environmental impact review for a $1.7 billion light rail project, rejecting most claims in a non-profit lawsuit claiming the agency failed to adequately consider separating rail from vehicle traffic.

Volkswagen Diesel Cases Should Land In Calif., JPML Told

The plaintiff in one of a slew of putative class actions against Volkswagen over the German automaker's recently uncovered emissions fraud scandal made the first consolidation bid to the U.S. Judicial Panel on Multidistrict Litigation on Wednesday, seeking to unite all of the actions in the Central District of California.

7th Circ. Refuses To Revive Ill. Utility's $70M Enviro Suit

The Seventh Circuit has rebuffed People's Gas Light & Coke Co.'s bid to revive its claims seeking to recoup some of the $70 million it spent remediating a coke plant turned Superfund site, ruling a nearly century-old contract released the plant's former operator from liability.

Cos. Dishonest About Tribal Land Wind Project, Gov't Says

The federal government pushed back against wind farm developers attempting to buck its suit over their alleged infringment of the Osage Nation's mineral excavation rights, telling an Oklahoma federal court Wednesday the companies falsely stated the project is not yet in development.

Monsanto's Roundup Weed Killer Caused Cancer, Suit Says

A former California field worker has slapped Monsanto Co. with a lawsuit in federal court, claiming the primary active ingredient in Roundup weed killer and known carcinogen, glyphosate, caused her to develop bone cancer over years of exposure.

Railroads Join Chorus Against EPA's Waters Of The US Rule

A railroad trade group is pushing for a Texas federal judge to toss the Environmental Protection Agency's controversial new Waters of the United States rule under the Clean Water Act, saying in a suit filed Tuesday that the rule would hinder operations for more than

Baker Hughes Sued For Ruptured Valve At $2.5B Gas Reserve

Oil field services giant Baker Hughes has been slapped with a suit in Texas federal court claiming gas safety valves it sold around the world are defective and prone to rupture, as they allegedly did at a German underground gas storage facility worth $2.5 billion.

BP Deepwater Plaintiffs Ask 5th Circ. To Rethink Denied Cert.

A group of BP investors who purchased stock before the Deepwater Horizon disaster and are suing the company asked the Fifth Circuit on Tuesday to rethink its decision not to certify them as a class, saying it has misread the fraud-on-the-market presumption in securities cases.

Fla. City Backs FHWA In Enviros' Bridge Project Dispute

The city of Port St. Lucie, Florida, put in its support for the Federal Highway Administration's approval of a new local bridge that environmental groups are trying to sideline, arguing Tuesday that the project culminates nearly 20 years of public planning and thorough environmental analysis.

DEALS

PE Firm Puts $100M Into Latin America, Japan Solar Plants

A New Jersey-based private equity firm has teamed up with a Chinese renewable energy provider to fund up to $100 million worth of solar projects in Latin America and Japan.

EXPERT ANALYSIS

Methods To Minimize CERCLA Liability: Part 1

Under Ninth Circuit jurisprudence, applying California law, where there is little or no continuity of personnel or assets, and no continuity of physical location or operations, successor liability under the Comprehensive Environmental Response, Compensation, and Liability Act should fail, say Lester Brown and Thomas McMahon of Perkins Coie LLP.

LEGAL INDUSTRY

Trial Ace: Steptoe's Reid H. Weingarten

He calls himself a "'60s guy" and he cut his teeth as a prosecutor in the post-Watergate landscape, so some may find it ironic that Steptoe & Johnson LLP partner Reid H. Weingarten is now a leading white collar defense attorney who regularly represents captains of industry. But Weingarten isn't buying such easy categorization.

Pillsbury Winthrop Shaw Pittman LLP and Chadbourne & Parke LLP are reportedly in merger negotiations that would create a 1,000-attorney firm, potentially continuing a spree of sizable law firm mergers this year.

How To Keep Your Best Lawyers From Walking

Law firms rely on the talent of their attorneys to attract and retain high-profile clients, and losing one of their top performers could be a big blow to their business. But there are several steps that law firms can proactively take to make sure their brightest stars don't stray, experts say.

'Returnship' Program For Female Attys Heads In-House

A "returnship" fellowship program that helps female attorneys return to high-level legal positions after taking time off from BigLaw is continuing to grow, making its first forays into corporate law departments.

A Soft Target For Hacks, Law Firms Must Step Up Data Security

As holders of some of the most sensitive data in the world, law firms are a natural target of cyberattacks, but client perception is that most firms continue to shrug off the risk. Here, Law360 gets the scoop from the American Bar Association, the Association of Corporate Counsel, a law firm chief security officer and an outside security expert and investigator on where firms are falling short and how they can improve.

Law Firm Accused Of Axing Partner After Cancer Diagnosis

A former partner at Florida personal injury firm Steinger Iscoe & Greene PA says he was fired after being diagnosed with a brain tumor and lung cancer, according to a notice of removal filed in Florida federal court on Wednesday.

DLA Piper Doubles Hamburg Office With Bird & Bird Raid

DLA Piper has doubled the size of its Hamburg, Germany, office with the hire of 20 lawyers from Bird & Bird, including experts in intellectual property and technology, media, competition and life sciences, a DLA Piper representative confirmed on Wednesday.

Subject: Long article about Volkswagen, John German mentioned you and I would really like to speak to you

Good morning!

I spoke to John German at ICCT last night as I'm trying to write the full story about the unveiling of Volkswagen's manipulations. He mentioned you and I would really like to speak to you.

I presume you are not at work right now as there is a seven hour time difference, but I would really appreciate if you could call me when you get in to work in the morning.

Best regards,

Birgitta Forsberg

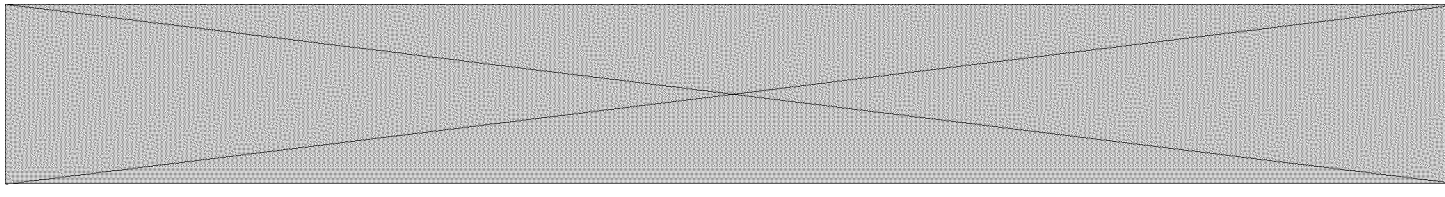
For Sale: Station Developer Trillium CNG

on 23 Sep 2015 by NGTNews

WEC Energy Group, a Milwaukee-based electric and natural gas delivery company, is looking to sell its Trillium CNG subsidiary. Headquartered in Chicago, Trillium CNG is a major provider of compressed natural gas (CNG) station design, construction, and operations and maintenance services. Integrys Transportation Fuels, doing business as Trillium CNG, recently became a part of WEC Energy [read more]



Colorado Agency Prepares New Round of Alt-Fuel Vehicle Grants

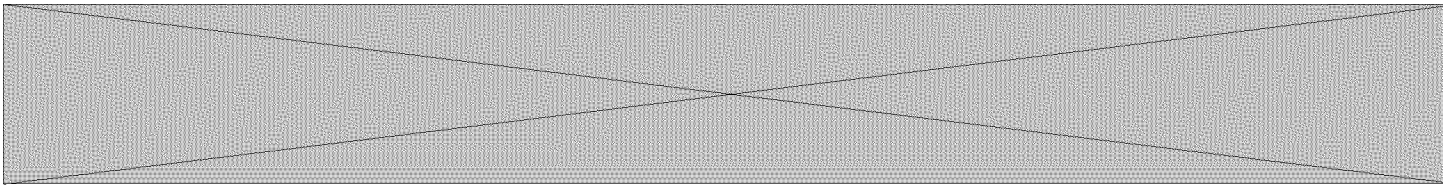
on 23 Sep 2015 by NGTNews

The Regional Air Quality Council (RAQC) has announced it will open the application period for its latest round of funding under the ALT Fuels Colorado grant program on Oct. 1. Through the federally funded state program, the RAQC offers grants to cover up to 80% of the incremental cost of purchasing or leasing new OEM Class [read more]

TruStar Energy Opens Public CNG Station in Louisiana

on 23 Sep 2015 by NGTNews

TruStar Energy has opened a company-owned public compressed natural gas (CNG) station at 515 E. Verot School Rd., Lafayette, La. The company says its new station, which features two traffic lanes and two fast-fill pumps, will help facilitate continued growth of natural gas as a transportation fuel in the Louisiana market. "By building out the CNG [read more]



Volkswagon CEO Resigns Amid Diesel Emissions Scandal

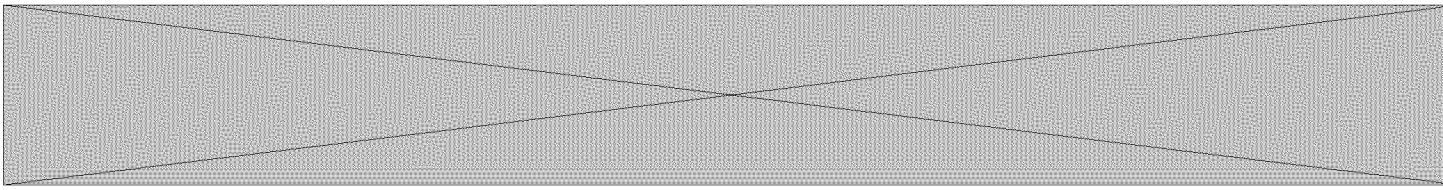
on 23 Sep 2015 by NGTNews

On Wednesday, Martin Winterkorn resigned as CEO of Volkswagen, days after the U.S. Environmental Protection Agency (EPA) accused the vehicle manufacturer of installing software in a variety of its diesel passenger vehicles to cheat emissions testing. Although Winterkorn had issued a statement saying he was "deeply sorry that we have broken the trust of our customers [read more]

DHL Orders UQM-Equipped Electric Delivery Trucks from Zenith

on 23 Sep 2015 by NGTNews

UQM Technologies Inc. has announced that Zenith Motors LLC has received an order for 45 all-electric trucks from major package delivery firm DHL Express USA. The Zenith delivery vehicles are powered by the UQM PowerPhase Pro 135 propulsion systems. "Zenith has been greatly anticipating this order with DHL and is excited to have the opportunity to [read more]



Texas Construction Firm Launches CNG Pilot Program

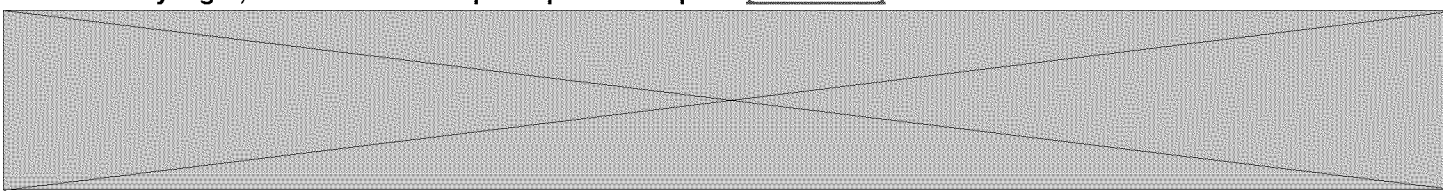
on 22 Sep 2015 by NGTNews

TDIndustries, a Dallas-based mechanical construction and facility service company, has launched a compressed natural gas (CNG) vehicle pilot program to determine the viability of the alternative fuel for its large fleet. According to Jason Cinek, senior vice president of TDIndustries, the company tapped Dallas-based NGV Texas Inc. to convert two 2014 Ford E-350 service vans to [read more]

Advanced Disposal Embraces CNG for Macon, Ga., Operations

on 22 Sep 2015 by NGTNews

Advanced Disposal, a refuse and recycling company that operates in more than a dozen states, recently opened its seventh compressed natural gas (CNG) station, located at its hauling facility at 2201 Trade Dr. in Macon, Ga. Fifteen of the company's trucks currently refuel at the private slow-fill station every night, and Advanced Disposal plans to expand [read more]



Hexagon Debuts Type 4 CNG Tank for Refuse and Transit Market

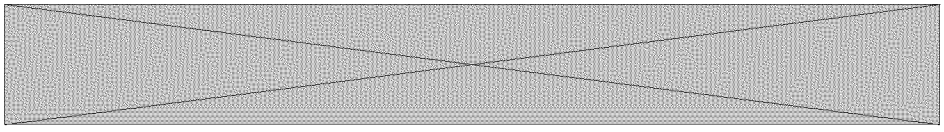
on 22 Sep 2015 by NGTNews

Nebraska-based Hexagon Lincoln Inc., a subsidiary of Hexagon Composites, has introduced its all-carbon, 16-inch-diameter, Type 4 compressed natural gas (CNG) pressure vessel for the transit bus and refuse market. The company debuted the new tank in Denver last week at the North American Natural Gas Vehicle Conference and Expo. According to Hexagon, the new tanks are [read more]

Wind-Powered Hydrogen Refueling Station Opens in U.K.

on 22 Sep 2015 by NGTNews

U.K.-based ITM Power has opened a wind-powered, public-access hydrogen refueling station at the Advanced Manufacturing Park in South Yorkshire. The station, which was supported by funding from Innovate UK, consists of a 225 kW wind turbine coupled directly to an electrolyzer, 220 kg of hydrogen storage, a hydrogen dispensing unit and a 30 kW fuel cell [read more]



Report: North America Represents the Biggest Light-Duty PHEV Market

on 22 Sep 2015 by NGTNews

North America is currently the world's largest market for plug-in electric vehicles (PEVs), with more than 133,000 sold in 2014 and the majority of vehicles concentrated in California, according to a report from Navigant Research. The firm expects sales of such vehicles in North America to total nearly 7.4 million from 2015 to 2024. Overall, the [read more]

ICT Renews Partnership with University on Natural Gas Tanks

on 22 Sep 2015 by NGTNews

Infinite Composites Technologies (ICT), formerly CleanNG, and Oklahoma State University-Tulsa have signed a facility use agreement providing the company with access to the OSU-Tulsa Helmerich Research Center's Next Generation Materials Lab. The agreement will enable ICT to continue development and prototype production of the iCPV, a liner-less, composite fuel storage system. The natural gas fuel tank [read more]

Subject: Visit to DC by UK Dept for Transport

Hi Chris,

My name is Brad Keelor and I work on the Science and Innovation team at the British Embassy. We facilitate research collaboration in all disciplines. I have Phil Blythe, the Chief Scientist at the UK Department for Transport, and Miles Elsden, his deputy, coming to town next week for a conference. They're doing side meetings on Monday, and I'm hoping you're available to meet! They'd like to talk about your office and its role generally, and more specifically, they'd like to talk about VW, I think. They're available in the middle of the day if that works for you. WE'll be wrapping up a meeting at the Embassy at about 12, and they need to be at DOT on NJ Ave at 3, but can meet anytime in between (including for lunch if that works for you). Let me know what you think. Hope to talk to you soon!

Dear Mr. Meetu,

We are Fernando Sanz and Noemi Navas. We are staff writers for the Spanish economic daily Cinco Dias. We have known on the documents posted on the website of the EPA that you has been appointed as the attorney in charge to address the conflict of Volkswagen diesel engines in the United States.

We would really appreciate to hold an interview with you, either by telephone or through a small questionnaire via email. It would be absolutely worthy for our readers in order to clarify how is the EPA investigation on VW will continue from now.

We're looking forward to hearing from you. We thank you on behalf for any kind of help you could give us.

Yours sincerely,

Noemi Navas, editor

Fernando Sanz, editor in chief

Republicans rebuff Obama's wildfire plan, press for action on House bill

By Kevin Rogers

Republican lawmakers on Wednesday rejected an Obama administration appeal to change the federal wildfire funding system, saying it failed to improve effective forest management. Instead, they pressed for Senate action on a House-passed bill that the White House "strongly opposes."

On a call with reporters, House Natural Resources Chairman Rep. Rob Bishop, R-Utah, Rep

Bruce Westerman, R-Ark., and Sen. Steve Daines, R-Mont., said any reform to the wildfire system would require updates to how the Bureau of Land Management and the Forest Service maintain federal forests.

"There's no amount of increased funding that's going to decrease the occurrence of catastrophic wildfires unless we provide the Forest Service with the tools they need to expand treatments to produce healthy, fire-resistant forests," Bishop said, calling the agencies' current management program "pitiful."

The remarks came in response to a letter Interior Secretary Sally Jewell, Agriculture Secretary Tom Vilsack and Office and Management and Budget Director Shaun Donovan sent to Congress last week, seeking reforms to the current system.

The officials called for discretionary spending caps they said would reduce the need for the agencies to divert funds from other programs, a process referred to as "fire borrowing." The officials said the current system of funding, which bases firefighting budgets on a 10-year average, was inadequate to meet the needs of longer, more intense seasons.

"Due to longer fire seasons resulting from climate change, increased fuel loads in our forests and on our rangelands, and the expense associated with protecting lives and homes along an expanding wildland urban interface, the 10-year average keeps rising and will continue to rise," the officials said.

The lawmakers said that approach would amount to a "Band-Aid" throwing more money at wildfires. They pressed for action on the Resilient Federal Forests Act, which the House approved in July by a vote of 262 to 167, with 19 Democrats in support.

The bill would allow the Forest Service and BLM to request funds from the Federal Emergency Management Agency after firefighting funds are depleted and require faster reforesting of burned acreage.

It would also seek to expedite forest management and timber projects through exempting some areas from environmental review, and discourage litigation by requiring plaintiffs to buy a bond to reimburse federal expenses if they lose the case.

The White House, however, in a Statement of Administration Policy voiced opposition to the bill, saying it would "undermine collaborative forest restoration, environmental safeguards, and public participation across the National Forest System and public lands."

The administration also faulted the bill's FFMA provisions, arguing it would inappropriately strain disaster funds, though it stopped short of issuing a veto threat.

The administration prefers the approach offered by Rep. Mike Simpson, R-Idaho, and Sen. Ron Wyden, D-Ore., that would adjust discretionary spending caps and develop a separate wildfire disaster fund.

Daines, regardless of the administration's stance, said that he's leading an effort in the Senate to adopt the measure and working to win enough Democratic support to send it to President Obama's desk.

"I think this fall we do have the best opportunity in recent memory to pass these reforms," he said. "On the Senate side, we're working with Republicans and Democrats alike to force a similar consensus to get something to the president's desk this fall. I think it would be irresponsible and a missed opportunity to only address the wildfire funding issue without also passing reforms to improve the management of the forests in the first place."

The legislation is set to be considered by the Senate Agriculture Committee in the coming weeks, Daines said.

According to the federal government's tally, wildfires have already burned more than 8.5 million acres, and the Forest Service has been required to transfer an additional $700 million this year from non-fire accounts to fund suppression efforts.

EPA says it will build temporary treatment plant for mine

By Dan Elliott

DENVER (AP) — The Environmental Protection Agency said Wednesday it will set up a temporary treatment plant for wastewater flowing from the Gold King Mine in southwestern Colorado after 3 million gallons surged out of the mine in August, tainting rivers in three states.

Colorado's two U.S. senators urged the agency to build a longer-term plant to treat acidic water flowing from multiple mines in the Upper Animas River watershed around Silverton, saying pollution from inactive shafts is a serious problem across the West.

The EPA said it needs the temporary plant for the Gold King Mine because it will be unsafe to operate the settling ponds that are now in use when winter temperatures fall below zero.

The $1.8 million facility is expected to start operating by Oct. 14 and run for up to 42 weeks. The EPA said it will cost $20,000 a week to operate.

Pope to make historic address to Congress, climate change a topic

By Erica Werner and Nicole Winfield

WASHINGTON (AP) — Fresh from enrapturing crowds all over Washington, Pope Francis is bringing his resonant message of humility and hope to Capitol Hill as he becomes the first pontiff in history to speak to a joint meeting of Congress.

Ahead of Francis' remarks lawmakers of both parties have busily sought political advantage from his stances, with Democrats in particular delighting in his support for action to combat global warming and income inequality, and overhaul immigration laws. One House Republican back-bencher announced plans to boycott the speech over Francis' activist position on climate change, which the pontiff renewed alongside President Barack Obama on Wednesday.

Lawmakers of all political backgrounds and religious affiliations have thrilled to the pope's arrival, however, pledging to pause from the bickering and dysfunction that normally divide them and hear him out Thursday morning. Tens of thousands of spectators will be watching from the West Lawn of the Capitol and many more on TV from around the world as the pope addresses a House chamber packed with Supreme Court justices, Cabinet officials, diplomats, lawmakers and their guests.

After the sergeant at arms announces him by bellowing "Mr. Speaker, the pope of the Holy See," Francis will enter the chamber and climb to the dais where the president delivers the annual State of the Union address and monarchs and heads of state have addressed Congress. Behind him will sit Vice President Joe Biden and House Speaker John Boehner of Ohio, the first and second in line to the presidency, both Catholics.

Xi says 'without reform' no progress for business in China

By Gene Johnson and Phuong Le

SEATTLE (AP) — Chinese President Xi Jinping addressed Amazon.com founder Jeff Bezos, billionaire investor Warren Buffett and other top American and Chinese business leaders Wednesday, vowing that his country would work to remove barriers to foreign investment and improve intellectual property protections.

Xi's conference with the business leaders in Seattle was part of a busy day. He also toured the Boeing production facility in Everett, the sprawling suburban Microsoft campus and visited a high school in Tacoma, where he received a football and a personalized jersey.

Protesters and supporters of Xi holding signs in English and Chinese lined the streets outside Microsoft's Redmond campus and also waited outside the high school.

Apple CEO Tim Cook, Microsoft CEO Satya Nadella and Jack Ma of Chinese e-commerce giant Alibaba also were among the 30 executives who attended a closed-door discussion moderated by former U.S. Treasury Secretary Henry Paulson before Xi's address.

$134M for recovery projects arising from 2010 Gulf oil spill

By Cain Burdeau

NEW ORLEANS (AP) — A panel on Wednesday approved using $134 million provided by energy giant BP PLC on 10 projects to help the Gulf of Mexico recover from a catastrophic 2010 oil spill.

The approval came from a trustee council made up of Gulf coast states and federal officials overseeing ecological restoration from the offshore spill. About $126 million will go to projects to help sea turtles, fish, vegetation and birds and $8 million on enhancing recreational uses.

In 2011, BP offered to spend $1 billion to spur the recovery of the Gulf, anticipating future restoration costs meted out through the courts. BP is expected to spend billions of dollars more on restoration.

An April 2010 blowout at a well BP and its contractors were drilling touched off the worst offshore oil spill in U.S. history. The explosion and fire aboard the Deepwater Horizon rig killed 11 workers and crews took nearly three months to cap the leak, which some experts estimated at more than 130 million gallons of oil.

Dealers, owners feel frustrated and betrayed by VW scandal

By Gillian Flaccus and Tom Krisher

LOS ANGELES (AP) — Bob Rand bought his Volkswagen Passat last year for its clean emissions and high gas mileage. He liked the car so much he convinced his son and a friend to buy one, too.

Now, as Volkswagen comes clean about rigging diesel emissions to pass U.S. tests, Rand is desperately trying to sell the fully loaded model with white leather seats for $10,000 below what he paid. His sole bite has been from a man who offered $7,500 on speculation that he could resell it in Mexico.

"Volkswagen was somebody that you could rely on for cutting-edge products and quality and all those things and now you find out that they're not above lying just flat out," said Rand, who plans to join a class-action lawsuit against VW. "That's probably about as bad a thing as a company can do is lie to your face when you're buying a $35,000 car."

Rand's anger at the world's top-selling car company was echoed Wednesday by private dealers, auto wholesalers and owners across the U.S. as fallout from the smog test trickery mounted.

Scientists: Drought stressing California's Giant Sequoias

By Scott Smith

SEQUOIA NATIONAL PARK, Calif. (AP) — Giant Sequoias growing in California's Sierra Nevada are among the largest and oldest living things on earth, but scientists climbing high up into their green canopies say they are seeing symptoms of stress caused by the state's historic drought.

Patches of brown, dead foliage are appearing more than in past years, say researchers studying the iconic trees, which only grow naturally in the Sierra Nevada. By taking stock of groves that are most vulnerable, scientists say they can better manage the forest through the hotter, drier droughts expected in the future.

"They're beautiful, majestic trees," said Koren Nydick, a National Park Service ecologist and part of the research team focused on the treasured trees. "People come from all over the world to see the Giant Sequoias."

Some living more than 3,000 years, Giant Sequoias grow to nearly 300 feet tall. There are other trees that live longer and some that grow taller, but researchers say the Giant Sequoias are unique for their size and longevity.

Weak growth outlook pushes oil-rich Norway to cut rates

By The Associated Press

HELSINKI (AP) — Concerned by weaker economic growth, the central bank of oil-rich Norway has cut its key interest rate to its lowest level ever, 0.75 percent, and hinted that it could reduce it further.

Norges Bank said Thursday that growth was likely to remain low "for a longer period than projected earlier" because of weak oil prices and that oil investments were expected to fall further.

It also said that lower demand for goods and services from the energy sector would hit other parts of the economy and increase unemployment.

On the bright side, the bank mentioned a weaker currency would encourage exports and help domestic companies compete with importers.

By Eric Wolff | 09/24/2015 05:48AM EDT

With help from Alex Guillén and Darius Dixon

POPE POPE POPE, POPEITY POPE POPE: Today is the day! Yesterday, Pope Francis made clear that he would not rely on subtlety to convey his message, baldly stating that climate change, immigration, and poverty were pressing problems that the United States must deal with head on, as Pro's Andrew Restuccia reported . Today the Pope will stand before a Congress whose majority does not agree with him on the subject of climate change and see if he can face them down. Most analysts think he can't, but today he gets to make his case.

If you go and are a member of Congress, the Majority Leader advises you to be in your seats by 9 a.m. for the 10 a.m. speech. Don't be that one straggler who tries to sneak in the back late while the Speaker is making opening remarks.

If you go and are of the hoi polloi: There are many places to watch it streaming, presumably including C-Span, but here's another two links, just in case: http://to.pbs.org/1V8dN1d and http://bit.ly/1Fd2jHM. It will also be broadcast on a big screen at the West Front of the Capitol.

Meanwhile, Moby and a bunch of other musicians will play on the

National Mall to a climate change rally that organizers expect will draw tens of thousands of people. The group has been energized by Pope Francis' encyclical and his visit. The rally starts at 7:30 a.m. and will run until 12:30 p.m., between 3rd St. and 7th St., opening the door for work-a-day government employees to drop in on the concert for an early lunch.

YET ANOTHER THRILLING THURSDAY! I'm your host Eric Wolff, and I have to say the word 'Pope' is starting to lose all meaning for me. It's just a sequence of sounds, man. But with the Pontiff departing for New York today, I'll need all your energy tips, quips, and commentary at ewolff@politico.com, or follow us on Twitter @ericwolff, @Morning_Energy, and @POLITICOPro.

** **A message from the American Lung Association**: Kids want to play outside. But high ozone days can lead to asthma attacks and premature death. That's why 73 percent of Americans support stricter limits on smog pollution. Stronger limits mean less smog and healthier lungs for our kids: www.fightingforair.org **

CLINTON STARTING TO ALARM FOSSIL FUEL INDUSTRIES: In the wake of Hillary Clinton's revelation Tuesday that she opposed the Keystone XL pipeline, the candidate released a longer statement in which she emphasized a global commitment to fighting climate change and improving the nation's existing infrastructure. The statement did little to mollify fossil fuel interests suddenly alarmed at Clinton's shift on the environment, as Pro's Elana Schor reports : "In the past three weeks, Clinton has leaped to the left on three of Big Oil's most prized goals: Arctic offshore drilling, the GOP's plan to allow U.S. oil exports and the Keystone XL pipeline. And fossil-fuel supporters are starting to ask whether the Democrat who once struggled to connect with her party's green base will prove to be a bigger problem for the industry than they had expected...'In the industry, there's starting to be a real disconnect here' when it comes to Clinton, said Marty Durbin, president of America's Natural Gas Alliance."

Who you callin' dirty? In her detailed statement, Clinton called crude from Canadian tar sands, "North America's dirtiest fuel." A spokesman for TransCanada resents that remark, "The [California Air Resources Board] states there are 13 oil fields in California that generate more greenhouse gas emissions than Canadian diluted bitumen blends. And the 'dirtiest oil in North America' is produced just outside Los Angeles, where the Placerita oil field generates about twice the level of upstream emissions as the Canadian oil sands." So there!

ME FIRST: UNIONS LIKE THE OZONE STANDARD RIGHT WHERE IT IS, THANK YOU VERY MUCH : Fierce lobbying continues unabated around the EPA's ozone rule, as the AFL-CIO, the International

Brotherhood of Electrical Workers, and the building-trades unions, among others, head to the Office of Management and Budget today. The group of unions want the ozone standard to remain unchanged at 75 parts per billion, rather than lowering it to the 65 ppb to 70 ppb range EPA is considering. Brad Markell, executive director of the Industrial Union Council, told ME that tightening the standard was just one cut too many. "Industry is moving off-shore, trade hurts our industrial base. Right now we're staring at the [Trans Pacific Partnership]. Industries are going to decide it's best not to be in the United States."

SHOW ME THE MO...TION TO RECONSIDER THE MERGER: Exelon Corp. and Pepco Holdings have until the end of today to ask the D.C. Public Service Commission to reconsider regulators' rejection of the companies' merger last month. The two utilities haven't wavered from their plans to pursue the $6.8 billion deal and intend to press their case that putting Pepco under Exelon's roof is in the "public interest" for D.C. residents even though local regulators thought otherwise, and said so in no uncertain terms.

FIGHTIN' IRISH MEETS FIGHTIN' IRISH: EPA chief Gina McCarthy will voyage to Notre Dame tomorrow to talk up climate change and the Obama administration's agenda. It's quite the timing coup for McCarthy, a Catholic, who will talk in part about the school's recent encyclical-inspired decision to pare back its use of coal-fired electricity. Her agenda includes a discussion on clean energy with students and professors and a press conference with the school's president. An EPA spokeswoman noted that Notre Dame plays the University of Massachusetts - McCarthy's alma mater - in football on Saturday.

CBO - STREAM ACT WOULD SAVE $1 MILLION A YEAR: The Congressional Budget Office says that implementing a House GOP bill blocking the Interior Department's rewrite of the stream buffer zone rule would lead to net savings of about $1 million per year between 2020 and 2023. Rep. Alex Mooney's H.R. 1644, which cleared the Natural Resources Committee earlier this month, requires Interior to conduct a study of the original 1983 regulation and then wait a year before moving forward with a rewrite, essentially a three-year delay on the rule. The study would cost $2 million, but that is offset by royalties from federal leases that would be lost if the rule were implemented on schedule, CBO concluded. The score: http://1.usa.gov/1NUvan7

DIESEL GROUP: VOLKSWAGEN WHO? NEVER HEARD OF THEM : Earlier in the week, news broke that certain models of diesel-engine Volkswagens had been installed with devices intended to fool emissions tests. Now as the hammer falls on Volkswagen -- the company's CEO jumped ship yesterday -- the Diesel Technology Forum, a trade group,

is trying to avoid getting flattened. "The circumstances involving a single manufacturer do not define an entire technology, or an industry," the group said in a statement yesterday. "Vehicle manufacturers and engine makers have invested billions of dollars in research and development to successfully meet the most aggressive emissions standards in the world. They continue to work closely and cooperatively with the Environmental Protection Agency, California Air Resources Board, international regulatory bodies, as well as environmental and other interest groups toward common goals."

The modified VWs pumped an extra 950,000 tons of NO2 into the air each year, the equivalent of the entire United Kingdom power sector, according to an anlaysis by The Guardian. Looking at some EPA data, that's about half the 2014 NO2 emissions from U.S. power generation, and about a fifth of the NO2 emissions from all highway vehicles.

Stories from POLITICO Pro

Pope praises Obama on climate, calls for 'serious' action Back

By Andrew Restuccia | 09/24/2015 05:48AM EDT

Pope Francis praised President Barack Obama today for taking steps to cut greenhouse gas emissions, and he warned that climate change "is a problem which can no longer be left to a future generation."

The pope, speaking in English in front of the White House, said he is "encouraged" by the president's global warming agenda, which includes first-ever climate regulations for the country's fleet of power plants.

The pope made climate change a central part of his remarks, a signal that the issue will take center stage during his trip through the United States, and possibly during his speech to a joint session of Congress on Thursday.

He said countries "still have time to make the change needed" to tackle climate change, offering a hopeful message that "things can change."

The pope also warned of the effect that global warming has on the world's poor and vulnerable populations, calling for a "serious" response to climate change that takes into account "the millions of people living under a system which has overlooked them."

The comments appear to be intended to send a signal to those who have been reluctant to help fund poor countries' effort deal with the effects of climate change. Republicans in Congress, for example, are resisting Obama's pledge to put $3 billion over several years into the Green Climate Fund, which helps vulnerable countries adapt to the warming planet.

Invoking the words of Martin Luther King, Jr., the pope said the world hasn't done enough to solve the problem. "We can say that we have defaulted on a promissory note and now is the time to honor it," he said.

Back

Pope's climate message unlikely to sway Republicans Back

By Andrew Restuccia and Darren Goode | 09/24/2015 05:48AM EDT

The pope's pleas to take action on climate change will fall on deaf ears with many Republicans when he speaks before a joint session of Congress.

Pope Francis has already made the issue a prominent part of his visit to Washington, using brief remarks at the White House on Wednesday to call climate change "a problem which can no longer be left to (a) future generation," and he praised President Barack Obama for efforts to curtail U.S. greenhouse gas emissions.

"When it comes to the care of our common home, we are living at a critical moment of history," Pope Francis said.

It's those type of comments that have prompted Republican Rep. Paul Gosar to vow to skip the Pontiff's address to lawmakers on Thursday, though most Republicans largely plan to remain reverential during his swing through Washington, agreeing to disagree with the pope on climate change without drawing too much attention.

And lawmakers said this week that the pope's statements about the moral imperative of tackling global warming won't change Republicans' nearly-universal skepticism about climate science and their opposition to most comprehensive policies to rein in greenhouse gas emissions.

"I'll certainly listen respectfully, but I don't think that his speech is going to change my mind on it," Sen. John Barrasso, who rejects mainstream climate science, told POLITICO.

The pope's historic speech dovetails with a Hail Mary campaign by greens to persuade Republicans to back policies aimed at fighting climate change. But Democrats agreed that the pope's pleas are unlikely to change the stalemate in Congress any time soon.

"Progressives are usually right, but too soon. Politics is not for sprinters; it's for marathoners," Massachusetts Sen. Ed Markey, a Catholic Democrat, said during an event hosted by the Center for American Progress Monday.

"I think we have to be realistic about how quickly social change and opinion move," Rep. Ruben Gallego (D-Ariz.) told reporters on a conference call on Tuesday.

It remains to be seen how much time the pope will devote to climate change

when he speaks to Congress on Thursday. Some observers predicted he would reserve most of his climate-related comments for a speech on Friday at the United Nations, where he can make the case for an ambitious international climate change agreement. Ahead of the visit, Audible.com released a free recording of the pope's climate change encyclical.

In their respectful welcome to the pope, most Republicans are employing a strategy aimed at limiting the political blowback that accompanied Gosar's public pronouncement that he would boycott the speech because of the pope's climate advocacy. Despite Republicans' disagreement with the pope on climate change, none have announced plans to join Gosar's boycott of the pope to protest his climate activism. A Gosar spokesman had said other Republicans have expressed interest in joining the boycott but would not name any of the members.

"If you use that logic then you would never attend a State of the Union Address," Sen. Jim Risch (R-Idaho), who is Catholic, said of Gosar's boycott. "So whether you agree or disagree on issues, I don't think that should in any way undermine the respect that should be shown him."

Republicans have long seen the pope as an ally on issues like abortion, and they don't want to give Democrats an opening to make political hay out of their disagreement on climate.

"Look, even Catholics have problems with various popes. But that doesn't stop from recognizing the importance of papal leadership," said Sen. Orrin Hatch (R-Utah), who is Mormon. "And even though there are many in Congress who are not members of the Catholic faith, I think every one of us has tremendous respect for church leaders like the pope who are willing to stand up for principles."

But that hasn't stopped Democrats and their progressive allies from trying to shine a bright spotlight on the pontiff's climate message through speeches on the Senate floor and in rallies steps away from the U.S. Capitol.

Others have taken a more creative approach. For example, SumOfUs, a group that opposes the power of large corporations, and the Franciscan Action Network released a spoof of Donald Trump's "Apprentice" reality TV show that pits the pope against the GOP presidential candidates.

It's an effort to put pressure on recalcitrant climate skeptics and to give Democrats and their supporters another wedge against Republicans ahead of the 2016 elections.

Climate activists haven't given up hope that the pope's message will help convince moderate Republicans to come around on climate change in the

long term. They point to a recent resolution drafted by Republican Rep. Chris Gibson that acknowledges the threats posed by climate change and vows to address them. The resolution has 10 Republican co-sponsors.

"We've seen more willingness to talk about it, but it's going to take a while," said Patrick Carolan, executive director of the Franciscan Action Network.

Catholic observers also say the pope's message on climate change fits in with Republicans' anti-abortion stance.

"He views climate change as a pro-life issue. It's very possible that when he talks about climate change that he'll couple it for caring for unborn children," said Christopher Hale, the executive director of Catholics in Alliance for the Common Good.

"The way Pope Francis talks about climate change is not from the perspective of a secular environmental group," Hale added. "When the pope imagines climate change, he imagines refugees, not whales. And that is a message that could resonate with the GOP."

Back

As Clinton leans green, the oil industry frets Back

By Elana Schor | 09/24/2015 05:48AM EDT

Leaders of the oil and gas industry had long hoped that Hillary Clinton could be an easier president to work with than Barack Obama - but now they have reason to worry.

In the past three weeks, Clinton has leaped to the left on three of Big Oil's most prized goals: Arctic offshore drilling, the GOP's plan to allow U.S. oil exports and the Keystone XL pipeline. And fossil-fuel supporters are starting to ask whether the Democrat who once struggled to connect with her party's green base will prove to be a bigger problem for the industry than they had expected.

Oil and gas players are well aware that Clinton, reckoning with an unexpectedly close primary challenge from Sen. Bernie Sanders in Iowa and New Hampshire, has reasons to build her appeal among activists who oppose any new fossil-fuel production. But they wonder if this will herald a permanent policy shift for Clinton, who had rankled greens as secretary of state by overseeing a series of pro-Keystone environmental studies and creating a program to promote fracking overseas.

"In the industry, there's starting to be a real disconnect here" when it comes

to Clinton, said Marty Durbin, president of America's Natural Gas Alliance and a former Democratic aide. "I don't know how you put the pieces back together to say, 'This could be a president that really recognizes the opportunity we have here to meet all of our goals.'"

Rep. Kevin Cramer (R-N.D.), a close ally of his home state's oil and gas drillers, said he had sensed from them that they "hope that she'd be a more pragmatic liberal than the current occupant of the White House." But now, amid Clinton's new appeals to the environmental movement, Cramer offered the industry some advice: "Don't panic."

"Everything has to be put in the context of the situation, and clearly she's trying to stop the slip of polling in her own primary," he said.

Yet Clinton's camp sought to portray her Keystone opposition as anything but a recent move to bolster her standing against Sanders. Labor union officials knew in advance about her stance, an aide said Tuesday, and the campaign worked with the White House on the timing of the announcement.

Clinton followed her Keystone comments on Tuesday with a longer statement on Wednesday that called for a stronger global focus on climate change and an infrastructure plan that emphasized securing the nation's existing energy systems rather than new construction.

"I'm concerned when she says these things that it gives license to those who say 'She's with us, we can stop any project that's out there,'" said ANGA's Durbin. "We're not going to get to her vision of what we need for this country without getting the necessary infrastructure to make it happen."

Tom Pyle, president of the conservative group American Energy Alliance, urged the oil and gas industry to see Clinton's approach to energy as closer to Obama - whom Cramer called a "true believer" - than her husband.

"At the end of the day, they're not going to get Bill Clinton, that's for sure," he said.

Earlier this year, however, leaders of the American Petroleum Institute sent more positive signals about Clinton than they had offered Obama during his second term.

Regardless of who wins the White House in 2016, "it's going to be better than what we have now," American Petroleum Institute director Erik Milito told an audience at April's Conservative Political Action Conference.

Milito praised former President Bill Clinton for having "actually signed a piece of positive energy legislation" while in office, the industry-friendly

Deepwater Royalty Relief Act. But he warned dryly that Hillary Clinton's campaign chairman, John Podesta, is known as far from "supportive of policies that would help the oil and gas industry."

API President Jack Gerard, a close friend of Mitt Romney, told TheStreet.com in April that "if there's anybody that understands the need for lifting the crude export ban, it's Hillary Clinton."

Clinton's time as secretary of state shows that "she knows those European nations are clamoring to have our energy," Gerard added. API declined to comment further for this story.

Clinton formed the Global Shale Gas Initiative in 2010, marshaling U.S. expertise and technology to help foreign nations develop their expertise in tapping the type of rock that has been behind the domestic oil and gas boom. She acknowledged in a speech that year that touting natural gas "in some places is controversial," a nod to green groups' resistance to the fossil fuel with a lower carbon footprint than coal or oil.

"But natural gas is the cleanest fossil fuel available for power generation today," Clinton added then.

David Goldwyn, who worked alongside Clinton on shaping that program as her special envoy for international energy, said oil and gas has nothing to fear from her potential administration - so long as the industry agrees to "stop blocking" any plans to tackle climate change.

"She is somebody they can deal with who is less ideological than the current administration but no less committed to climate," Goldwyn said, predicting that if she is elected, "both the industry and environmental movement will see more concrete action in the next four years than the last."

But first Clinton has to dispatch Sanders and Gov. Martin O'Malley in the primary. Both of her Democratic rivals tout their long-standing opposition to Keystone and Arctic drilling as proof that the national front-runner is late to climate activists' party.

And some of those environmentalists, while elated by Clinton's recent moves, want to see her go still further left. May Boeve, executive director of 350 Action, said her green group is "still looking for the rest of Hillary Clinton's plan - to stand up to fossil fuel companies by committing to keep vast majorities of known carbon reserves underground."

Despite her opposition to Keystone and Arctic drilling, the oil and gas industry still has reasons to see Clinton as a possible partner.

Her comments on oil exports left room for an eventual deal on the issue, so long as any measure to end the 1970s-era ban on overseas crude sales "strikes the right balance." When a New Hampshire activist pressed her on greens' campaign to ban drilling on public lands, her positive but vague response mentioned only the possibility of "cutting back over time."

Goldwyn said her approach to national security "understands the importance of a robust production base" for fuel even as "she demands we have serious action on climate at the same time."

Still, as congressional Republicans lambaste Clinton for calling Obama's EPA emissions regulations "the floor, not the ceiling," the industry is likely to face its own choice between reaching out to Clinton or criticizing her more directly.

Oil interests are "still treating her like they expect her to win and somehow be their friends when she does," GOP energy lobbyist Michael McKenna said. "They are wrong on both counts."

By Eric Wolff | 09/24/2015 05:48AM EDT

With help from Alex Guillén and Darius Dixon

POPE POPE POPE, POPEITY POPE POPE: Today is the day! Yesterday, Pope Francis made clear that he would not rely on subtlety to convey his message, baldly stating that climate change, immigration, and poverty were pressing problems that the United States must deal with head on, as Pro's Andrew Restuccia reported . Today the Pope will stand before a Congress whose majority does not agree with him on the subject of climate change and see if he can face them down. Most analysts think he can't, but today he gets to make his case.

If you go and are a member of Congress, the Majority Leader advises you to be in your seats by 9 a.m. for the 10 a.m. speech. Don't be that one straggler who tries to sneak in the back late while the Speaker is making opening remarks.

If you go and are of the hoi polloi: There are many places to watch it streaming, presumably including C-Span, but here's another two links, just in case: http://to.pbs.org/1V8dN1d and http://bit.ly/1Fd2jHM. It will also be broadcast on a big screen at the West Front of the Capitol.

Meanwhile, Moby and a bunch of other musicians will play on the National Mall to a climate change rally that organizers expect will draw tens of thousands of people. The group has been energized by Pope Francis' encyclical and his visit. The rally starts at 7:30 a.m. and will run until 12:30 p.m., between 3rd St. and 7th St., opening the door for work-a-day government employees to drop in on the concert for an early lunch.

YET ANOTHER THRILLING THURSDAY! I'm your host Eric Wolff, and I have to say the word 'Pope' is starting to lose all meaning for me. It's just a sequence of sounds, man. But with the Pontiff departing for New York today, I'll need all your energy tips, quips, and commentary at ewolff@politico.com, or follow us on Twitter @ericwolff, @Morning_Energy, and @POLITICOPro.

** **A message from the American Lung Association**: Kids want to play outside. But high ozone days can lead to asthma attacks and premature death. That's why 73 percent of Americans support stricter limits on smog pollution. Stronger limits mean less smog and healthier lungs for our kids: www.fightingforair.org **

CLINTON STARTING TO ALARM FOSSIL FUEL INDUSTRIES: In the wake of Hillary Clinton's revelation Tuesday that she opposed the Keystone XL pipeline, the candidate released a longer statement in which she emphasized a global commitment to fighting climate change and improving the nation's existing infrastructure. The statement did little to mollify fossil fuel interests suddenly alarmed at Clinton's shift on the environment, as Pro's Elana Schor reports : "In the past three weeks, Clinton

has leaped to the left on three of Big Oil's most prized goals: Arctic offshore drilling, the GOP's plan to allow U.S. oil exports and the Keystone XL pipeline. And fossil-fuel supporters are starting to ask whether the Democrat who once struggled to connect with her party's green base will prove to be a bigger problem for the industry than they had expected...'In the industry, there's starting to be a real disconnect here' when it comes to Clinton, said Marty Durbin, president of America's Natural Gas Alliance."

Who you callin' dirty? In her detailed statement, Clinton called crude from Canadian tar sands, "North America's dirtiest fuel." A spokesman for TransCanada resents that remark, "The [California Air Resources Board] states there are 13 oil fields in California that generate more greenhouse gas emissions than Canadian diluted bitumen blends. And the 'dirtiest oil in North America' is produced just outside Los Angeles, where the Placerita oil field generates about twice the level of upstream emissions as the Canadian oil sands." So there!

ME FIRST: UNIONS LIKE THE OZONE STANDARD RIGHT WHERE IT IS, THANK YOU VERY MUCH : Fierce lobbying continues unabated around the EPA's ozone rule, as the AFL-CIO, the International Brotherhood of Electrical Workers, and the building-trades unions, among others, head to the Office of Management and Budget today. The group of unions want the ozone standard to remain unchanged at 75 parts per billion, rather than lowering it to the 65 ppb to 70 ppb range EPA is considering. Brad Markell, executive director of the Industrial Union Council, told ME that tightening the standard was just one cut too many. "Industry is moving off-shore, trade hurts our industrial base. Right now we're staring at the [Trans Pacific Partnership]. Industries are going to decide it's best not to be in the United States."

SHOW ME THE MO...TION TO RECONSIDER THE MERGER: Exelon Corp. and Pepco Holdings have until the end of today to ask the D.C. Public Service Commission to reconsider regulators' rejection of the companies' merger last month. The two utilities haven't wavered from their plans to pursue the $6.8 billion deal and intend to press their case that putting Pepco under Exelon's roof is in the "public interest" for D.C. residents even though local regulators thought otherwise, and said so in no uncertain terms.

FIGHTIN' IRISH MEETS FIGHTIN' IRISH: EPA chief Gina McCarthy will voyage to Notre Dame tomorrow to talk up climate change and the Obama administration's agenda. It's quite the timing coup for McCarthy, a Catholic, who will talk in part about the school's recent encyclical-inspired decision to pare back its use of coal-fired electricity. Her agenda includes a discussion on clean energy with students and professors and a press conference with the school's president. An EPA spokeswoman noted that

Notre Dame plays the University of Massachusetts - McCarthy's alma mater - in football on Saturday.

CBO - STREAM ACT WOULD SAVE $1 MILLION A YEAR: The Congressional Budget Office says that implementing a House GOP bill blocking the Interior Department's rewrite of the stream buffer zone rule would lead to net savings of about $1 million per year between 2020 and 2023. Rep. Alex Mooney's H.R. 1644, which cleared the Natural Resources Committee earlier this month, requires Interior to conduct a study of the original 1983 regulation and then wait a year before moving forward with a rewrite, essentially a three-year delay on the rule. The study would cost $2 million, but that is offset by royalties from federal leases that would be lost if the rule were implemented on schedule, CBO concluded. The score: http://1.usa.gov/1NUvan7

DIESEL GROUP: VOLKSWAGEN WHO? NEVER HEARD OF THEM : Earlier in the week, news broke that certain models of diesel-engine Volkswagens had been installed with devices intended to fool emissions tests. Now as the hammer falls on Volkswagen -- the company's CEO jumped ship yesterday -- the Diesel Technology Forum, a trade group, is trying to avoid getting flattened. "The circumstances involving a single manufacturer do not define an entire technology, or an industry," the group said in a statement yesterday. "Vehicle manufacturers and engine makers have invested billions of dollars in research and development to successfully meet the most aggressive emissions standards in the world. They continue to work closely and cooperatively with the Environmental Protection Agency, California Air Resources Board, international regulatory bodies, as well as environmental and other interest groups toward common goals."

The modified VWs pumped an extra 950,000 tons of NO2 into the air each year, the equivalent of the entire United Kingdom power sector, according to an anlaysis by The Guardian. Looking at some EPA data, that's about half the 2014 NO2 emissions from U.S. power generation, and about a fifth of the NO2 emissions from all highway vehicles.

Stories from POLITICO Pro

Pope praises Obama on climate, calls for 'serious' action Back

By Andrew Restuccia | 09/24/2015 05:48AM EDT

Pope Francis praised President Barack Obama today for taking steps to cut greenhouse gas emissions, and he warned that climate change "is a problem which can no longer be left to a future generation."

The pope, speaking in English in front of the White House, said he is "encouraged" by the president's global warming agenda, which includes first-ever climate regulations for the country's fleet of power plants.

The pope made climate change a central part of his remarks, a signal that the issue will take center stage during his trip through the United States, and possibly during his speech to a joint session of Congress on Thursday.

He said countries "still have time to make the change needed" to tackle climate change, offering a hopeful message that "things can change."

The pope also warned of the effect that global warming has on the world's poor and vulnerable populations, calling for a "serious" response to climate change that takes into account "the millions of people living under a system which has overlooked them."

The comments appear to be intended to send a signal to those who have been reluctant to help fund poor countries' effort deal with the effects of climate change. Republicans in Congress, for example, are resisting Obama's pledge to put $3 billion over several years into the Green Climate Fund, which helps vulnerable countries adapt to the warming planet.

Invoking the words of Martin Luther King, Jr., the pope said the world hasn't done enough to solve the problem. "We can say that we have defaulted on a promissory note and now is the time to honor it," he said.

Back

Pope's climate message unlikely to sway Republicans Back

By Andrew Restuccia and Darren Goode | 09/24/2015 05:48AM EDT

The pope's pleas to take action on climate change will fall on deaf ears with many Republicans when he speaks before a joint session of Congress.

Pope Francis has already made the issue a prominent part of his visit to Washington, using brief remarks at the White House on Wednesday to call climate change "a problem which can no longer be left to (a) future generation," and he praised President Barack Obama for efforts to curtail U.S. greenhouse gas emissions.

"When it comes to the care of our common home, we are living at a critical moment of history," Pope Francis said.

It's those type of comments that have prompted Republican Rep. Paul Gosar to vow to skip the Pontiff's address to lawmakers on Thursday, though most Republicans largely plan to remain reverential during his swing through Washington, agreeing to disagree with the pope on climate change without drawing too much attention.

And lawmakers said this week that the pope's statements about the moral imperative of tackling global warming won't change Republicans' nearly-universal skepticism about climate science and their opposition to most

comprehensive policies to rein in greenhouse gas emissions.

"I'll certainly listen respectfully, but I don't think that his speech is going to change my mind on it," Sen. John Barrasso, who rejects mainstream climate science, told POLITICO.

The pope's historic speech dovetails with a Hail Mary campaign by greens to persuade Republicans to back policies aimed at fighting climate change. But Democrats agreed that the pope's pleas are unlikely to change the stalemate in Congress any time soon.

"Progressives are usually right, but too soon. Politics is not for sprinters; it's for marathoners," Massachusetts Sen. Ed Markey, a Catholic Democrat, said during an event hosted by the Center for American Progress Monday.

"I think we have to be realistic about how quickly social change and opinion move," Rep. Ruben Gallego (D-Ariz.) told reporters on a conference call on Tuesday.

It remains to be seen how much time the pope will devote to climate change when he speaks to Congress on Thursday. Some observers predicted he would reserve most of his climate-related comments for a speech on Friday at the United Nations, where he can make the case for an ambitious international climate change agreement. Ahead of the visit, Audible.com released a free recording of the pope's climate change encyclical.

In their respectful welcome to the pope, most Republicans are employing a strategy aimed at limiting the political blowback that accompanied Gosar's public pronouncement that he would boycott the speech because of the pope's climate advocacy. Despite Republicans' disagreement with the pope on climate change, none have announced plans to join Gosar's boycott of the pope to protest his climate activism. A Gosar spokesman had said other Republicans have expressed interest in joining the boycott but would not name any of the members.

"If you use that logic then you would never attend a State of the Union Address," Sen. Jim Risch (R-Idaho), who is Catholic, said of Gosar's boycott. "So whether you agree or disagree on issues, I don't think that should in any way undermine the respect that should be shown him."

Republicans have long seen the pope as an ally on issues like abortion, and they don't want to give Democrats an opening to make political hay out of their disagreement on climate.

"Look, even Catholics have problems with various popes. But that doesn't stop from recognizing the importance of papal leadership," said Sen. Orrin

Hatch (R-Utah), who is Mormon. "And even though there are many in Congress who are not members of the Catholic faith, I think every one of us has tremendous respect for church leaders like the pope who are willing to stand up for principles."

But that hasn't stopped Democrats and their progressive allies from trying to shine a bright spotlight on the pontiff's climate message through speeches on the Senate floor and in rallies steps away from the U.S. Capitol.

Others have taken a more creative approach. For example, SumOfUs, a group that opposes the power of large corporations, and the Franciscan Action Network released a spoof of Donald Trump's "Apprentice" reality TV show that pits the pope against the GOP presidential candidates.

It's an effort to put pressure on recalcitrant climate skeptics and to give Democrats and their supporters another wedge against Republicans ahead of the 2016 elections.

Climate activists haven't given up hope that the pope's message will help convince moderate Republicans to come around on climate change in the long term. They point to a recent resolution drafted by Republican Rep. Chris Gibson that acknowledges the threats posed by climate change and vows to address them. The resolution has 10 Republican co-sponsors.

"We've seen more willingness to talk about it, but it's going to take a while," said Patrick Carolan, executive director of the Franciscan Action Network.

Catholic observers also say the pope's message on climate change fits in with Republicans' anti-abortion stance.

"He views climate change as a pro-life issue. It's very possible that when he talks about climate change that he'll couple it for caring for unborn children," said Christopher Hale, the executive director of Catholics in Alliance for the Common Good.

"The way Pope Francis talks about climate change is not from the perspective of a secular environmental group," Hale added. "When the pope imagines climate change, he imagines refugees, not whales. And that is a message that could resonate with the GOP."

As Clinton leans green, the oil industry frets Back

By Elana Schor | 09/24/2015 05:48AM EDT

Leaders of the oil and gas industry had long hoped that Hillary Clinton could be an easier president to work with than Barack Obama - but now they have reason to worry.

In the past three weeks, Clinton has leaped to the left on three of Big Oil's most prized goals: Arctic offshore drilling, the GOP's plan to allow U.S. oil exports and the Keystone XL pipeline. And fossil-fuel supporters are starting to ask whether the Democrat who once struggled to connect with her party's green base will prove to be a bigger problem for the industry than they had expected.

Oil and gas players are well aware that Clinton, reckoning with an unexpectedly close primary challenge from Sen. Bernie Sanders in Iowa and New Hampshire, has reasons to build her appeal among activists who oppose any new fossil-fuel production. But they wonder if this will herald a permanent policy shift for Clinton, who had rankled greens as secretary of state by overseeing a series of pro-Keystone environmental studies and creating a program to promote fracking overseas.

"In the industry, there's starting to be a real disconnect here" when it comes to Clinton, said Marty Durbin, president of America's Natural Gas Alliance and a former Democratic aide. "I don't know how you put the pieces back together to say, 'This could be a president that really recognizes the opportunity we have here to meet all of our goals.'"

Rep. Kevin Cramer (R-N.D.), a close ally of his home state's oil and gas drillers, said he had sensed from them that they "hope that she'd be a more pragmatic liberal than the current occupant of the White House." But now, amid Clinton's new appeals to the environmental movement, Cramer offered the industry some advice: "Don't panic."

"Everything has to be put in the context of the situation, and clearly she's trying to stop the slip of polling in her own primary," he said.

Yet Clinton's camp sought to portray her Keystone opposition as anything but a recent move to bolster her standing against Sanders. Labor union officials knew in advance about her stance, an aide said Tuesday, and the campaign worked with the White House on the timing of the announcement.

Clinton followed her Keystone comments on Tuesday with a longer statement on Wednesday that called for a stronger global focus on climate change and an infrastructure plan that emphasized securing the nation's existing energy systems rather than new construction.

"I'm concerned when she says these things that it gives license to those who say 'She's with us, we can stop any project that's out there,'" said ANGA's

Durbin. "We're not going to get to her vision of what we need for this country without getting the necessary infrastructure to make it happen."

Tom Pyle, president of the conservative group American Energy Alliance, urged the oil and gas industry to see Clinton's approach to energy as closer to Obama - whom Cramer called a "true believer" - than her husband.

"At the end of the day, they're not going to get Bill Clinton, that's for sure," he said.

Earlier this year, however, leaders of the American Petroleum Institute sent more positive signals about Clinton than they had offered Obama during his second term.

Regardless of who wins the White House in 2016, "it's going to be better than what we have now," American Petroleum Institute director Erik Milito told an audience at April's Conservative Political Action Conference.

Milito praised former President Bill Clinton for having "actually signed a piece of positive energy legislation" while in office, the industry-friendly Deepwater Royalty Relief Act. But he warned dryly that Hillary Clinton's campaign chairman, John Podesta, is known as far from "supportive of policies that would help the oil and gas industry."

API President Jack Gerard, a close friend of Mitt Romney, told TheStreet.com in April that "if there's anybody that understands the need for lifting the crude export ban, it's Hillary Clinton."

Clinton's time as secretary of state shows that "she knows those European nations are clamoring to have our energy," Gerard added. API declined to comment further for this story.

Clinton formed the Global Shale Gas Initiative in 2010, marshaling U.S. expertise and technology to help foreign nations develop their expertise in tapping the type of rock that has been behind the domestic oil and gas boom. She acknowledged in a speech that year that touting natural gas "in some places is controversial," a nod to green groups' resistance to the fossil fuel with a lower carbon footprint than coal or oil.

"But natural gas is the cleanest fossil fuel available for power generation today," Clinton added then.

David Goldwyn, who worked alongside Clinton on shaping that program as her special envoy for international energy, said oil and gas has nothing to fear from her potential administration - so long as the industry agrees to "stop blocking" any plans to tackle climate change.

"She is somebody they can deal with who is less ideological than the current administration but no less committed to climate," Goldwyn said, predicting that if she is elected, "both the industry and environmental movement will see more concrete action in the next four years than the last."

But first Clinton has to dispatch Sanders and Gov. Martin O'Malley in the primary. Both of her Democratic rivals tout their long-standing opposition to Keystone and Arctic drilling as proof that the national front-runner is late to climate activists' party.

And some of those environmentalists, while elated by Clinton's recent moves, want to see her go still further left. May Boeve, executive director of 350 Action, said her green group is "still looking for the rest of Hillary Clinton's plan - to stand up to fossil fuel companies by committing to keep vast majorities of known carbon reserves underground."

Despite her opposition to Keystone and Arctic drilling, the oil and gas industry still has reasons to see Clinton as a possible partner.

Her comments on oil exports left room for an eventual deal on the issue, so long as any measure to end the 1970s-era ban on overseas crude sales "strikes the right balance." When a New Hampshire activist pressed her on greens' campaign to ban drilling on public lands, her positive but vague response mentioned only the possibility of "cutting back over time."

Goldwyn said her approach to national security "understands the importance of a robust production base" for fuel even as "she demands we have serious action on climate at the same time."

Still, as congressional Republicans lambaste Clinton for calling Obama's EPA emissions regulations "the floor, not the ceiling," the industry is likely to face its own choice between reaching out to Clinton or criticizing her more directly.

Oil interests are "still treating her like they expect her to win and somehow be their friends when she does," GOP energy lobbyist Michael McKenna said. "They are wrong on both counts."

By Eric Wolff | 09/24/2015 05:48AM EDT

With help from Alex Guillén and Darius Dixon

POPE POPE POPE, POPEITY POPE POPE: Today is the day! Yesterday, Pope Francis made clear that he would not rely on subtlety to convey his message, baldly stating that climate change, immigration, and poverty were pressing problems that the United States must deal with head on, as Pro's Andrew Restuccia reported . Today the Pope will stand before a Congress whose majority does not agree with him on the subject of climate change and see if he can face them down. Most analysts think he can't, but today he gets to make his case.

If you go and are a member of Congress, the Majority Leader advises you to be in your seats by 9 a.m. for the 10 a.m. speech. Don't be that one straggler who tries to sneak in the back late while the Speaker is making opening remarks.

If you go and are of the hoi polloi: There are many places to watch it streaming, presumably including C-Span, but here's another two links, just in case: http://to.pbs.org/1V8dN1d and http://bit.ly/1Fd2jHM. It will also be broadcast on a big screen at the West Front of the Capitol.

Meanwhile, Moby and a bunch of other musicians will play on the National Mall to a climate change rally that organizers expect will draw tens of thousands of people. The group has been energized by Pope Francis' encyclical and his visit. The rally starts at 7:30 a.m. and will run until 12:30 p.m., between 3rd St. and 7th St., opening the door for work-a-day government employees to drop in on the concert for an early lunch.

YET ANOTHER THRILLING THURSDAY! I'm your host Eric Wolff, and I have to say the word 'Pope' is starting to lose all meaning for me. It's

just a sequence of sounds, man. But with the Pontiff departing for New York today, I'll need all your energy tips, quips, and commentary at ewolff@politico.com, or follow us on Twitter @ericwolff, @Morning_Energy, and @POLITICOPro.

** **A message from the American Lung Association**: Kids want to play outside. But high ozone days can lead to asthma attacks and premature death. That's why 73 percent of Americans support stricter limits on smog pollution. Stronger limits mean less smog and healthier lungs for our kids: www.fightingforair.org **

CLINTON STARTING TO ALARM FOSSIL FUEL INDUSTRIES: In the wake of Hillary Clinton's revelation Tuesday that she opposed the Keystone XL pipeline, the candidate released a longer statement in which she emphasized a global commitment to fighting climate change and improving the nation's existing infrastructure. The statement did little to mollify fossil fuel interests suddenly alarmed at Clinton's shift on the environment, as Pro's Elana Schor reports : "In the past three weeks, Clinton has leaped to the left on three of Big Oil's most prized goals: Arctic offshore drilling, the GOP's plan to allow U.S. oil exports and the Keystone XL pipeline. And fossil-fuel supporters are starting to ask whether the Democrat who once struggled to connect with her party's green base will prove to be a bigger problem for the industry than they had expected...'In the industry, there's starting to be a real disconnect here' when it comes to Clinton, said Marty Durbin, president of America's Natural Gas Alliance."

Who you callin' dirty? In her detailed statement, Clinton called crude from Canadian tar sands, "North America's dirtiest fuel." A spokesman for TransCanada resents that remark, "The [California Air Resources Board] states there are 13 oil fields in California that generate more greenhouse gas emissions than Canadian diluted bitumen blends. And the 'dirtiest oil in North America' is produced just outside Los Angeles, where the Placerita oil field generates about twice the level of upstream emissions as the Canadian oil sands." So there!

ME FIRST: UNIONS LIKE THE OZONE STANDARD RIGHT WHERE IT IS, THANK YOU VERY MUCH : Fierce lobbying continues unabated around the EPA's ozone rule, as the AFL-CIO, the International Brotherhood of Electrical Workers, and the building-trades unions, among others, head to the Office of Management and Budget today. The group of unions want the ozone standard to remain unchanged at 75 parts per billion, rather than lowering it to the 65 ppb to 70 ppb range EPA is considering. Brad Markell, executive director of the Industrial Union Council, told ME that tightening the standard was just one cut too many. "Industry is moving off-shore, trade hurts our industrial base. Right now we're staring at the [Trans Pacific Partnership]. Industries are going to decide it's best not to be

in the United States."

SHOW ME THE MO...TION TO RECONSIDER THE MERGER: Exelon Corp. and Pepco Holdings have until the end of today to ask the D.C. Public Service Commission to reconsider regulators' rejection of the companies' merger last month. The two utilities haven't wavered from their plans to pursue the $6.8 billion deal and intend to press their case that putting Pepco under Exelon's roof is in the "public interest" for D.C. residents even though local regulators thought otherwise, and said so in no uncertain terms.

FIGHTIN' IRISH MEETS FIGHTIN' IRISH: EPA chief Gina McCarthy will voyage to Notre Dame tomorrow to talk up climate change and the Obama administration's agenda. It's quite the timing coup for McCarthy, a Catholic, who will talk in part about the school's recent encyclical-inspired decision to pare back its use of coal-fired electricity. Her agenda includes a discussion on clean energy with students and professors and a press conference with the school's president. An EPA spokeswoman noted that Notre Dame plays the University of Massachusetts - McCarthy's alma mater - in football on Saturday.

CBO - STREAM ACT WOULD SAVE $1 MILLION A YEAR: The Congressional Budget Office says that implementing a House GOP bill blocking the Interior Department's rewrite of the stream buffer zone rule would lead to net savings of about $1 million per year between 2020 and 2023. Rep. Alex Mooney's H.R. 1644, which cleared the Natural Resources Committee earlier this month, requires Interior to conduct a study of the original 1983 regulation and then wait a year before moving forward with a rewrite, essentially a three-year delay on the rule. The study would cost $2 million, but that is offset by royalties from federal leases that would be lost if the rule were implemented on schedule, CBO concluded. The score: http://1.usa.gov/1NUvan7

DIESEL GROUP: VOLKSWAGEN WHO? NEVER HEARD OF THEM : Earlier in the week, news broke that certain models of diesel-engine Volkswagens had been installed with devices intended to fool emissions tests. Now as the hammer falls on Volkswagen -- the company's CEO jumped ship yesterday -- the Diesel Technology Forum, a trade group, is trying to avoid getting flattened. "The circumstances involving a single manufacturer do not define an entire technology, or an industry," the group said in a statement yesterday. "Vehicle manufacturers and engine makers have invested billions of dollars in research and development to successfully meet the most aggressive emissions standards in the world. They continue to work closely and cooperatively with the Environmental Protection Agency, California Air Resources Board, international regulatory bodies, as well as environmental and other interest groups toward common goals."

The modified VWs pumped an extra 950,000 tons of NO2 into the air each year, the equivalent of the entire United Kingdom power sector, according to an anlaysis by The Guardian. Looking at some EPA data, that's about half the 2014 NO2 emissions from U.S. power generation, and about a fifth of the NO2 emissions from all highway vehicles.

Stories from POLITICO Pro

Pope praises Obama on climate, calls for 'serious' action Back

By Andrew Restuccia | 09/24/2015 05:48AM EDT

Pope Francis praised President Barack Obama today for taking steps to cut greenhouse gas emissions, and he warned that climate change "is a problem which can no longer be left to a future generation."

The pope, speaking in English in front of the White House, said he is "encouraged" by the president's global warming agenda, which includes first-ever climate regulations for the country's fleet of power plants.

The pope made climate change a central part of his remarks, a signal that the issue will take center stage during his trip through the United States, and possibly during his speech to a joint session of Congress on Thursday.

He said countries "still have time to make the change needed" to tackle climate change, offering a hopeful message that "things can change."

The pope also warned of the effect that global warming has on the world's poor and vulnerable populations, calling for a "serious" response to climate change that takes into account "the millions of people living under a system which has overlooked them."

The comments appear to be intended to send a signal to those who have been reluctant to help fund poor countries' effort deal with the effects of climate change. Republicans in Congress, for example, are resisting Obama's pledge to put $3 billion over several years into the Green Climate Fund, which helps vulnerable countries adapt to the warming planet.

Invoking the words of Martin Luther King, Jr., the pope said the world hasn't done enough to solve the problem. "We can say that we have defaulted on a promissory note and now is the time to honor it," he said.

Back

Pope's climate message unlikely to sway Republicans Back

By Andrew Restuccia and Darren Goode | 09/24/2015 05:48AM EDT

The pope's pleas to take action on climate change will fall on deaf ears with many Republicans when he speaks before a joint session of Congress.

Pope Francis has already made the issue a prominent part of his visit to Washington, using brief remarks at the White House on Wednesday to call climate change "a problem which can no longer be left to (a) future generation," and he praised President Barack Obama for efforts to curtail U.S. greenhouse gas emissions.

"When it comes to the care of our common home, we are living at a critical moment of history," Pope Francis said.

It's those type of comments that have prompted Republican Rep. Paul Gosar to vow to skip the Pontiff's address to lawmakers on Thursday, though most Republicans largely plan to remain reverential during his swing through Washington, agreeing to disagree with the pope on climate change without drawing too much attention.

And lawmakers said this week that the pope's statements about the moral imperative of tackling global warming won't change Republicans' nearly-universal skepticism about climate science and their opposition to most comprehensive policies to rein in greenhouse gas emissions.

"I'll certainly listen respectfully, but I don't think that his speech is going to change my mind on it," Sen. John Barrasso, who rejects mainstream climate science, told POLITICO.

The pope's historic speech dovetails with a Hail Mary campaign by greens to persuade Republicans to back policies aimed at fighting climate change. But Democrats agreed that the pope's pleas are unlikely to change the stalemate in Congress any time soon.

"Progressives are usually right, but too soon. Politics is not for sprinters; it's for marathoners," Massachusetts Sen. Ed Markey, a Catholic Democrat, said during an event hosted by the Center for American Progress Monday.

"I think we have to be realistic about how quickly social change and opinion move," Rep. Ruben Gallego (D-Ariz.) told reporters on a conference call on Tuesday.

It remains to be seen how much time the pope will devote to climate change when he speaks to Congress on Thursday. Some observers predicted he would reserve most of his climate-related comments for a speech on Friday at the United Nations, where he can make the case for an ambitious international climate change agreement. Ahead of the visit, Audible.com released a free recording of the pope's climate change encyclical.

In their respectful welcome to the pope, most Republicans are employing a strategy aimed at limiting the political blowback that accompanied Gosar's

public pronouncement that he would boycott the speech because of the pope's climate advocacy. Despite Republicans' disagreement with the pope on climate change, none have announced plans to join Gosar's boycott of the pope to protest his climate activism. A Gosar spokesman had said other Republicans have expressed interest in joining the boycott but would not name any of the members.

"If you use that logic then you would never attend a State of the Union Address," Sen. Jim Risch (R-Idaho), who is Catholic, said of Gosar's boycott. "So whether you agree or disagree on issues, I don't think that should in any way undermine the respect that should be shown him."

Republicans have long seen the pope as an ally on issues like abortion, and they don't want to give Democrats an opening to make political hay out of their disagreement on climate.

"Look, even Catholics have problems with various popes. But that doesn't stop from recognizing the importance of papal leadership," said Sen. Orrin Hatch (R-Utah), who is Mormon. "And even though there are many in Congress who are not members of the Catholic faith, I think every one of us has tremendous respect for church leaders like the pope who are willing to stand up for principles."

But that hasn't stopped Democrats and their progressive allies from trying to shine a bright spotlight on the pontiff's climate message through speeches on the Senate floor and in rallies steps away from the U.S. Capitol.

Others have taken a more creative approach. For example, SumOfUs, a group that opposes the power of large corporations, and the Franciscan Action Network released a spoof of Donald Trump's "Apprentice" reality TV show that pits the pope against the GOP presidential candidates.

It's an effort to put pressure on recalcitrant climate skeptics and to give Democrats and their supporters another wedge against Republicans ahead of the 2016 elections.

Climate activists haven't given up hope that the pope's message will help convince moderate Republicans to come around on climate change in the long term. They point to a recent resolution drafted by Republican Rep. Chris Gibson that acknowledges the threats posed by climate change and vows to address them. The resolution has 10 Republican co-sponsors.

"We've seen more willingness to talk about it, but it's going to take a while," said Patrick Carolan, executive director of the Franciscan Action Network.

Catholic observers also say the pope's message on climate change fits in with

Republicans' anti-abortion stance.

"He views climate change as a pro-life issue. It's very possible that when he talks about climate change that he'll couple it for caring for unborn children," said Christopher Hale, the executive director of Catholics in Alliance for the Common Good.

"The way Pope Francis talks about climate change is not from the perspective of a secular environmental group," Hale added. "When the pope imagines climate change, he imagines refugees, not whales. And that is a message that could resonate with the GOP."

Back

As Clinton leans green, the oil industry frets Back

By Elana Schor | 09/24/2015 05:48AM EDT

Leaders of the oil and gas industry had long hoped that Hillary Clinton could be an easier president to work with than Barack Obama - but now they have reason to worry.

In the past three weeks, Clinton has leaped to the left on three of Big Oil's most prized goals: Arctic offshore drilling, the GOP's plan to allow U.S. oil exports and the Keystone XL pipeline. And fossil-fuel supporters are starting to ask whether the Democrat who once struggled to connect with her party's green base will prove to be a bigger problem for the industry than they had expected.

Oil and gas players are well aware that Clinton, reckoning with an unexpectedly close primary challenge from Sen. Bernie Sanders in Iowa and New Hampshire, has reasons to build her appeal among activists who oppose any new fossil-fuel production. But they wonder if this will herald a permanent policy shift for Clinton, who had rankled greens as secretary of state by overseeing a series of pro-Keystone environmental studies and creating a program to promote fracking overseas.

"In the industry, there's starting to be a real disconnect here" when it comes to Clinton, said Marty Durbin, president of America's Natural Gas Alliance and a former Democratic aide. "I don't know how you put the pieces back together to say, 'This could be a president that really recognizes the opportunity we have here to meet all of our goals.'"

Rep. Kevin Cramer (R-N.D.), a close ally of his home state's oil and gas drillers, said he had sensed from them that they "hope that she'd be a more pragmatic liberal than the current occupant of the White House." But now,

amid Clinton's new appeals to the environmental movement, Cramer offered the industry some advice: "Don't panic."

"Everything has to be put in the context of the situation, and clearly she's trying to stop the slip of polling in her own primary," he said.

Yet Clinton's camp sought to portray her Keystone opposition as anything but a recent move to bolster her standing against Sanders. Labor union officials knew in advance about her stance, an aide said Tuesday, and the campaign worked with the White House on the timing of the announcement.

Clinton followed her Keystone comments on Tuesday with a longer statement on Wednesday that called for a stronger global focus on climate change and an infrastructure plan that emphasized securing the nation's existing energy systems rather than new construction.

"I'm concerned when she says these things that it gives license to those who say 'She's with us, we can stop any project that's out there,'" said ANGA's Durbin. "We're not going to get to her vision of what we need for this country without getting the necessary infrastructure to make it happen."

Tom Pyle, president of the conservative group American Energy Alliance, urged the oil and gas industry to see Clinton's approach to energy as closer to Obama - whom Cramer called a "true believer" - than her husband.

"At the end of the day, they're not going to get Bill Clinton, that's for sure," he said.

Earlier this year, however, leaders of the American Petroleum Institute sent more positive signals about Clinton than they had offered Obama during his second term.

Regardless of who wins the White House in 2016, "it's going to be better than what we have now," American Petroleum Institute director Erik Milito told an audience at April's Conservative Political Action Conference.

Milito praised former President Bill Clinton for having "actually signed a piece of positive energy legislation" while in office, the industry-friendly Deepwater Royalty Relief Act. But he warned dryly that Hillary Clinton's campaign chairman, John Podesta, is known as far from "supportive of policies that would help the oil and gas industry."

API President Jack Gerard, a close friend of Mitt Romney, told TheStreet.com in April that "if there's anybody that understands the need for lifting the crude export ban, it's Hillary Clinton."

Clinton's time as secretary of state shows that "she knows those European nations are clamoring to have our energy," Gerard added. API declined to comment further for this story.

Clinton formed the Global Shale Gas Initiative in 2010, marshaling U.S. expertise and technology to help foreign nations develop their expertise in tapping the type of rock that has been behind the domestic oil and gas boom. She acknowledged in a speech that year that touting natural gas "in some places is controversial," a nod to green groups' resistance to the fossil fuel with a lower carbon footprint than coal or oil.

"But natural gas is the cleanest fossil fuel available for power generation today," Clinton added then.

David Goldwyn, who worked alongside Clinton on shaping that program as her special envoy for international energy, said oil and gas has nothing to fear from her potential administration - so long as the industry agrees to "stop blocking" any plans to tackle climate change.

"She is somebody they can deal with who is less ideological than the current administration but no less committed to climate," Goldwyn said, predicting that if she is elected, "both the industry and environmental movement will see more concrete action in the next four years than the last."

But first Clinton has to dispatch Sanders and Gov. Martin O'Malley in the primary. Both of her Democratic rivals tout their long-standing opposition to Keystone and Arctic drilling as proof that the national front-runner is late to climate activists' party.

And some of those environmentalists, while elated by Clinton's recent moves, want to see her go still further left. May Boeve, executive director of 350 Action, said her green group is "still looking for the rest of Hillary Clinton's plan - to stand up to fossil fuel companies by committing to keep vast majorities of known carbon reserves underground."

Despite her opposition to Keystone and Arctic drilling, the oil and gas industry still has reasons to see Clinton as a possible partner.

Her comments on oil exports left room for an eventual deal on the issue, so long as any measure to end the 1970s-era ban on overseas crude sales "strikes the right balance." When a New Hampshire activist pressed her on greens' campaign to ban drilling on public lands, her positive but vague response mentioned only the possibility of "cutting back over time."

Goldwyn said her approach to national security "understands the importance of a robust production base" for fuel even as "she demands we have serious

action on climate at the same time."

Still, as congressional Republicans lambaste Clinton for calling Obama's EPA emissions regulations "the floor, not the ceiling," the industry is likely to face its own choice between reaching out to Clinton or criticizing her more directly.

Oil interests are "still treating her like they expect her to win and somehow be their friends when she does," GOP energy lobbyist Michael McKenna said. "They are wrong on both counts."

Subject: Morning Consult Energy, Presented by the American Coalition for Clean Coal Electricity: Pope Expected to Call for Climate Change Action in Congressional Address; Volkswagen CEO Resigns

By Colleen Leahy

Today's Washington Brief

- Pope Francis will address a joint session of Congress today, and he's expected to issue a strong call for action on climate change that may fall on some deaf ears with the House slated to debate legislation this afternoon that would bar federal agencies from considering the "social cost of carbon" in environmental reviews and permitting decisions. (National Journal)

- The pontiff spent much of his White House speech yesterday addressing climate change, voicing support for President Obama's Clean Power Plan. (The New York Times)

- The greater sage grouse won't be included on the endangered species list, but the Bureau of Land Management and the U.S. Forest Service have plans to essentially block oil and gas development across tens of millions of acres of the bird's habitat. Republicans say that will have the same effect as listing the bird. (Morning Consult)

Today's Business Brief

- Volkswagen Chief Executive Officer Martin Winterkorn resigned amid the German automaker's emissions-falsification scandal. (CNN)

- French multinational oil and gas company Total SA said it would invest $500 million annually in renewables. (Bloomberg News)

- As companies like Tesla drive up the demand for cobalt, a chemical element used in batteries, mining companies are racing to become cobalt's top producer. Eurasian Resources Group is leading that charge with a $2.2 billion mining project in the Democratic Republic of Congo. (Bloomberg News)

General

After Pope's Speech, House Turns to Bill That Bars Tallying "Social Cost" of Carbon
Ben Geman, National Journal

Con-gress will wel-come Pope Fran-cis with open arms Thursday, but the hours after his speech will likely bring fresh evid-ence that his calls for cli-mate-change ac-tion are un-likely to al-ter House GOP policy goals.

Volkswagen CEO quits over 'grave crisis'
Mark Thompson and Chris Liakos, CNN

Volkswagen chief executive Martin Winterkorn resigned Wednesday as a growing scandal over falsified emissions tests rocked the world's biggest carmaker.

Republicans, Environmentalists Grouse Over Protection Plans
Reid Wilson, Morning Consult

After more than 15 years of internal debate and court fights, the Interior Department said Tuesday it will not include the greater sage grouse on the endangered species list. Instead, the agency said BLM and the U.S. Forest Service would finalize land-

use plans that would help conserve tens of millions of acres of sage grouse habitat, effectively locking those lands off from development.

Senate Dems see energy bill as catnip for voters
Jean Chemnick and Hannah Northey, E&E

Senate Democrats who unveiled a sweeping energy bill yesterday are hoping their long list of clean power provisions attracts voters next fall. Combining clean energy and jobs is "an electric combination that I believe is going to take the country by storm, that I believe will be a major issue in the 2016 campaign," Sen. Chuck Schumer (D-N.Y.) said as the bill was unveiled on Capitol Hill yesterday.

Tesla Battery Push Spurs ENRC Owner to Target Cobalt Mining
Yuliya Fedorinova, Bloomberg News

Eurasian Resources Group plans to use a $2.2 billion project in the Democratic Republic of Congo to become the world's top cobalt producer and tap growing demand for batteries from companies including Tesla Motors Inc.

EPA announces $1.2 million in new funds to clean up contaminated sites in Maine
Gillian Graham, Portland Press Herald

The Environmental Protection Agency on Wednesday announced grants totaling more than $4 million to clean up contaminated industrial sites across New England. The $4.3 million in supplemental funds will go to a variety of so-called "brownfield" sites across the region, including $1.2 million for cleanup and redevelopment projects in Maine.

Schumer Stakes Out Budget Positions for Democrats
Will Dobbs-Allsopp, Morning Consult

Senate Majority Leader Mitch McConnell (R-Ky.) on Tuesday took the first step in trying to avert a shutdown at the end of the month, when appropriations for the current fiscal year are set to expire, by introducing a short-term funding bill that would keep the government open through Dec. 11. But even before McConnell introduced the continuing resolution, Sen. Chuck Schumer (D-N.Y.) and fellow Senate Democrats were already looking past the immediate government funding debate to stake out positions on spending and budget priorities for the oncoming clash later this fall.

U.S. Stock-Index Futures Decline Ahead of Yellen's Speech
Sofia Horta E Costa, Bloomberg News

Uncertainty over the Federal Reserve's stimulus policy prevailed among investors, sending U.S. stock-index futures lower, with the Standard & Poor's 500 Index at its

lowest level in almost three weeks. S&P 500 E-mini contracts expiring in December slipped 1 percent to 1,909 at 7:19 a.m. in New York, after swinging between gains and losses. The equity gauge fell for the fourth time in five days yesterday as a rout in crude prices weighed on commodity stocks. Dow Jones Industrial Average futures dropped 142 points, also 0.9 percent to 16,045 today.

Oil & Natural Gas

Oil rebounds near $48 after sharp fall
Reuters

Oil steadied at around $48 a barrel on Thursday, as investors sought bargains after crude futures fell sharply the previous day on an unexpectedly large buildup in U.S. gasoline stocks and a tepid demand outlook.

Fracking Firms That Drove Oil Boom Struggle to Survive
Alison Sider, The Wall Street Journal

A wave of bankruptcies and closures is sweeping across the oil patch, with dozens of hydraulic-fracturing companies at risk, industry experts say.

Total Cuts 2017 Oil Output Target
Inti Landauro, The Wall Street Journal

French oil giant Total SA will pump less oil than expected in 2017 amid new cost cuts intended to protect its ability to pay investor dividends during a period of low oil prices, company officials said.

Wyoming Seeks More Funds to Clean Up Abandoned Wells
Dam Frosch, The Wall Street Journal

Wyoming is moving forward with sweeping new rules to double the money oil and gas companies must put aside before drilling new wells, a measure prompted by the large number of abandoned wells that litter the state.

Traders Spooked by El Nino Grind Winter Gas to a 16-Year Low
Naureen Malik and Brian K. Sullivan, Bloomberg News

Gas prices are tumbling as signs of El Nino mount and temperatures in Manhattan top 80 degrees Fahrenheit (27 Celsius) in late September. Gas for January delivery, when prices typically peak with winter heating demand, is heading into winter at a 16-year low.

Walker to call Alaska Legislature for special session on gas pipeline
Nathaniel Herz, Alaska Dispatch News

Alaska — along with three oil producers and a pipeline company — is in the process of developing a huge gas pipeline project from the North Slope. A special session this fall to address specific aspects of the project, like property taxes, has been under discussion for months.

Utilities & Infrastructure

3 Midwest utilities set up competitive transmission developers
Robert Walton, Utility Dive

Three new competitive transmission companies have been established by established midwestern utilities to take advantage of new power line building opportunities in organized markets. The Federal Energy Regulatory Commission this month conditionally accepted rate proposals and other protocols for three competitive transmission developers: Midwest Power Transmission Arkansas, ATX Southwest and Kanstar Transmission.

Renewables

Total Plans $500 Million Annual Investment in Renewable Energy
Javier Blas, Bloomberg News

Total SA plans to invest $500 million a year in renewable energy, a step by Europe's second-largest oil and gas company to expand in biofuels and solar. The French company said in a presentation to investors it wanted to take "advantage of fast growing renewable market" to build a profitable business.

As solar cap looms, installers ask CA regulators for interim metering measures
Herman K. Trabish, Utility Dive

The California Public Utilities Commission (CPUC) Net Energy Metering 2.0 proceeding is required to create a new program to reward solar owners for the electricity their systems send to the grid by the end of the year, but a cap on rooftop solar installations could be reached before that new program is devised.

Younicos provides 1MW battery for OCI Solar Power Texas project
Tom Kenning, PV Tech

Battery-based energy storage integration and development company Younicos is to provide a 1MW turnkey battery system for a solar project in Texas from PV developer OCI Solar Power. This will be the first integrated grid-scale solar-plus-storage project to be deployed in the market covered by the Electric Reliability Council of Texas (ERCOT), which is the body responsible for operating the grid and managing the

deregulated market for three quarters of Texas.

Coal

EPA rules cloud future of Xcel's big Minnesota coal plant
Matt Sepic, Minnesota Public Radio News

Xcel Energy's Sherburne County Generating Station's coal furnaces are also the state's single largest source of carbon emissions, pumping out 20 million tons of CO2 every year from its stacks, according to the federal Environmental Protection Agency. Those emissions have put those furnaces at the center of a debate over climate change and economic growth in Minnesota.

Nuclear

When Radiation Isn't the Real Risk
George Johnson, The New York Times

No one has been killed or sickened by the radiation from the 2011 nuclear disaster at Fukushima — a point confirmed last month by the International Atomic Energy Agency. But about 1,600 people died from the stress of the evacuation — one that some scientists believe was not justified by the relatively moderate radiation levels at the Japanese nuclear plant.

Climate

Pope Francis, in Washington, Addresses Poverty and Climate
Peter Baker and Michael D. Shear, The New York Times

Pope Francis quietly but forcefully made his priorities clear during his first full day in the United States on Wednesday, urging in a pair of speeches a renewed emphasis on tackling global poverty, confronting climate change, caring for migrants and providing a welcoming church that is pastoral rather than doctrinaire.

Obama Takes on Climate Change: The Rolling Stone Interview
Jeff Goodell, Rolling Stone

"I don't want to get paralyzed by the magnitude of this thing. I'm a big believer that imagination can solve problems," says the president.

Big players in climate talks converge in the U.S. as new pledges are made
Lisa Friedman, E&E

At least a half-dozen key countries are expected this week to announce new greenhouse gas emissions targets that will make up the spine of the new accord that could be reached in Paris in December. Those plans — likely from India, Brazil, South Africa and a number of Latin American countries — are to be unveiled by the U.N. General Assembly opening in New York this weekend.

Washington state rules target greenhouse gases
Becky Kramer, The Spokesman-Review

Some of Washington's largest polluters will have to cut back greenhouse emissions under new rules state officials are developing. The rules would target about 35 industrial facilities jointly responsible for 60 percent of the heat-trapping gases produced in Washington.

A Message from the American Coalition for Clean Coal Electricity:

Supporting energy policies that raise prices on consumers is a political loser. Thirty-six Members of Congress lost their seats after voting for the highly unpopular 2009 cap and trade legislation. Now cap and trade is back in the form of President Obama's costly and illegal carbon plan. Find out what history holds for supporters of costly carbon policies like the president's plan.

Opinions, Editorials & Perspectives

Why I Oppose Keystone XL
Hillary Clinton, Medium

When I was secretary of state, the department began reviewing an application to build a pipeline that would bring Canadian oil sands crude across the border, run more than a thousand miles through the American heartland, and terminate in Nebraska—Keystone XL. As the secretary who initiated the review, I refrained from commenting on the pipeline after I left the federal government. I didn't want to get ahead of President Obama while the process was still underway—because the decision was and is his to make.

One step forward, two steps back on carbon emissions
Brent Erickson, The Hill

There are troubling inconsistencies over at EPA. EPA acknowledges that Congress in 2007 set aggressive standards for renewable fuel use in order to displace oil and thereby reduce greenhouse gas emissions in the transportation sector. Nevertheless, the agency is proposing to allow oil refiners to hold biofuel use below 10 percent of the transportation fuel mix for the foreseeable future and to completely rewrite the volumes set by Congress.

Are methane cuts worth pain? (A point-counterpoint)
Jim Marston, The Dallas Morning News

According to the EPA, compliance with new methane rules is expected to cost the industry up to $420 million a year — even as the industry fights through historic lows in oil and gas prices. Are the new regulations worth the pain they'll cause the industry, and by extension Texas, which relies on the industry for economic growth?

Green Illusions Fell an Auto CEO
Holman W. Jenkins Jr., The Wall Street Journal

Volkswagen bet its U.S. future on curing American drivers of their aversion to diesel.

What Was Volkswagen Thinking?
Editorial Board, The New York Times

It's incredible that anyone at VW imagined the company could get away with cheating on diesel emissions.

A Message from the American Coalition for Clean Coal Electricity:

President Obama's costly carbon plan is nothing more than a redo of his failed 2009 cap and trade legislation. This illegal plan is the most overreaching energy regulation in our nation's history and a political loser for any public official that supports it. Cap and trade advocates paid for their support with their seats in 2010. See what's in store for staunch supporters of the president's carbon plan this time around.

Research Reports, Issue Briefs & Case Studies

Economic impacts of carbon dioxide and methane released from thawing permafrost
Chris Hope and Kevin Schaefer, Nature Climate Change

The Arctic is warming roughly twice as fast as the global average. If greenhouse gas emissions continue to increase at current rates, this warming will lead to the widespread thawing of permafrost and the release of hundreds of billions of tonnes of CO2 and billions of tonnes of CH4 into the atmosphere. So far there have been no estimates of the possible extra economic impacts from permafrost emissions of CO2 and CH4… The extra impacts of the permafrost CO2 and CH4 are sufficiently high to justify urgent action to minimize the scale of the release.

Subject: Morning Consult Energy, Presented by the American Coalition for Clean Coal Electricity: Pope Expected to Call for Climate Change Action in Congressional Address; Volkswagen CEO Resigns

By Colleen Leahy

Today's Washington Brief

- Pope Francis will address a joint session of Congress today, and he's expected to issue a strong call for action on climate change that may fall on some deaf ears with the House slated to debate legislation this afternoon that would bar federal agencies from considering the "social cost of carbon" in environmental reviews and permitting decisions. (National Journal)

- The pontiff spent much of his White House speech yesterday addressing climate change, voicing support for President Obama's Clean Power Plan. (The New York Times)

- The greater sage grouse won't be included on the endangered species list, but the Bureau of Land Management and the U.S. Forest Service have plans to essentially block oil and gas development across tens of millions of acres of the bird's habitat. Republicans say that will have the same effect as listing the bird. (Morning Consult)

Today's Business Brief

- Volkswagen Chief Executive Officer Martin Winterkorn resigned amid the German automaker's emissions-falsification scandal. (CNN)

- French multinational oil and gas company Total SA said it would invest $500 million annually in renewables. (Bloomberg News)

- As companies like Tesla drive up the demand for cobalt, a chemical element used in batteries, mining companies are racing to become cobalt's top producer. Eurasian Resources Group is leading that charge with a $2.2 billion mining project in the Democratic Republic of Congo. (Bloomberg News)

General

After Pope's Speech, House Turns to Bill That Bars Tallying "Social Cost" of Carbon
Ben Geman, National Journal

Con-gress will wel-come Pope Fran-cis with open arms Thursday, but the hours after his speech will likely bring fresh evid-ence that his calls for cli-mate-change ac-tion are un-likely to al-ter House GOP policy goals.

Volkswagen CEO quits over 'grave crisis'
Mark Thompson and Chris Liakos, CNN

Volkswagen chief executive Martin Winterkorn resigned Wednesday as a growing scandal over falsified emissions tests rocked the world's biggest carmaker.

Republicans, Environmentalists Grouse Over Protection Plans
Reid Wilson, Morning Consult

After more than 15 years of internal debate and court fights, the Interior Department said Tuesday it will not include the greater sage grouse on the endangered species list. Instead, the agency said BLM and the U.S. Forest Service would finalize land-

use plans that would help conserve tens of millions of acres of sage grouse habitat, effectively locking those lands off from development.

Senate Dems see energy bill as catnip for voters
Jean Chemnick and Hannah Northey, E&E

Senate Democrats who unveiled a sweeping energy bill yesterday are hoping their long list of clean power provisions attracts voters next fall. Combining clean energy and jobs is "an electric combination that I believe is going to take the country by storm, that I believe will be a major issue in the 2016 campaign," Sen. Chuck Schumer (D-N.Y.) said as the bill was unveiled on Capitol Hill yesterday.

Tesla Battery Push Spurs ENRC Owner to Target Cobalt Mining
Yuliya Fedorinova, Bloomberg News

Eurasian Resources Group plans to use a $2.2 billion project in the Democratic Republic of Congo to become the world's top cobalt producer and tap growing demand for batteries from companies including Tesla Motors Inc.

EPA announces $1.2 million in new funds to clean up contaminated sites in Maine
Gillian Graham, Portland Press Herald

The Environmental Protection Agency on Wednesday announced grants totaling more than $4 million to clean up contaminated industrial sites across New England. The $4.3 million in supplemental funds will go to a variety of so-called "brownfield" sites across the region, including $1.2 million for cleanup and redevelopment projects in Maine.

Schumer Stakes Out Budget Positions for Democrats
Will Dobbs-Allsopp, Morning Consult

Senate Majority Leader Mitch McConnell (R-Ky.) on Tuesday took the first step in trying to avert a shutdown at the end of the month, when appropriations for the current fiscal year are set to expire, by introducing a short-term funding bill that would keep the government open through Dec. 11. But even before McConnell introduced the continuing resolution, Sen. Chuck Schumer (D-N.Y.) and fellow Senate Democrats were already looking past the immediate government funding debate to stake out positions on spending and budget priorities for the oncoming clash later this fall.

U.S. Stock-Index Futures Decline Ahead of Yellen's Speech
Sofia Horta E Costa, Bloomberg News

Uncertainty over the Federal Reserve's stimulus policy prevailed among investors, sending U.S. stock-index futures lower, with the Standard & Poor's 500 Index at its

lowest level in almost three weeks. S&P 500 E-mini contracts expiring in December slipped 1 percent to 1,909 at 7:19 a.m. in New York, after swinging between gains and losses. The equity gauge fell for the fourth time in five days yesterday as a rout in crude prices weighed on commodity stocks. Dow Jones Industrial Average futures dropped 142 points, also 0.9 percent to 16,045 today.

Oil & Natural Gas

Oil rebounds near $48 after sharp fall

Hi Chris,

My name is Brad Keelor and I work on the Science and Innovation team at the British Embassy. We facilitate research collaboration in all disciplines. I have Phil Blythe, the Chief Scientist at the UK Department for Transport, and Miles Elsden, his deputy, coming to town next week for a conference. They're doing side meetings on Monday, and I'm hoping you're available to meet! They'd like to talk about your office and its role generally, and more specifically, they'd like to talk about VW, I think. They're available in the middle of the day if that works for you. WE'll be wrapping up a meeting at the Embassy at about 12, and they need to be at DOT on NJ Ave at 3, but can meet anytime in between (including for lunch if that works for you). Let me know what you think. Hope to talk to you soon!

From: Albus, Christoph
Sent: Thur 9/24/2015 12:51:00 PM
Subject: WG: EPA charges against VW -- Telephone Call with EPA on September 24 CONFIRMED

Dear Anna

Some additional information:

Mr. Zielke is Head of Directorate LA2 (Road Traffic and Transport). This directorate is also responsible for the requirements of approval and registration of vehicles, as well as for market surveillance issues.

Please inform me in case you need some more information in advance of the phone call.

Best Regards

Christoph

Betreff: AW: EPA charges against VW -- Telephone Call with EPA on September 24 CONFIRMED

Dear Anna

I will send you soon more detailed information about Mr. Zielke. He is my boss and is deeply involved in the work of the task force group, lead by state secretary Odenwald.

Currently our plan is, that the following persons will attend from our side to the phone conference:

Mr. Zielke will phone with Mr. Grundler

Mr. Zinke, president of our type approval agency (KBA) will also attend, as well as my colleague

Mr. Redmann and myself.

Best Regards

Christoph

Betreff: Re: EPA charges against VW -- Telephone Call with EPA on September 24 CONFIRMED

Christoph, thank you for informing us that Mr. Odenwald will not be available but we appreciate your confirming the call with Director Zielke on **Thursday, September 24th at 11:00 a.m.** Washington time. Can you please provide additional information on Director Zielke's position in the Ministry?

We can use the following conference lines:

From Germany (toll free): 08001818637

From the U.S. (toll free) 1-866-299-3188

Conference Code: **Non-Responsive**

I also am copying colleagues at the U.S. Embassy in Berlin so that they are aware of the call and can participate if schedules permit.

Best regards,

Anna

Dear Ms. Phillips,

Unfortunately state secretary Mr. Odenwald will not be available for a call tomorrow. On behalf of him, Director Zielke from the German Ministry for Transport and Digital Infrastructure would like to phone with Director Grundler tomorrow, 11:00 a.m. Washington time (as proposed by you). Please provide me with the contact information.

Best Regards

Christoph Albus

Betreff: Re: EPA charges against VW -- Telephone Call with EPA on September 24

Dear Stephan,

Due to a recent change in Mr. Grundler's schedule, he will no longer be available for a call with Mr. Odenwald on Tuesday, September 29th as we originally offered. As I'm sure you can imagine, this issue is putting tremendous pressure on his schedule which is subject to constant changes.

Mr. Grundler is still available for a call tomorrow (Thursday, September 24th) at 11:00 a.m Washington time but I'm afraid that is the only near-term option available at this point.

Please let us know as soon as possible whether it will be possible to arrange the call tomorrow so we can finalize the logistics.

Also FYI, we have received a separate information request on this issue from an expert within the Federal Ministry of Transportation. We are planning to recommend that they coordinate internally so that there is a single channel of communication with EPA to increase efficiency and to avoid confusion and potential misinformation. I will copy you and Steffen directly on our response and would appreciate your help in facilitating

coordination on the German side.

Many thanks...

Anna

Subject: EPA charges against VW

Dear Anna,

Good seeing you this morning. As briefly discussed, here are our questions regarding the Volkswagen law suit:

1. What is the judicial/legal process that will now follow (and how is the interplay between EPA and DoJ)?

2. Apart from a federal law suit, is there a possibility that Volkswagen will also face further court action by individual states (or even class action litigation)?

3. We understand the clean air act is the basis for EPA's action. Could you provide us with an overview of similar actions against car makers over the last years which were based on violations of the clean air act?

Many thanks for your help in this time sensitive matter.

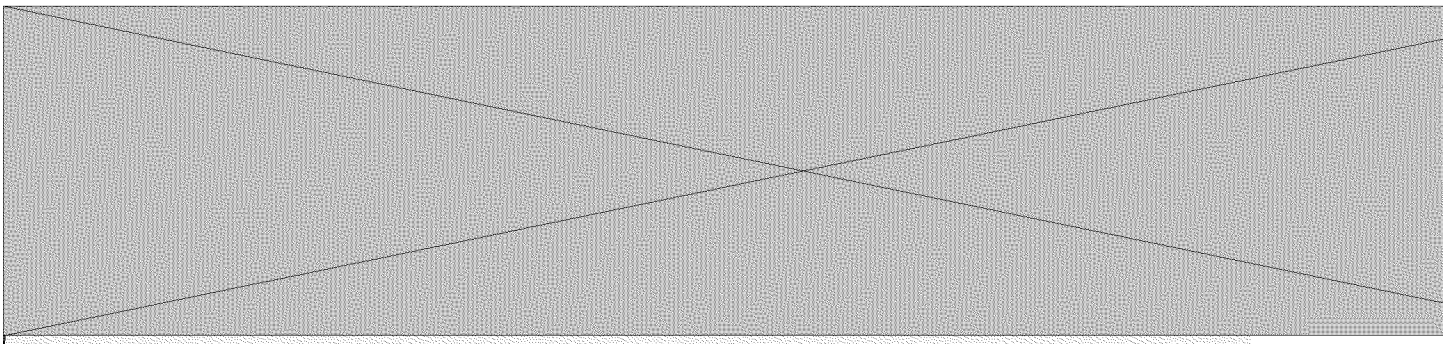
Subject: Plan your trip

If you are having trouble viewing this email, click here to display it in your web browser



What's special every day at Automotive Testing Expo North America?

Free-to-attend - register now! CLICK HERE!

Tuesday October 20 highlights:

- Show opens at 9am until 5pm.
- Free entry!
- Over 300 exhibits displaying the very latest products that are all improving vehicle reliability, durability, safety and quality.

Among the new products to see are…

- New portable airflow meter
  Exhibitor Tescor is traveling to Novi to showcase it recently developed portable AFTB 200-PR model airflow meter. Uniquely constructed with easily interchangeable sections, the unit can be field-converted into a blow-through configuration from the standard draw-through arrangement when testing for air leakage.
  Automotive Testing Expo North America 2015 stand: 1014
- Cutting-edge test chamber control software
  Making the journey all the way from Italy, Angelantoni Test Technologies (ATT) will showcase MyKratos, an app that allows users to manage, control and monitor the company's new Discovery My T & RH environmental test chambers, from any place at any time, using a mobile or desktop device. As visitors to the show will discover, all that is required to use the app is a wi-fi or Ethernet connection, or even a GPRS/UMTS connection.
  Automotive Testing Expo North America stand: 2023

Open Technology Forum highlights of this day include:

- S&R verification on system level using shaker table and CAE - *Torgny Ljungberg, attribute leader, Volvo Car Group, Sweden*
- The H in NVH - *Reino Eskelinen, consultant - vehicle development, Reino Race Consulting, Germany*
- Real-world emissions: a case study of 1,000 tests - *Nick Molden, founder and CEO, Emissions Analytics, UK*

Wednesday October 21 highlights:

• Show opens at 9am until 5pm.

• **Free to attend, all-welcome drinks party from 5pm to 6.30pm within the exhibition hall**

Among the new products to see are…

- New mobile high-flow diesel systems
  Re-Sol will use this year's show to highlight its new line of mobile high-flow diesel systems for heavy-duty applications. The RS-481 system in particular has been designed to supply diesel and biodiesel fuels with a flow rate of up to 700kg/h. Two electrical heaters supply preheating and also engine supply heating, while a Coriolis flow meter measures fuel consumption.
  Automotive Testing Expo North America 2015 stand: 11055
- Non-destructive testing experts
  Fraunhofer EZRT/IZFP (Fraunhofer X-Ray Technology Development Center), in Saarbrücken, Germany, will have experts on hand to share its expertise and discuss more about its R&D in non-destructive testing (NDT) along the entire materials value chain. The institutes perform R&D for customers in the field of x-ray sensors, radioscopic and optical imaging and inspection, industrial computed tomography, image processing, optical inspection techniques and additional technologies for NDT.
  Automotive Testing Expo North America 2015 stand: 1034

Open Technology Forum highlights of this day include:

- Uploading in-vehicle data to the cloud - *Dr Juan Pimentel, professor, Kettering University, USA*
- Onboard diagnostic testing from the vehicle and tool sides - *Robert Gruszczynski, OBD communication expert, Volkswagen Group of America Inc*
- Driver-in-the-loop simulation for autonomous vehicle developments - *Phil Morse, technical liaison, Ansible Motion Ltd, USA*

Thursday October 22 highlights:

• Show opens from 9am to 3pm.

Among the new products to see are…

- Superior speed sensor
  On display at Racelogic's booth will be the latest VBOX speed sensor, featuring twin antennas as in the VBOX 3i SL, providing extremely accurate body heading and slip angle measurement. In the field of vehicle dynamics, the combination of fast GPS with an inertial measurement unit (IMU) enables consistent and high-quality testing.
  Automotive Tesing Expo North America 2015 stand: 6016
- Lightweight robots for ADAS development
  Make sure you visit AB Dynamics' booth to discover the latest robotic test systems designed for development of advanced driver assistance systems (ADAS), which involves interaction between multiple vehicles and/or pedestrians and cyclists. The company's lightweight SR15 Steering Robot and the Combined Brake and Accelerator Robot (CBAR) synchronize accurately the position of a test vehicle and the soft target.
  Automotive Testing Expo North America 2015 stand: 6006

Open Technology Forum highlights of this day include:

- Applying real-world data to a research test program - *Hans Hauschild, senior research engineer, Medical College of Wisconsin, USA*
- Adapting industrial robots to simulate human interaction and durability testing - *Terry O'Bannon, chief scientist, OBannon Technologies, USA*

Subject: RE: Volkswagen should suffer the consequences of its cheating - The Washington Post

That closing paragraph is ridiculously conclusory and provides a hollowly specious argument. While I do strongly believe we can always do better and must learn from this episode, the Post's argument seems to be the Agency should find problems BEFORE they are raised and even one cheater representing less than 0.5% of the vehicle market is one too many.

The only way for EPA to accomplish what the Post appears to think is appropriate coverage is to drive all 16 odd million cars produced each year accumulating 150,000 miles on each vehicle and verifying throughout that time they are compliant. Once we have completed this 100 percent inspection program so nothing can fall through the cracks unknown - we can then turn those vehicles over to consumers. The cost and burden of that much oversight to root out the less than 0.5% of vehicles is not the value proposition the American public deserves from us. This is silly.

WaPo's conclusion:
Meanwhile, the EPA also deserves blame. The agency must explain why it took so long to gather evidence and shut down VW's cheating. It admitted that it began closely scrutinizing the company's diesel cars only after a West Virginia University study found emissions anomalies. That's unacceptable.

Fuel quality	• Gasoline: 30 ppm sulfur average / 80 max (2006); 10 ppm average / 80 max (2017) • Diesel: 15 ppm sulfur max (2007)	• Gasoline & diesel: 50 ppm sulfur max (2005) • Gasoline & diesel: 10 ppm sulfur max (2009)
Test cycle	Federal Test Procedures + Supplemental Cycles: • FTP-75 (city cycle, includes cold start) • US06 (high speed) • SC03 (air conditioning) • HWFET (highway cycle, fuel economy only)	New European Drive Cycle: • NEDC (city and extra urban, includes cold start) World-Harmonized Light-Duty Vehicle Test Procedure: • WLTP (cold start, low, medium, high and aggressive driving in a single cycle) • Expected implementation in 2017
Coverage	Emissions: • Tier 2 standards cover all vehicles up to 3,855 kg GVWR and passenger vehicles up to 4,535 • LEV II and III and Tier 3 extend coverage to all complete vehicles up to 6,350 kg GVWR GHG: • Light-duty standards cover all LDVs (up to 3855 kg) and MDPVs (up to 4535kg) • Heavy-duty standards (all other on-road vehicles, including all trucks above 3855 kg)	Emissions: • Limit values set for passenger cars & light commercial vehicles by vehicle class/weight up to 2610 kg (RM) CO_2: • Passenger car standards apply to vehicles designed for the carriage of passengers (up to 3.5 tonnes GVWR) • Light commercial vehicle standards include all light trucks with RM up to 2610 kg in the N1 category (up to 3.5 tonnes GVWR)
Timeframe	Emissions: • US Tier 2 (phase in 2004-2009), Tier 3 (phase in 2017-2025) • California LEV II (phase in 2004-2010), LEV III (phase in 2015-2028) GHG: • Light-duty standards include 2012-2016 standards and 2017-2025 standards	Emissions: • Euro 4 (2005 for new vehicle type approval, 2006 all) • Euro 5a (2009 new, 2011 all); 5b (2011 new, 2013 all) • Euro 6 (2014 new, 2015 all); Euro 6c adds RDE (~2017) CO_2: • Current standards apply for the 2015 model year. 2020 standards are fully phased in for the 2021 model year and apply for all years beyond, until replaced.

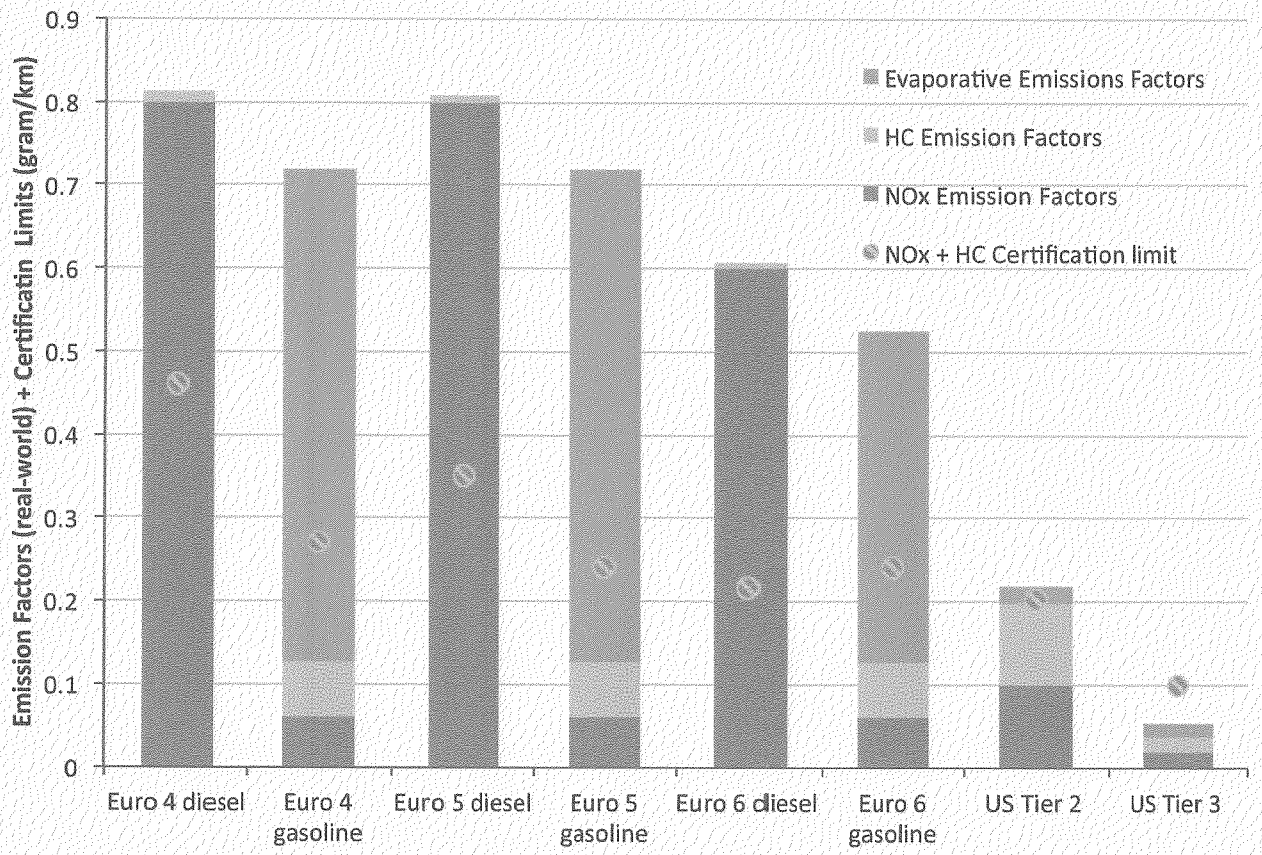
2017-FFP_026247
06/20/2017
VW FOIA, EPA

Overview continued

	US & California	European Union
Pollutants	Emissions: • NO_x + NMOG and CO (bin certification, fleet averaging) • HCHO (limit value) • PM mass (limit values, phased in) GHG: • CO_2 (fleet average) • CH_4, N_2O (limit values) • F-gases (credits available)	Emissions: • NO_x, HC, NO_x+HC (diesels), PM and PN (limit values per vehicle category) CO_2: • CO_2 (fleet average)
Design	Emissions: • All passenger vehicles and vehicles under 3,856 kg GVWR certify to a single set of bins, with a fleet average requirements • Different bins for medium-duty cargo vehicles (3,856 – 6,350 kg GVWR) • Standards phase in over time, as fleets are required to meet lower average emissions and/or higher-emission bins are eliminated GHG: • Annual, footprint-based standards, increasing in stringency each year. • Banking of credits and debits for annual targets. • Credits for off-cycle emissions, hybrid trucks, F-gases and air conditioning, and electric vehicles.	Emissions: • Different maximum limit values set for diesel and gasoline • Values stay stable until for multiple years, until new standards are introduced CO_2: • Single year, mass-based standard, applying to an increasing percentage of the fleet in preceding years. • Super credits (for vehicles with 50 g/km or less CO2 emissions) and eco-innovation credits (up to 7 g/km).
Durability (emissions)	• 193,000 km or 10 years (Tier 2/LEV II) • 240,000 km or 15 years (Tier 3/LEV III)	• 160,000 km or 5 years, whichever comes first

2017-FFP_026248
06/20/2017
VW FOIA, EPA

US and European standards are not equivalent



- Very little change from Euro 3 to 6 in exhaust emissions. Evaporative emissions go down for Euro 6 gasoline vehicles.
- Diesel emissions might decline as WLTC and Real Driving Emissions (RDE) are incorporated into Euro 6.
- Different test cycle complicate comparison: NEDC is a little stronger for gasoline vehicles (cold start is more important) but weaker for diesels (higher loads are more important). WLTP is more similar to FTP.
- US Tier 2 and 3 standards are fleet average standards, whereas Euro 6 is based on maximum limits. Current NOM 042 standards also set maximum value limits, which do not provide incentive to introduce cleaner models.

Argentina[m]	613,848	Euro 5	Euro V	150	30 (10) [2016]
Total G-20	**80,063,947**				
Total World	**88,164,642**				
G-20 Share	**90.8%**				

Euro-equivalent[n]

No standard	Euro 2/II	Euro 3/III	Euro 4/IV	Euro 5/V	Euro 6/VI	Post Euro 6/VI

a Current standards are China 4/IV nationwide, while some regions, such as Beijing, Shanghai, and Guangdong province, have adopted China 5/V and 10 ppm sulfur fuel. Standards that have been adopted but not yet implemented are indicated with the first implementation year in brackets, such as China gasoline 10 ppm sulfur (expected implementation in 2018).

b PNLTES standing for Japan's Post-New Long-Term Emission Standard (2009) is the current emission standard for the country's heavy-duty and light-duty vehicles. Japan will implement a new 0.4 g/kWh NO_x standard for HDVs in 2016.

c PROCONVE L-6 (2013) is the current light-duty emission standard; PROCONVE P-7 (2012) is the current heavy-duty emission standard; PROCONVE stands for "Programa de Controle da Poluição do Ar por Veículos Automotores" (The motor vehicle emission control program in Brazil)

d Values in parentheses indicate higher-quality fuel is available sub-nationally, but not required nationwide.

e As of April 2014, Bharat IV standards were in effect in 33 cities including the national capital region; a nationwide implementation date has yet to be formally adopted.

f Canada issued a proposal to harmonize with the US Tier 3 regulation; however formal adoption is pending.

g Canada has proposed 10 ppm for gasoline sulfur standard.

h Indonesia's average sulfur content of diesel fuel in market is 3,500 ppm, though Euro II is implemented and 500 ppm diesel fuel is available in a few major cities; a move towards Euro 4 adoption is in progress, which will hopefully come true in 2016; Indonesia's national petroleum company is also moving to revitalize their refineries to be able to produce at least Euro 4 fuel.

j On Australia's regulation see TransportPolicy.net, http://transportpolicy.net/index.php?title=Australia:_Fuels:_Diesel_and_Gasoline

k As of January 2015, Saudi Arabia's diesel fuel standards are being updated to require Euro 5 sulfur levels in all the kingdom's refineries (http://www.unep.org/transport/new/pcfv).

l Information for South Africa from 1) http://www.unep.org/Transport/new/PCFV/pdf/10gpm/10GPM_AfricaRegionalUpdates.pdf and 2) Delphi Automotive, *Worldwide Emissions Standards: Passenger Cars and Light Duty Vehicles.*

m Emission and sulfur standards for Argentina, Turkey, Saudi Arabia, Mexico, South Africa and Indonesia are from http://www.unep.org/transport/new/pcfv); Argentina has Euro 5/V in 2014 for new models, and will adopt Euro 5/V for all models

n Euro-equivalent emission standards based on limit values

OITA (Anna and maybe Mark) will be joining by phone. Also a US Embassy-Berlin staff person will listen in as well.

Also here is a little background that we just received from the Embassy:

Mr. Zielke is Head of Directorate (Road Traffic and Transport) - Ministry of Transport. This directorate is also responsible for the requirements of approval and registration of vehicles, as well as for market surveillance issues. Mr. Zinke, president of the type approval agency (KBA) will also attend.

I have attached a few quick charts that I use that ICCT developed. The charts outline the program differences pretty well. As you read through these charts be reminded that the EU test cycle is very different from ours. Basically the EU cycle doesn't even include aggressive driving or high load conditions so that clearly makes any direct comparisons very difficult.

Pat - please print out the attachment for Chris asap.

Subject: 2014 Volt (non-blended) and Ford Fusion PHEV (blended) and Panamera (blended) and Cayenne non-blended) Labels attached
2014 volt label image-from GM-6-10-2013.pdf
2014 Porsche Panamera PHEV FE Label-from Ross-3-31-2014.pdf
Cayenne S e-Hybrid Monroney Label 2015-from Ross-10-15-2014.pdf
2015 Fusion Energi (PHEV) label-from Ford-7-7-2014.pdf

Richard,

Here are some examples for you.

Note that the Fusion/C-Max PHEVs are "blended" but the gasoline engine doesn't come on during UDDS & hwy tests----so the label shows 0.0 kw-hr/100 mi during charge depleting operation.

Dave

EPA DOT Fuel Economy and Environment

Plug-In Hybrid Vehicle Electricity-Gasoline

Fuel Economy Midsize Cars range from 13 to 88 MPG. The best vehicle rates 119 MPGe.

Electricity + Gasoline
Charge Time: 2.5 hours (240V)
88 MPGe combined city/highway
0.0 gallons per 100 miles
37 kW-hrs per 100 miles

Gasoline Only
38 MPG combined city/highway
2.6 gallons per 100 miles

Driving Range
Electricity + Gasoline | Gasoline only
0 5 10 15 20 25 550
All Electric Range = 0 to 19 miles
20 miles

You save **$5,750** in fuel costs over 5 years compared to the average new vehicle.

Annual fuel cost **$1,050**

Fuel Economy & Greenhouse Gas Rating (tailpipe only) 10 (1 – 10 Best)

Smog Rating (tailpipe only) 7 (1 – 10 Best)

This vehicle emits 129 grams CO_2 per mile. The best emits 0 grams per mile (tailpipe only). Producing and distributing fuel and electricity also create emissions; learn more at fueleconomy.gov.

Actual results will vary for many reasons, including driving conditions and how you drive and maintain your vehicle. The average new vehicle gets 24 MPG and costs $11,000 to fuel over 5 years. Cost estimates are based on 15,000 miles per year at $3.50 per gallon and $0.12 per kW-hr. This is a dual fueled automobile. MPGe is miles per gasoline gallon equivalent. Vehicle emissions are a significant cause of climate change and smog.

Subject: VW and comp time

Rosemarie- as you know, Meetu and Greg Orehowsky have been working diligently on the VW matter for the last 2 weeks. The time crunch has been substantial and necessitates that they do some work in addition to/outside of their normal work hours. I am not certain if Phill raised it with you prior to his departure, so I want to bring it up now and confirm that AED managers can approve comp time, as necessary, for Meetu Kaul and Greg Orehowsky in order for VW work to be accomplished within the time constraints that may arise. We will, of course, be aware of the budgetary concerns and only approve the comp time when it is necessary to meet a specific deadline/time sensitive requirement.

Please let me know if you have any questions/concerns.

Thanks,
Jacqueline

I have attached a few quick charts that I use that ICCT developed. The charts outline the program differences pretty well. As you read through these charts be reminded that the EU test cycle is very different from ours. Basically the EU cycle doesn't even include aggressive driving or high load conditions so that clearly makes any direct comparisons very difficult.

Pat - please print out the attachment for Chris asap.

CLIMATE:

Pope praises Obama emissions rule, urges strong U.S. action

Jean Chemnick, E&E reporter

Published: Wednesday, September 23, 2015

Pope Francis endorsed U.S. EPA's Clean Power Plan today in a White House Rose Garden appearance with President Obama.

"Mr. President, I find it encouraging that you are proposing an initiative for reducing air pollution," the leader of the Roman Catholic Church said.

The pope then urged "all men and women of good will in this great nation" to consider the impact of global warming for future generations of Americans and "millions of people living under a system that has overlooked them."

"It seems clear to me also that climate change is a problem which can no longer be left to our future generation," Francis said. "When it comes to the care of our common home, we are living at a critical moment of history. We still have time to make the change needed to bring about a sustainable and integral development, for we know that things can change."

In his June encyclical on the environment, the pope cast climate change as a threat to the world's poor, who would suffer most from dangerous warming and scarcer resources because wealthier nations have benefited from the use of fossil fuels (*Greenwire*, June 18).

Francis has said this December's United Nations negotiations on climate change must yield an agreement on curbing heat-trapping emissions that also protects vulnerable people.

He called on Americans today to "support the efforts of the international community to protect the vulnerable in our world and to stimulate integral and inclusive models of development, so that our brothers and sisters everywhere may know the blessings of peace and prosperity which God wills for all his children."

Referencing a quote from the Rev. Martin Luther King Jr., he said, "We have defaulted on a promissory note, and now is the time to honor it."

Francis will appear tomorrow before a joint session of Congress in the House chamber, where Republicans have voted several times to defund U.S. participation in the U.N. Framework Convention on

Climate Change and to jettison funding for the United Nations' Green Climate Fund. Obama has promised $3 billion over four years for the fund, which will help poor countries cope with warming and reduce their own carbon emissions.

The developed world collectively has pledged to provide $100 billion a year in public and private funding for poor nations beginning in 2020 as part of the larger deal on emissions.

Providing that money and compensation for loss and damage from man-made warming are likely to be flashpoints during discussions between developed and developing nations at U.N. talks in Paris in December. Some environmental advocates say the United States should do more. And a coalition of faith groups this month called on the U.S. to pledge $5 billion a year in international climate aid between 2020 and 2025 (*Greenwire*, Sept. 10).

But that pledge would require the cooperation of Congress, and Republican lawmakers have said they plan to use the power of the purse to frustrate any international climate deal that might bind the United States. The Clean Power Plan for slashing emissions from the U.S. power sector is also a hot-button legislative issue this fall, and Republican leaders are preparing a bid to veto it using the Congressional Review Act.

Obama in his remarks welcoming Francis made a brief reference to climate change.

"You remind us that we have a sacred obligation to protect our planet, God's magnificent gift to us," he told the pope. "We support your call to all world leaders to support the communities most vulnerable to a changing climate."

Francis' remarks gave some hint of the issues he plans to address later in his visit, including immigration and family issues. He referred to himself as a son of immigrants -- his father moved to Argentina from Italy. And he noted that he will visit the World Meeting of Families in Philadelphia this weekend "to celebrate and support the institutions of marriage and family."

AIR POLLUTION:

Volkswagen chief steps down over emissions scandal

Sean Reilly, E&E reporter

Published: Wednesday, September 23, 2015

Martin Winterkorn, CEO of Volkswagen AG, announced his resignation this morning, saying the German automaker needs "a fresh start" in the midst of a spiraling emissions-testing scandal involving millions of its diesel-fueled cars.

"As CEO I accept responsibility for the irregularities that have been found in diesel engines and have therefore requested the supervisory board to agree on terminating my function as CEO of the Volkswagen Group," Winterkorn said in an online statement. "I am doing this in the interests of the company even though I am not aware of any wrongdoing on my part."

Winterkorn, 68, has been VW's chief executive since 2007. In a separate statement, the board's executive committee said recommendations for "new personnel" will be made Friday, adding that it would voluntarily file a complaint with German prosecutors. "In the view of the executive committee, criminal proceedings may be relevant due to the irregularities," the statement said. The committee said Winterkorn "had no knowledge of the manipulation of emissions data" and thanked him for his willingness to take responsibility.

Today's announcement comes five days after U.S. EPA and California state regulators accused Volkswagen of installing software in almost a half-million vehicles from model years 2009 to 2015 that applied full pollution controls when the vehicles were being tested but allowed nitrogen oxide emissions far above EPA standards under normal driving conditions (*Greenwire*, Sept. 18). Affected models include the Audi A3, Beetle, Golf, Jetta and Passat. Worldwide, some 11 million vehicles have been outfitted with the "defeat devices," Volkswagen officials said this week.

From Friday until yesterday, the share price of Volkswagen AG, the parent company of Volkswagen Group, dropped by about a third.

On Sunday, Winterkorn apologized for breaking customers' trust and said VW would fully cooperate with regulators (*Greenwire*, Sept. 21).

"The process of clarification and transparency must continue," he said in today's statement. "This is the only way to win back trust. I am convinced that the Volkswagen Group and its team will overcome this grave crisis."

CLIMATE:

Polar bear groupie tails pope, scores wave

Robin Bravender, E&E reporter

Published: Wednesday, September 23, 2015

When Pope Francis arrived at the White House this morning, he may have seen the man in the fluffy white polar bear costume holding a sign declaring, "The Pope Gives Me Climate Hope."

Frostpaw the polar bear, a creation of the Center for Biological Diversity, was stationed near 1600 Pennsylvania Ave. when the pope arrived ahead of his meeting with President Obama.

Frostpaw the polar bear is tracking Pope Francis around Washington, D.C. Photo courtesy of the Center for Biological Diversity.

"He actually waved to us," said Stephanie Kurose, a legal fellow at the environmental group who is traveling with Frostpaw today. The pope was waving to the crowd that had gathered to see him this morning, and "he may have seen us," Kurose said. "It's kind of hard to miss the polar bear."

The bear is making an appearance, Kurose said, "supporting the pope, who's been a great climate supporter and climate activist."

Frostpaw -- played today by volunteer Carl McMahon -- and his entourage will be following the pontiff during his three-day visit to Washington. The group plans to make an appearance at the parade near the White House and at St. Matthew's Cathedral later today. Tomorrow, CBD attorney Bill Snape is planning to don the bear costume outside the U.S. Capitol as the pope addresses Congress and will then attend a climate rally on the National Mall.

This isn't the first time Frostpaw has tried to get noticed by a world leader.

In late 2013, Snape as Frostpaw tracked Obama around Hawaii while the president was on vacation. There, Snape and other environmentalists sought to draw Obama's attention to their cause opposing the controversial Keystone XL pipeline.

After getting a tip that Obama was going golfing, Snape parked himself at a chain-link fence near the 18th hole. After waiting for two "painfully long, hot hours" for Obama to appear, Frostpaw got his attention. "Hey, polar bear," Obama said, to Snape's delight (*Greenwire*, Jan. 2, 2014).

CLIMATE:

Obama talks 'balance' on warming in *Rolling Stone* interview

Jean Chemnick, E&E reporter

Published: Wednesday, September 23, 2015

President Obama used an interview with *Rolling Stone* magazine published today to explain why support for some fossil fuels and nuclear development might square with his ardent belief in addressing climate change.

He told contributing editor Jeff Goodell during last month's trip to the Alaskan Arctic that a president is not free to shut down fossil fuels and nuclear development instantly, as some environmentalists have demanded.

"And regardless of how urgent I think the science is, if I howl at the moon without being able to build a political consensus behind me, it's not going to get done," he said. "And in fact, we end up potentially marginalizing supporters or people who recognize there's a need to act but also have some real interests at stake."

Obama gave his interview during a historic trip to the Arctic in which he charged that none of the mostly wealthy nations represented in the Arctic Council is moving fast enough to contain emissions that are threatening the north, and by extension the world (*Greenwire*, Sept. 1).

But environmentalists said at the time that Obama's message was undercut by his recent decision to allow Royal Dutch Shell PLC to drill for oil in the Chukchi Sea for the first time in 24 years. Some groups protested his trip, accusing the president of hypocrisy.

In his *Rolling Stone* interview, Obama defended support for some fossil fuels development as important to securing a durable response to climate change that would garner broad support. He noted that Alaskan villages that are threatened by warming sometimes have fossil fuels interests. Bans on drilling in very vulnerable areas must be offset with some development in less risky regions, he suggested, to ensure supply and economic development.

"And somebody who is not involved in politics may say, 'Well, the shortest line between two points is just a straight line; let's just go straight to it,'" he said. "Well, unfortunately, in a democracy, I may have to zig and zag occasionally, and take into account very real concerns and interests."

He compared his administration's approval of new nuclear power plants in the South -- also panned by some environmentalists -- with his slow reversal of the rule against gays serving openly in the military. More time was needed to shore up Pentagon support for an end to "don't ask, don't tell," he said.

"So there's always this balance," he said. He also said that he had no opportunity to help enact a carbon cap-and-trade bill during the first two years of his presidency, despite Democratic majorities in Congress, because Republican opposition made it impossible to overcome a filibuster.

Members like Sen. John McCain (R-Ariz.), his 2008 rival for the presidency, got "caught up in a feverish opposition to anything I proposed," he said, reversing their past support for a climate bill. "Which meant that getting the numbers that we needed was going to be too difficult."

The Arctic trip, like the pope's visit to the United States this week, was intended to build momentum

toward the round of high-stakes international climate talks later this year in Paris.

Obama said he had saved the 2009 United Nations talks in Copenhagen, Denmark -- which he called a "disorganized mess" -- by "strong-arming" large developing countries into participating constructively.

But he expressed hope that this year's talks would yield the kind of agreement on emissions the world needs.

"I believe that when we get to Paris at the end of this year, we're now in a position for the first time to have all countries recognize their responsibilities to tackle the problem, and to have a meaningful set of targets as well as the financing required to help poor countries adapt," he said.

Major developing emitters like China, India and Brazil have already come to the table, he noted, adding that this year's agreement need not lay out the final set of emissions-reduction commitments.

"I'm less concerned about the precise number, because let's stipulate right now, whatever various country targets are, it's still going to fall short of what the science requires," he said. "So a percent here or a percent there coming from various countries is not going to be a deal-breaker."

Advocates who track international climate issues say the commitments major emitting nations have floated ahead of this year's talks do not add up to what would be needed to keep warming to no more than 2 degrees Celsius above preindustrial levels -- the threshold that scientists say would trigger the worst effects of climate change. But Obama said this year's agreement would create an annual evaluation and increasing commitments in later years.

One unanswered question in the climate negotiations is whether an agreement will provide a mechanism for countries to revisit their emissions reduction commitments.

CAMPAIGN 2015:

Another Ky. ad takes whack at Democrat's Obama coal ties

Jennifer Yachnin, E&E reporter

Published: Wednesday, September 23, 2015

The ads just keep on coming in Kentucky, where a super PAC backing GOP gubernatorial nominee Matt Bevin today fired the latest salvo in the battle over which candidate is a better advocate for the state's coal industry.

The Fight for Kentucky super political action committee launched a two-minute video that touts Bevin's promises to support the coal industry and features clips of newscasters discussing the "war on coal," as Republicans commonly refer to President Obama's efforts to reduce carbon emissions.

The video is the latest in a series of ads from both major-party candidates in recent days, as Kentucky Attorney General Jack Conway (D) looks to paint himself as an opponent of U.S. EPA and Bevin works to tie Conway to the White House (*Greenwire*, Sept. 22).

Fight for Kentucky spokesman Matt Mackowiak said the new spot is a "low five-figure" buy that will focus on digital viewers in the state's eastern and western reaches.

The ad starts off with clips of various newscasters discussing the "war on coal" and the reduction in coal

mining jobs nationally, as well as often-used footage of Obama in a 2008 interview with the *San Francisco Chronicle* in which he promoted greenhouse gas regulations by asserting they would end the construction of new coal-fired power plants.

The spot then shifts to audio of Bevin as he states, "Coal is still the No. 1 producer of electricity in this country and in this state certainly.

"Never in the history of the world has there been more demand for coal than there is now. How is it that we're not participating in Kentucky?" Bevin continues. "So the idea that coal is dead is wrong. I disagree with that, and I will not just be a friend of coal, I will fight to ensure that we mine coal."

Bevin and Conway are competing in a three-way race along with independent candidate Drew Curtis for the right to replace term-limited Gov. Steve Beshear (D).

PEOPLE:

Trump, Moniz talk climate change and labs on Colbert show

Katherine Ling, E&E reporter

Published: Wednesday, September 23, 2015

Yes, his famous founding fathers-like hairdo is all real hair, Energy Secretary Ernest Moniz assured Stephen Colbert yesterday on "The Late Show," before launching into more serious topics.

Moniz also guaranteed that national laboratories can detect nuclear weapons activities months after any illicit activity, a key safeguard in the Obama administration's Iran agreement.

"There have been allusions to throwing drugs down the toilet," Moniz said, describing critics' complaints about the Iranians' ability to delay inspections for up to almost a month after they are requested.

"It doesn't work that way with nuclear material. First of all, we already have a history of catching this after six months, let alone 24 days. Secondly, we have done experiments in our laboratories, and it is really, really hard to clean up nuclear particles," he said to great applause.

During the show, Moniz also highlighted the groundbreaking work by fellow nuclear physicists, DOE and its national laboratories to maintain and reduce the U.S. nuclear weapons stockpile with no nuclear testing. That ultimately supports President Obama's goal for a future with no nuclear weapons, although it is "a ways off," he said.

The audience enthusiastically applauded ridding the world of nuclear weapons -- what Colbert called a "super pander" by Moniz -- while the Iran nuclear deal received very few claps at first.

"By the way, stopping a nuclear weapon got three people clapping," Colbert said to Moniz, explaining it was "great" because it meant "we are not that worried about it."

Colbert on the other hand failed to verify the authenticity of the hair of his first guest on the show last night, Republican presidential candidate Donald Trump, later saying he forgot to ask the billionaire -- who is quite sensitive about his famous coif -- about it.

Trump stuck to his script on illegal immigration and the power of money in politics during his appearance but did mistakenly attribute a comment he had made about climate change to the over-the-top

conservative pundit character that Colbert played on his previous show on Comedy Central, "The Colbert Report."

Colbert asked Trump which one of them had said the quote, "'It's freezing in New York. We need global warming!'" during a game called "Trump or Colbert."

"Well, I think it's you, but it is close to being me," Trump said.

"It's you," Colbert told Trump.

Trump did correctly attribute five of seven other quotes.

CAMPAIGN 2016:

Senate Dems see energy bill as catnip for voters

Jean Chemnick and Hannah Northey, E&E reporters

Published: Wednesday, September 23, 2015

Senate Democrats who unveiled a sweeping energy bill yesterday are hoping their long list of clean power provisions attracts voters next fall.

Combining clean energy and jobs is "an electric combination that I believe is going to take the country by storm, that I believe will be a major issue in the 2016 campaign," Sen. Chuck Schumer (D-N.Y.) said as the bill was unveiled on Capitol Hill yesterday. Schumer is slated to become the chamber's top Democrat after Senate Minority Leader Harry Reid (D-Nev.) retires at the end of this Congress.

The draft "American Energy Innovation Act," Schumer said, reflects the "wide gulf" between Democrats and Republicans on climate change and clean energy.

"This is going to be a huge issue in the 2016 campaign, with millennials and the whole electorate. It's going to help Democrats big-time," he said.

The draft measure sponsored by the Senate Energy and Natural Resources Committee's top Democrat, Sen. Maria Cantwell of Washington, with input from senior Democrats on the Finance and Environment & Public Works committees, is a list of provisions aimed at boosting natural gas use, renewable energy and efficiency without the pro-coal and oil provisions that would usually be required to garner Republican backing.

While the measure wouldn't cap emissions linked to climate change, the bill sets a goal of reducing greenhouse gas emissions by at least 2 percent per year through the use of "appropriate authorities and available technologies." The target tracks roughly with the White House's pledge that the United States will cut its emissions between 26 and 28 percent by 2025.

The measure also endorses the Obama administration's quest for a global agreement on warming -- an ambition Republican lawmakers are preparing to target in any way they can.

Although the draft language won't go far in a Republican-controlled Congress where next year's presidential election is already crimping the legislative agenda, sources say the measure does offer a marker for amendments that Democrats could offer should the Senate take up a comprehensive energy bill.

Sara Chieffo, vice president of government affairs for the League of Conservation Voters, said ideas about curbing emissions and boosting clean energy in the Senate package will likely be elevated in races across the country.

In fact, Chieffo said that's already happening in a Wisconsin race, where LCV joined with the Environmental Defense Action Fund to launch a television ad critical of Republican Sen. Ron Johnson, who is running against former Sen. Russ Feingold (D). The ad criticizes Johnson over his opposition to the Clean Power Plan and calling on the first-term lawmaker to back regulations aimed at reducing carbon pollution from existing power plants (*E&ENews PM*, Sept. 22).

Even Republicans opposed to the Democrat's energy bill acknowledged the language had a political bent.

Sen. John Barrasso (R-Wyo.) told reporters on Capitol Hill yesterday that the Cantwell draft seemed calculated to prop up former Secretary of State Hillary Clinton, the front-runner for her party's nomination. Barrasso noted that Clinton has said that President Obama's Climate Action Plan should be "a floor, not a ceiling."

Clinton, notably, came out yesterday in opposition to the proposed Keystone XL oil pipeline, a position that Sen. Bernie Sanders (I-Vt.) took long ago but that Obama has yet to weigh in on.

"So you have the Democrats today in the Senate, the party in the minority ... I think just doing part of the bidding for the presidential nominee for 2016, just based on what Hillary has said about energy and the president's climate initiative," Barrasso said.

'Political winds shifting'

Despite Republican opposition, green groups are seizing on the Democratic Senate bill as another sign that the politics of climate change are changing.

"We've been seeing momentum throughout this year, and I think this is another data point on that shift," Chieffo said. "You've also seen candidate and politicians alike move away from straight-up climate denial to 'I'm not a scientist, I don't know how much of a role we're playing.'"

Jeremy Symons, a senior adviser for Environmental Defense Fund Action, said that far from providing the Democratic contenders with a pro-active energy and climate platform, the Cantwell bill finally catches up to where they and most voters already are.

"Congress has been stuck on climate," Symons said, adding that "you can definitely see the political winds shifting."

Last week, 11 House Republicans signed on to a resolution ahead of Pope Francis' visit this week that seemed to endorse the science of man-made climate change and endorse some action on it. The wording was vague, but a resolution by Rep. Chris Gibson (R-N.Y.) deviated from the position that many GOP lawmakers have taken -- that virtually any federal policy explicitly tailored to address climate change would be harmful to the economy.

Rep. Raúl Grijalva (D-Ariz.) said on a call yesterday hosted by NextGen Climate that Democrats would put out a more aggressive resolution of their own after the pope's visit that called for higher targets on emissions reduction and renewable energy deployment.

And EDF's Symons said that even Congress' most strident opponents of U.S. EPA climate regulations seem to be moving the defeat of those regulations lower on their to-do list.

Senate Majority Leader Mitch McConnell (R-Ky.) is not pressing for a policy rider to stopgap funding legislation that would scuttle the Clean Power Plan, despite his past devotion to killing the utility carbon rule. McConnell is still expected to use the Congressional Review Act to challenge the rule once it is published in the *Federal Register*, but that strategy has virtually no chance of becoming law.

"The pressure point was always on the budget, and clearly they're getting advice that any kind of showdown over EPA doing its job is bad politics," Symons said. "If it was good politics, they'd be doing it."

Some proponents of climate action -- Energy and Natural Resources Chairwoman Lisa Murkowski (R-Alaska) among them -- have long held that energy policy is the best way to tackle climate change, and the Energy and Natural Resources Committee produced a bill in 2009 that pared efficiency and renewable energy incentives with greater access to fossil fuels development.

But Symons said those previous efforts weren't a good deal for the climate, because they didn't explicitly set a carbon reduction goal and because they often did as much for carbon-intensive sources as for clean energy.

"It was always one step forward, two steps back," he said.

AIR POLLUTION:

Sponsor of rule-curbing bill targets EPA ozone plan

Amanda Reilly, E&E reporter

Published: Wednesday, September 23, 2015

The sponsor of legislation meant to check the executive-branch rulemaking today used U.S. EPA's proposal to tighten the Clean Air Act standard for ozone to promote the bill.

Rep. Todd Young (R-Ind.) said the ozone proposal would hamstring manufacturing in his home state, citing industry estimates that a tighter standard would cost the U.S. economy as much as $140 billion a year.

"Hidden taxes in the form of regulations have to be made more transparent," Young said on a conference call organized by industry groups.

Young's bill -- the "Regulations From the Executive in Need of Scrutiny (REINS) Act" -- would require congressional approval for major agency rules. The House in July easily passed the act by a vote of 243-165 (*E&E Daily*, July 29).

But the measure stands little chance of becoming law given that it carries a veto threat by President Obama.

Young, a conservative Republican who is running for the Senate seat of retiring Sen. Dan Coats (R-Ind.), said EPA's proposal to tighten the ozone standard was an example of a regulation that should be reviewed by Congress.

He said he worried that EPA's proposal struck an "improper balance" that would help the environment and public health at the expense of the economy.

EPA proposed in November to lower the national ozone standard from 75 parts per billion -- set in 2008 during the George W. Bush administration -- to between 65 and 70 ppb based on a review of public health data. Areas found to be out of compliance with the new standard would have to put in place pollution control plans.

"I've got real concerns about the impact of these sorts of regulations on communities that are already in nonattainment ... specifically lower-income communities," Young said.

Another Indiana Republican, Rep. Jackie Walorski, also today called for the enactment of the REINS Act based on the ozone proposal, citing the need for a "balance" between the environment and the economy. Both Young and Walorski earlier this summer signed onto a letter in the House calling on EPA to retain the 75 ppb standard.

"I spend most of my days battling and struggling with the overregulation of the EPA in this district. That's where I spend most of my time. It's way, way, way heavy-handed," she said. Lowering the ozone standard "would be the nail in the coffin to job creation in the state of Indiana and lead to a complete spiral."

The lawmakers said nearly all of Indiana would be named out of attainment under a 65 ppb standard. Their comments came as industry and business groups launched a statewide ad campaign against a tighter ozone standard in the Hoosier state.

EPA is poised to release its final ozone limit by an Oct. 1 court-ordered deadline; the agency is reportedly leaning toward the upper end of its proposed range.

Public health and environmental groups have called on EPA to set an even lower limit of 60 ppb on the grounds that studies have linked ozone concentrations above that level with adverse health effects.

Today, the Sierra Club pushed back against industry estimates of how many counties would be out of compliance with a tighter ozone standard. The club said that, based on 2013-15 air quality data, only 100 counties across the nation would be in nonattainment under a 70 ppb standard. An additional 214 counties would be out of compliance with a 65 ppb standard.

EPA says most areas of the country would meet a tighter standard by 2025 based on other air quality regulations that are in place.

The American Petroleum Institute, on the other hand, has circulated a map based on 2011-13 data showing that nearly the entire country, including more than 90 percent of Indiana, would be out of compliance with a 65 ppb limit.

VEHICLES:

Sen. Nelson urges FTC to act on VW emissions scandal

Sean Reilly, E&E reporter

Published: Wednesday, September 23, 2015

The Federal Trade Commission should seek redress for Volkswagen and Audi customers who bought cars on the false assumption that they were "clean diesel" vehicles, the top Democrat on the Senate panel that oversees consumer protection policy said yesterday.

While U.S. EPA and the Justice Department are respectively exploring civil and criminal cases against the German automaker, the commission "also has an appropriate role in investigating the company's actions," Sen. Bill Nelson of Florida wrote in a letter to FTC Chairwoman Edith Ramirez.

Although the agency cannot seek fines under the section of the FTC Act that bars deceptive practices, "it could force Volkswagen to launch a comprehensive corrective marketing campaign that would cure the deception and inform consumers about their remedial options," Nelson said.

Commission spokesman Mitchell Katz acknowledged receipt of Nelson's letter but, citing agency policy, declined to say whether any investigation is planned or under way.

Since EPA officials accused Volkswagen last Friday of using sophisticated software to game emissions standards, the company has acknowledged that about 11 million diesel-powered vehicles worldwide have been outfitted with the "defeat devices" (*Greenwire*, Sept. 22).

Nelson is ranking member on the Senate Commerce, Science and Transportation Committee. While the panel is following the unfolding scandal "very carefully," Chairman John Thune (R-S.D.) told reporters yesterday, he noted that the Senate Environment and Public Works Committee has lead responsibility for emission issues.

"The good news, I guess, in this, if there's any, is that they're saying it's not a safety issue," Thune said. "But it's obviously something that there's going to have to be accountability for, and people are going to have to be held accountable."

Although the EPW Committee currently has no plans to wade into the controversy, a spokeswoman said, the House Energy and Commerce Subcommittee on Oversight and Investigations will hold a hearing in the next few weeks, leaders announced Monday (*E&E Daily*, Sept. 22).

Reporter Geof Koss contributed.

RAIL:

Dems blast lawmaker for taking credit for Amtrak contract

Published: Wednesday, September 23, 2015

Officials from the Democratic Congressional Campaign Committee have decried a move by Rep. Tom Reed (R-N.Y.) to claim credit for a new Amtrak contract bringing 400 jobs to Alstom Transportation in Hornell, N.Y.

The officials referenced Reed's June vote for a transportation bill that would have cut Amtrak's funding by $242 million.

"When it comes to Amtrak funding, Congressman Reed is talking out of both sides of his mouth," DCCC official Meredith Kelly said. "First, he votes to cut millions of dollars from Amtrak's annual budget, and then goes home, applauds and takes credit for a massive Amtrak investment in his district."

Reed was dismissive of the attack, despite the fact that he was not invited to join Sen. Charles Schumer (D-N.Y.) at the announcement event.

"I think that's a lot of political theater," he said. "We've stood firm with this investment in our rail systems" (James Post, Corning, [N.Y.] *Leader*, Sept. 22). **-- BTP**

COAL:

Mine numbers drop to record lows -- EIA

Manuel Quiñones, E&E reporter

Published: Wednesday, September 23, 2015

The year 2013 saw the lowest number of active coal mines on record, the U.S. Energy Information Administration said in a brief report released this morning.

EIA also said the number of new and reactivated coal mines that began production in 2013 dropped to 103, the lowest level in a decade. Companies closed or idled 271 sites the same year.

EIA said the 2013 total of new or reactivated mines was 14 percent lower than 2012 and 397 fewer sites compared with 2008, when the agency said coal production was high.

"Although preliminary 2014 data on coal production from the Mine Safety and Health Administration indicate a slight increase both in production and in new and reactivated mines for 2014, these levels will still be below previous levels," EIA said.

While the new numbers are dated, they provide a snapshot of the coal industry's ongoing woes. EIA pointed to competition from natural gas, saturated global markets and regulations.

Separately this week, Goldman Sachs Group Inc. sent a note to clients saying that peak coal is "coming sooner than expected," before the end of the decade.

"The industry does not require new investment given the ability of existing assets to satisfy flat demand, so prices will remain under pressure as the deflationary cycle continues," Goldman said, according to Reuters.

Goldman, which has been shedding coal investments and whose analysts have been more skeptical of coal's future than other firms, pointed to slower growth in China and a drop in that country's imports.

Also this week, Alaska media outlets reported that Usibelli Coal Mine Inc., which owns Alaska's top coal mine, had paused exports amid the market slump. Producers in the state had wanted to increase production.

COAL:

Groups accuse Ore.-based utility of manipulating cost data

Manuel Quiñones, E&E reporter

Published: Wednesday, September 23, 2015

Environmental groups accused Portland, Ore.-based utility PacifiCorp yesterday of manipulating research into power needs and costs to justify extending the life of its coal-fired power plants.

The Sierra Club, the Western Clean Energy Campaign and other groups point to a report by Synapse Energy Economics Inc. that crunched data for the groups using utility-industry software.

Synapse models call for PacifiCorp, a unit of Berkshire Hathaway Inc., to retire boilers at five company-owned coal plants, describing the retirements as the most cost-effective option.

"Rather than objectively letting the data point the way to the most cost-effective plan for consumers, it appears that PacifiCorp is 'putting its fingers on the scales' to keep aging coal-fired power plants operating longer and at unwarranted customer cost," said Bill Arthur, associate regional campaign director with the Sierra Club's Beyond Coal campaign.

PacifiCorp, the groups say, also overpriced renewables and downplayed potential efficiency gains.

Just hours after releasing the study, the Sierra Club said it was contesting PacifiCorp rate requests in California. Groups are also involved as the company discusses resource plans with regulators in Oregon, Utah, Wyoming and Washington.

A PacifiCorp spokesman questioned the accuracy of the groups' assertions, saying efficiency was a major part of the company's resource management plan.

The company's plan could not fully account for U.S. EPA's Clean Power Plan -- which is aimed at curbing greenhouse gas emissions from the utility sector -- because the rule had yet to be finalized, the spokesman said. Regulators, he added, would be scrutinizing PacifiCorp's documents.

NATURAL GAS:

FERC accuses Total of manipulating markets

Published: Wednesday, September 23, 2015

French natural gas firm Total SA and two traders rigged natural gas markets for years, the Federal Energy Regulatory Commission alleged yesterday.

Total made trades at a loss to sway natural gas index prices at least 38 times from 2009 to 2012, FERC alleged. Those losses were then offset by larger gains on other trades.

The company's scheme involved "largely uneconomic trades for physical natural gas during bidweek designed to move indexed market prices in a way that benefited the company's related positions," FERC said.

FERC previously settled similar allegations against JPMorgan Chase & Co., which paid $285 million in fines over the practice in 2013 (*Greenwire*, July 30, 2013). Barclays PLC and BP PLC are disputing similar allegations made against their firms.

A spokeswoman for Total said the company did not believe it had acted improperly and has cooperated with FERC's investigation (Scott DiSavino, Reuters, Sept. 22). **-- SP**

NUCLEAR WASTE:

Contamination plagues former lab near L.A.

Published: Wednesday, September 23, 2015

Acres of chemical and radioactive contamination remain in Southern California nearly 20 years after work ceased at the Santa Susana Field Laboratory, a Los Angeles television station reported, and the lab may have released radiation all across the Los Angeles area.

The lab lies on more than 2,800 acres in the Simi Hills near Simi Valley and the West San Fernando Valley. It was a remote section of Los Angeles and Ventura counties when first developed in 1947, but now there are more than half a million people living within 10 miles of the site.

The Santa Susana Field Lab was home to 10 experimental nuclear reactors and thousands of energy, weapons and rocket tests. Various sections of it were owned by different companies over the years, and NASA used parts of it for scientific experiments and rocket tests.

Area IV was where the nuclear experiments took place, and besides the 10 reactors, this 209-acre section also included a plutonium fuel fabrication facility, a uranium fuel facility and a "hot lab" for remotely cutting up dangerous radioactive material.

Area IV was also home to several nuclear accidents, including one considered by some to be worse than the Three Mile Island incident.

While the Atomic Energy Commission maintained that there was "no release of radioactive materials" from the meltdown, former SSFL employee John Pace counters that assertion. He said that radiation was vented into the atmosphere through both a door and an exhaust vent for weeks after the partial meltdown of the Sodium Reactor Experiment.

"[The radiation] traveled wherever it decided it wanted to travel to," Pace said.

In a statement, the Department of Energy said it's working to clean up the SSFL.

"DOE is committed to the safe cleanup of the Energy Technology Engineering Center and is actively working on groundwater characterization having already completed soil characterization. We look forward to continuing to work with the State of California, Congress, the Chumash tribe, and local stakeholders in fulfillment of this important mission," the agency said (Grover/Glasser, KNBC, Sept. 22). **-- BTP**

CLIMATE:

Major companies commit to renewables

Published: Wednesday, September 23, 2015

Nine major companies today will commit to a long-term goal of moving their operations to be powered by renewable energy, while investment managers controlling about $2.6 trillion in assets agreed yesterday to divest from fossil fuels.

The companies include Johnson & Johnson, Procter & Gamble Co., Starbucks Corp., Wal-Mart Store Inc. and Goldman Sachs Group Inc. The companies that have not already reached 100 percent renewable energy are setting high interim goals, including Procter & Gamble's plan to increase to 30 percent renewable energy from 7 percent now.

"We've been very clear that we think climate change is something that's real and needs to be addressed," said Len Sauers, P&G's vice president for global sustainability. "People that use our products expect a

company like P&G to be responsible."

Meanwhile, Arabella Advisors, a firm specializing in socially responsible finance, reported that its divestment commitment had grown to $2.6 trillion, showing the movement's rapid spread from college campuses to Wall Street as money managers start to think fossil fuels may be a risky investment (*ClimateWire*, Sept. 23).

"That's real money," said Ellen Dorsey, executive director of the Wallace Global Fund, a charity that has backed divestment.

Some of the world's major pension funds and other investment capital pools are now committed to divestment. Leonardo DiCaprio's charitable foundation was the latest to commit yesterday.

In a briefing yesterday, officials from the American Petroleum Institute attacked the divestment campaign as unrealistic and disseminated a report saying the oil industry is helping to fund technologies that reduce greenhouse gas emissions.

"There are those who would advocate for no fossil fuels at all, which is frankly irresponsible, since the United States depends on fossil fuels to meet 80 percent of its energy needs," said Jack Gerard, president of API (Gillis/St. Fleur, *New York Times*, Sept. 23). **-- BTP**

COAL:

Blackhawk snaps up Patriot mines at auction

Published: Wednesday, September 23, 2015

Blackhawk Mining LLC bought half a dozen active coal mines yesterday during an auction central to Patriot Coal Corp.'s second bankruptcy proceeding in the past three years.

While the winning bid has not been released, Blackhawk President Nick Glancy said it was "an expected result" as his Kentucky-based company beat out the designated backup bidder, Connecticut-based Coronado Coal LLC.

Blackhawk, which already operates mines in Kentucky, Indiana and West Virginia, will take over Patriot's West Virginia mines -- Panther, Rocklick, Wells, Kanawha Eagle, Paint Creek and Midland Trail.

The U.S. Bankruptcy Court in Richmond, Va., must approve the deal with Blackhawk, which has seized on the coal industry's slide, acquiring James River Coal Co.'s assets at a bankruptcy sale last year.

Meanwhile, Patriot asked the court to relieve their obligation to pay health care benefits for approximately 6,433 retired workers and dependents, arguing the obligations scare off potential buyers and threaten to destroy the company.

The United Mine Workers of America were not immediately available for comment on the move or auction, but the union has been in talks with Blackhawk about a new collective-bargaining agreement for UMWA-represented miners with the threat of labor strife ahead.

Aaron Isherwood, managing attorney with the Sierra Club, said Patriot's Chapter 11 exit plan doesn't do enough to deal with environmental damage at its mines.

"They have an obligation, even in bankruptcy, to clean up their contamination, and we will fight to ensure

that Patriot is held accountable," Isherwood said (Peg Brickley, *Wall Street Journal*, Sept. 22). **-- DTB**

FEDERAL WORKFORCE:

OPM finds more employees' fingerprints stolen in data breach

Kevin Bogardus, E&E reporter

Published: Wednesday, September 23, 2015

The Office of Personnel Management has determined that more federal employees' fingerprints went missing in this year's massive data breach -- more than five times what the agency originally estimated.

In a statement today, OPM press secretary Samuel Schumach said roughly 5.6 million workers have had their fingerprints stolen in the breach, according to archived data that weren't at first analyzed by the agency and the Department of Defense.

"The subset of individuals whose fingerprints have been stolen has increased from a total of approximately 1.1 million to approximately 5.6 million," Schumach said.

The OPM official said that federal experts believe fingerprint data can be misused in only limited ways but that the government is looking into what ways the hackers could abuse the information.

"An interagency working group with expertise in this area -- including the FBI, [Department of Homeland Security], DOD, and other members of the Intelligence Community -- will review the potential ways adversaries could misuse fingerprint data now and in the future," Schumach said.

In July, OPM disclosed that Social Security numbers and other sensitive information for 21.5 million people were stolen from the agency's background investigation databases. That included the original estimate of 1.1 million people having their fingerprints stolen (*E&E Daily*, July 10).

Nevertheless, the larger figure of those affected by the breach has not changed. In his statement, Schumach noted that the new information regarding more missing fingerprint data "does not increase the overall estimate of 21.5 million individuals impacted by the incident."

The OPM official said those affected by the breach are eligible for free identify theft and fraud protection services. In addition, the agency and DOD are mailing notices to the people whose data were stolen.

The data breach has become a huge headache for OPM. It led to the resignation of Katherine Archuleta, its director, earlier this year (*Greenwire*, July 10).

Further, OPM's latest disclosure on those affected by the data breach is not going to win the agency more fans on Capitol Hill.

"OPM keeps getting it wrong," said Rep. Jason Chaffetz (R-Utah), chairman of the House Oversight and Government Reform Committee, in a statement. "This breach continues to worsen for the 21.5 million Americans affected. I have zero confidence in OPM's competence and ability to manage this crisis. OPM's IT management team is not up to the task. They have bungled this every step of the way."

DOE:

Audit finds 'limited' White House role in FOIA process

Kevin Bogardus, E&E reporter

Published: Wednesday, September 23, 2015

The White House has reviewed a small number of the Department of Energy's responses to public records requests, according to a new inspector general report, which found few problems with DOE's Freedom of Information Act process.

The special report, released today and signed by DOE Inspector General Gregory Friedman, reviewed 55 FOIA cases and 10 appeal cases. In addition, investigators interviewed more than 20 FOIA officers and related staff.

In four of the 55 cases, the IG found the department's Office of the General Counsel provided a proposed FOIA response to the White House.

The department watchdog couldn't ascertain what changes, if any, the White House made to the FOIA responses before they were released to their requesters due to missing documentation.

"Without full retention of case documentation, particularly documents showing changes to redactions or exemptions used, it was impossible to know with certainty what changes were made when the documents went outside the Department for review," the report says.

In addition, "pertinent FOIA-related correspondence between the Department and the White House was not retained in the FOIA files for the four cases," according to the IG.

The department shared the FOIA responses with the White House in response to an April 2009 memorandum by then-White House counsel Gregory Craig. That memo said agencies should consult with his office regarding records requests, including FOIAs, that could disclose documents that involve "White House equities."

Republicans on Capitol Hill have blasted the memo, arguing it makes government less transparent. At a hearing in June, Rep. Jason Chaffetz (R-Utah), chairman of the House Oversight and Government Reform Committee, said the "heart" of the Obama administration's FOIA request backlog lies with the memo (*E&E Daily*, June 3).

Nevertheless, the DOE watchdog saw little wrong with the department's FOIA process.

For example, the IG couldn't find any interference by the department's political appointees in blocking FOIA responses.

"While noncareer personnel, in a few instances, may have been involved in FOIA requests, we were unable to identify any cases where involvement of these individuals resulted in withholding any document or portions of any document that could have otherwise been released or resulted in any undue delay of a response to FOIA requests," said the report.

The IG recommended that DOE management update its FOIA manual if needed and issue guidance on documentation requirements. Management agreed with the recommendation, with the Office of the General Counsel saying it's looking at ways to improve the document control process, according to the inspector general.

EPA:

Agency updates shutdown plan

Kevin Bogardus, E&E reporter

Published: Wednesday, September 23, 2015

U.S. EPA is preparing a contingency plan for a possible government shutdown.

Lawmakers haven't been able to resolve a budget impasse stemming from federal funding for Planned Parenthood, with the government's money now set to run out by the end of this month. So EPA and other agencies are scurrying to update shutdown plans that could lead to the furloughs of thousands of employees.

In an agencywide message sent yesterday, acting Deputy Administrator Stan Meiburg told employees that EPA was updating its shutdown plan in case Congress fails to agree to new funding for the government in time.

"As we saw in 2013, a lapse would mean that a number of government activities would cease due to a lack of appropriated funding, and that a number of employees would again be temporarily furloughed," Meiburg said. "To prepare for this possibility, we are working to update our contingency plans for executing an orderly shutdown of activities that would be affected by a lapse in appropriations."

Meiburg noted that the Obama administration believes such a lapse in funding should not occur and that there is enough time for Capitol Hill to prevent a shutdown.

"The uncertainty of the current circumstances puts our workforce in a difficult situation, and should a lapse occur, it could impose hardships on many employees as well as the people that we serve every day. As we approach the end of the month, we are committed to providing you with updated and timely information on any further developments," Meiburg said.

Last time the government shut down, in October 2013, EPA's operations and personnel were severely affected.

EPA had 1,069 employees report to work during the shutdown two years ago, forcing more than 15,000 workers --- more than 93 percent of the agency workforce -- out of the office (*E&ENews PM*, Sept. 27, 2013).

The Office of Management and Budget has begun to work with agencies across the government to prepare their own shutdown plans.

An OMB spokeswoman said the administration "is willing to accept a clean, short-term continuing resolution to fund government operations" that gives Congress more time to negotiate a more long-term agreement.

"However, at this time," she said, "prudent management requires that the government plan for the possibility of a lapse, and OMB is working with agencies to take appropriate action. This includes agencies reviewing relevant legal requirements and updating their plans for executing an orderly shutdown."

She added that "it is our hope that this work will ultimately be unnecessary and that there will be no lapse

in appropriations."

Others in government said they were consulting with OMB when it came to preparing their own shutdown plans.

Representatives for the Departments of Energy and the Interior said that their departments were working with OMB to take "appropriate action" if the government runs out of funding by the end of this month.

AIR POLLUTION:

Volkswagen isn't first car company caught fudging on emissions

Published: Wednesday, September 23, 2015

Volkswagen AG's admission that it used so-called defeat devices to dupe U.S. EPA emissions tests is the latest in a history of auto industry schemes to avoid regulatory burdens.

While Volkswagen's recent case might seem severe, EPA has caught automakers cheating on emissions tests almost from the moment governments started regulating vehicle emissions more than 30 years ago. Some advocacy groups contend this is part of a legacy of disregard for these kind of tests by car companies.

Regulators have previously caught car companies rigging mileage and emissions testing statistics. European regulators have caught companies taping the doors on test vehicles to make them more aerodynamic. In addition, companies have performed maintenance on test vehicles in ways that are unrealistic in normal driving scenarios to goose the cars' results.

Volkswagen and Chrysler both faced fines in the 1970s for installing defeat devices. EPA also settled with long-haul truck engine manufacturers in 1998 for nearly $1 billion over their use of software to beef up their diesel engines' performance.

"We don't think this will be limited to Volkswagen," said Jos Dings, director of the European Federation for Transport and Environment. "If you look at the testing numbers for the other manufacturers, they are just as bad" (Hakim/Tabuchi, *New York Times*, Sept. 23). **-- SP**

AIR POLLUTION:

Smog could contribute to high suicide rate in Ky. city

Published: Wednesday, September 23, 2015

Air pollution could be a risk factor for suicide, according to a study released earlier this year.

As U.S. EPA is set to decide on tightening smog rules nationwide, Louisville, Ky., may be able to improve its air pollution and suicide rate concurrently, according to Louisville *Courier-Journal* columnist James Bruggers.

"To be sure, overall air quality in Louisville has been improving. That might argue for declining suicide numbers, if there were a direct correlation," Bruggers wrote.

Suicides in Louisville have increased 30 percent this year so far.

The University of Utah study found that the odds of completing a suicide were 20 percent greater for those exposed to higher levels of nitrogen dioxide during the two to three days before their deaths (*Greenwire*, Feb. 25).

Lead author Amanda Bakian stressed that the study in the *American Journal of Epidemiology* did not prove a direct correlation, but it showed that the air pollution could interact with other factors to increase suicide risk.

"Our next step is to determine in more detail exactly what elements -- such as genetic and sociodemographic factors -- are responsible for increasing one's vulnerability to suicide following air pollution exposure," Bakian said.

"Usually, it's not suicide that gets brought up as a reason to clean the air," Bruggers wrote.

"Research has shown that cleaner air prevents many early deaths from heart attacks and lung ailments, and reduces asthma attacks. All in all, however, this new line of exploration offers one more piece of evidence to remind us that cleaner air is better than dirtier air" (James Bruggers, Louisville *Courier-Journal*, Sept. 22). **-- BTP**

Dear Christoph,

Thank you for your help in arranging the telephone call earlier today which EPA hopes that you and your colleagues found useful.

Chris Grundler also has asked me to clarify that it will be important not to rely solely on New European Drive Cycle testing because the vehicles are likely to pass.
The dynamometers should be run in many different test conditions beyond the official test They should be tested in different, off-cycle testing modes to determine their "real world emissions".

As discussed, we encourage you and your colleagues to review all of the information available on the EPA website:

http://www3.epa.gov/otaq/cert/violations.htm

If needed, and if possible within the constraints that we discussed, we will do our best to respond to specific follow-up questions via e-mail.

Best,

Anna

Betreff: Re: EPA charges against VW -- Telephone Call with EPA on September 24

Dear Stephan,

Due to a recent change in Mr. Grundler's schedule, he will no longer be available for a call with Mr. Odenwald on Tuesday, September 29th as we originally offered. As I'm sure you can imagine, this issue is putting tremendous pressure on his schedule which is subject to constant changes.

Mr. Grundler is still available for a call tomorrow (Thursday, September 24th) at 11:00 a.m Washington time but I'm afraid that is the only near-term option available at this point.

Please let us know as soon as possible whether it will be possible to arrange the call tomorrow so we can finalize the logistics.

Also FYI, we have received a separate information request on this issue from an expert within the Federal Ministry of Transportation. We are planning to recommend that they coordinate internally so that there is a single channel of communication with EPA to increase efficiency and to avoid confusion and potential misinformation. I will copy you and Steffen directly on our response and would appreciate your help in facilitating coordination on the German side.

Many thanks...

Anna

Subject: EPA charges against VW

Dear Anna,

Good seeing you this morning. As briefly discussed, here are our questions regarding the Volkswagen law suit:

1. What is the judicial/legal process that will now follow (and how is the interplay between EPA and DoJ)?

2. Apart from a federal law suit, is there a possibility that Volkswagen will also face further court action by individual states (or even class action litigation)?

3. We understand the clean air act is the basis for EPA's action. Could you provide us with an overview of similar actions against car makers over the last years which were based on violations of the clean air act?

Subject: Interview Application and Questions From Southern Weekly, a Chinese Newspaper

Dear EPA,

My name is Jiachen Yue and I am a reporter from Southern Weekly, China's most popular investigative newspaper. We are the only newspaper who interviewed U.S President Obama during his visit to China in 2009.

I noticed that Volkswagen were questioned by the U.S. Environmental Protection Agency on the matter of Exhaust Emissions Device fraud. As a newspaper continuing focus on environment issues, we would like to know more detailed information. Here is my question :

1. When and How did EPA find Volkswagen emissions fraud problem?

2. How does EPA expect Volkswagen solve this problem?

3. As far as we know, exhaust emissions devices of those involved vehicles were supplied by German Bosch Worldwide. Do you think Bosch should therefore take responsibilities?
4.What kind of influence did the Volkswagen produce to the US environment? Why didn't we find it during the past six years ?

Looking forward to your reply。My deadline is this Friday so please let me know as soon as possible. Many thanks!

Best,

Jiachen

Subject: Volkswagen - defeat device
Importance: High

Dear Michael,

how are you? You may imagine that the EPA case against Volkswagen regarding use of defeat devices is causing some turbulences here in Germany.

KBA – the German type approval authority – is currently investigating the case. Of course they are in direct contact with Volkswagen, but currently most of our information is still based on press announcements. Therefore I would like to ask you whether US EPA can provide us more information.

If you are not involved can you please provide us the right contact persons for an official request?

Best regards

Stephan

Subject: Interview Application and Questions From Southern Weekly, a Chinese Newspaper

Dear EPA,

My name is Jiachen Yue and I am a reporter from Southern Weekly, China's most popular investigative newspaper. We are the only newspaper who interviewed U.S President Obama during his visit to China in 2009.

I noticed that Volkswagen were questioned by the U.S. Environmental Protection Agency on the matter of

Exhaust Emissions Device fraud. As a newspaper continuing focus on environment issues, we would like to know more detailed information. Here is my question :

1. When and How did EPA find Volkswagen emissions fraud problem?

2. How does EPA expect Volkswagen solve this problem?

3. As far as we know, exhaust emissions devices of those involved vehicles were supplied by German Bosch Worldwide. Do you think Bosch should therefore take responsibilities?

4.What kind of influence did the Volkswagen produce to the US environment? Why didn't we find it during the past six years ?

Looking forward to your reply。My deadline is this Friday so please let me know as soon as possible. Many thanks!

Best,

Jiachen

Dear Anna

Thanks for the kind email and the additional information . I have to thank you for enabling and organizing the phone conference. We consider the phone conference as very useful. The information and explanation given by Mr. Grundler are very important for us to understand the situation. I think with this first exchange of views we set a good basis, and if needed we will continue and proceed as agreed.

Best regards

Christoph

Betreff: Re: EPA charges against VW -- Telephone Call with EPA on September 24 CONFIRMED

Dear Christoph,

Thank you for your help in arranging the telephone call earlier today which EPA hopes that you and your colleagues found useful.

Chris Grundler also has asked me to clarify that it will be important not to rely solely on New European Drive Cycle testing because the vehicles are likely to pass.
The dynamometers should be run in many different test conditions beyond the official test They should be tested in different, off-cycle testing modes to determine their “real world emissions”.

As discussed, we encourage you and your colleagues to review all of the information available on the EPA website:

http://www3.epa.gov/otaq/cert/violations.htm

If needed, and if possible within the constraints that we discussed, we will do our best to respond to specific follow-up questions via e-mail.

Best,

Anna

Dear Stephan,

Due to a recent change in Mr. Grundler's schedule, he will no longer be available for a call with Mr. Odenwald on Tuesday, September 29th as we originally offered. As I'm sure you can imagine, this issue is putting tremendous pressure on his schedule which is subject to constant changes.

Mr. Grundler is still available for a call tomorrow (Thursday, September 24th) at 11:00 a.m Washington time but I'm afraid that is the only near-term option available at this point.

Please let us know as soon as possible whether it will be possible to arrange the call tomorrow so we can finalize the logistics.

Also FYI, we have received a separate information request on this issue from an expert within the Federal Ministry of Transportation. We are planning to recommend that they coordinate internally so that there is a single channel of communication with EPA to increase efficiency and to avoid confusion and potential misinformation. I will copy you and Steffen directly on our response and would appreciate your help in facilitating coordination on the German side.

Many thanks...

Betreff: Fw: Volkswagen - defeat device -- Contact with EPA

Dear Christoph,

Given the telephone call earlier today with EPA's Office of Transportation and Air Quality Director Chris Grundler, we assume that we also have responded to the attached (separate) information request.

As we discussed, if there are specific follow-up questions, we will do our best to respond via e-mail within the constraints dictated by the ongoing investigation.

Best,

Anna

Mr. Albus and all,

Thank you for your outreach. Please allow me a couple days to confer internally to ensure we have the right group convened for a call.

Best Regards,
Evan

Dear Mr. Belser

Regarding the Volkswagen issue Mr. Olechiw provided the information, that you are the responsible contact person at EPA. Together with my colleague Stephan Redman and colleagues from our type approval agency (KBA) we are very much interested in a phone conference with you. Would it be possible for you to have such a phone conference this Friday (25th).

Thanks in advance.

Best Regards

Christoph Albus

Hello Stephan!

I can imagine that this has caused quite the stir in Germany. You can reference the Notice of Violation that we sent to VW: http://www3.epa.gov/otaq/cert/documents/vw-nov-caa-09-18-15.pdf

This should help answer some of your questions. For now you may contact Evan Belser here at EPA. (Belser.evan@epa.gov, 001-202-564-6850)

If you would like to talk this morning, I am available after 3 PM your time.

Best Regards,

Mike

Dear Michael,

how are you? You may imagine that the EPA case against Volkswagen regarding use of defeat devices is causing some turbulences here in Germany.

KBA – the German type approval authority – is currently investigating the case. Of course they are in direct contact with Volkswagen, but currently most of our information is still based on press announcements. Therefore I would like to ask you whether US EPA can provide us more information.

If you are not involved can you please provide us the right contact persons for an official request?

Best regards

Stephan

In-Situ Emissions Performance of EPA2010-Compliant On-Highway Heavy-Duty Diesel Engines

James Smith, Justin Greuel, Brian Ratkos, and Ethan Schauer
US Environmental Protection Agency

ABSTRACT

Implementation of EPA's heavy-duty engine NO_x standard of 0.20 g/bhp-hr has resulted in the introduction of a new generation of emission control systems for on-highway heavy-duty diesel engines. These new control systems are predominantly based around aftertreatment systems utilizing urea-based selective catalytic reduction (SCR) techniques, with only one manufacturer relying solely on in-cylinder NO_x emission reduction techniques. As with any new technology, EPA is interested in evaluating whether these systems are delivering the expected emissions reductions under real-world conditions and where areas for improvement may lie.

To accomplish these goals, an in-situ gaseous emissions measurement study was conducted using portable emissions measurement devices. The first stage of this study, and subject of this paper, focused on engines typically used in line-haul trucking applications (12-15L displacement). Vehicles with the engine families of interest were rented from commercial fleets and driven under conditions that were typical of daily driving while sampling emissions. The data was then evaluated, using a number of metrics, to determine overall emission control effectiveness as well as compliance with not-to-exceed emission standards.

CITATION: Smith, J., Greuel, J., Ratkos, B., and Schauer, E., "In-Situ Emissions Performance of EPA2010-Compliant On-Highway Heavy-Duty Diesel Engines," *SAE Int. J. Engines* 6(3):2013, doi:10.4271/2013-01-2430.

INTRODUCTION

Background

The US Environmental Protection Agency (EPA) is tasked with promulgating and enforcing emission regulations for motor vehicles and engines under Title II of the Clean Air Act. For the heavy-duty on-highway sector, which encompasses all vehicles with a gross vehicle weight rating above 14,000 lbs, these emissions regulations are applicable to engines, independent of the vehicle in which they are used. Engines in this sector produce an estimated 33% of total mobile-source NO_x emissions and 36% of total mobile-source particulate matter (PM) emissions [1], which underscores the importance of ensuring adequate emission controls from these products.

For the 2004 model year (MY), EPA began the implementation of a set of emission standards that ultimately resulted in the current, 2010-level standards (sometimes referred to as "EPA2010") [2]. For MY 2010, the NO_x standard was lowered to 0.20 g/bhp-hr, while retaining the MY 2007-level PM standard of 0.01 g/bhp-hr. The technology package required to meet the PM standard has universally been the adoption of diesel particulate filters (DPFs) along with electronic control of combustion-related parameters. For adequate NO_x reduction, however, both in-cylinder (high-exhaust gas recirculation or EGR) and aftertreatment-based solutions have been pursued. For the latter, the most widespread solution has been the use of urea-based selective catalytic reduction (SCR) devices. These systems require the use of a liquid reductant, known as "diesel exhaust fluid" (DEF), which is sprayed into the exhaust stream upstream of the SCR catalyst. DEF decomposes into ammonia and reacts with exhaust constituents, ultimately reducing NO_x to N_2 and H_2O, according to:

$$4NO + 4NH_3 + O_2 \rightarrow 4N_2 + 6H_2O$$

$$2NO_2 + 4NH_3 + O_2 \rightarrow 3N_2 + 6H_2O$$

$$NO + NO_2 + 2NH_3 \rightarrow 2N_2 + 3H_2O$$

For these reactions to occur, the SCR catalyst generally needs to be above 150° to 200°C. Engine manufacturers take

active measures, generally referred to as SCR thermal management, to both achieve and maintain these "light-off" temperatures. The effectiveness of these strategies have profound impacts on overall emissions performance, which will be shown later in this paper. In addition to temperature constraints, several other factors, such as ammonia-to-NO_x ratio, catalyst formulation and catalyst size, influence NO_x conversion efficiency and therefore need to be robustly addressed in the system design and calibration.

To ensure emissions are controlled in a manner consistent with the regulations, EPA relies on a broad certification and compliance system. The certification process generally takes place well in advance of production and involves several interactions between manufacturers and EPA so that all aspects of the emission control system are well understood. Testing on low-hour and aged engines is also part of the certification process, which is how compliance with the emission standards is evaluated.

Ensuring compliance beyond certification can be more difficult and requires tailored approaches, which depend on the segment under regulation. Production line testing, defect reporting and in-use testing are a few regulatory requirements that may be applicable to engine manufacturers after the time of certification. In addition, EPA conducts its own "confirmatory" testing of new engines, selective enforcement audits of manufacturer facilities and engines, as well as testing of in-service engines and/or vehicles to evaluate whether products are performing as expected.

With SCR being a relatively new technology to this sector, EPA set out to determine whether the expected emissions reductions were occurring under real-world conditions. In addition, EPA needed to determine if certain operating conditions led to less favorable NO_x control than others. For example, certain light-load conditions may challenge the ability of the thermal management strategy to sustain SCR light-off and therefore cause large increases in NO_x emissions that would not be reflected under conventional emission testing. Understanding how each manufacturer deals with such situations is critical to ensuring real-world emissions reductions. To address these needs, EPA embarked on an in-situ study of gaseous emissions from class-8 (>33,000 lb gross vehicle weight) trucks equipped with 2010-level heavy-duty diesel engines. The details and results of this study are the subject of this report.

Compliance Metrics/Test Procedures

A key component of demonstrating compliance with emission standards at the time of certification involves testing on an engine dynamometer over two prescribed test cycles. One cycle is meant to replicate mainly transient driving (Heavy-Duty Transient Test, or FTP) and the other is more typical of freeway-type operation (Supplemental Emission Test, or RMC-SET) [3]. Manufacturers are also expected to have a basis for ensuring compliance with "Not to Exceed" (NTE) requirements at the time of certification, which will be described in further detail later in this paper.

Emissions are measured over these test cycles and the results are normalized by the work done by the engine over the test cycle. The result is a specific emission value, in g/bhp-hr, that can be compared to the emission standard. Adjustment factors are normally applied to these test results to account for aging affects (deterioration factors, or DFs) and influences of infrequently regenerating emission control devices (such as DPFs).

Engine manufacturers generally perform certification testing well in advance of mass production of their products. Along with testing over the prescribed duty cycles, manufacturers are required to demonstrate that their products will comply with the emission standards for the full useful life of the engine, which is 10 years or 435,000 miles for an engine in a typical Class 8 application. This is normally accomplished through durability testing, possibly including accelerated aging methods, to establish DFs. At the time of certification, manufacturers are also required to describe aspects of the emission control system that are not active during the certification test cycles. This typically involves detailed engineering evaluations of strategies that control emissions under varying ambient conditions, engine warm-up, and idling, amongst others.

Independently verifying the performance of emission control systems on production engines or engines from in-service vehicles is a key to achieving the expected emissions reductions prescribed by regulation. Testing engines over the certification test cycles is perhaps the most basic verification testing that can be done by EPA. However, this type of testing requires removal of the engine from the vehicle and adds significant cost and complexity to the test program. The test procedures associated with the NTE requirements briefly mentioned earlier provide a method for conducting in-situ emission measurements and evaluating compliance while the engine remains installed in the vehicle. Under NTE testing procedures, only engine operation within a certain speed and torque range is evaluated and compliance is judged against an "NTE threshold," which includes measurement and in-use allowances. These allowances add margins to account for variability that may result from testing vehicles in-situ using portable emissions sampling equipment, recognizing that test conditions are not as well-controlled as a test cell environment. It is also worth clarifying that compliance with NTE requirements can also be evaluated in a test cell environment. In this case, measurement and in-use allowances are not applicable.

While the NTE methods provide a valuable tool for evaluating compliance while the engine remains in the vehicle, NTE testing conditions may be quite similar to the certification duty cycles and the NTE threshold can be more than twice the emission standard. Therefore, it is also important to have tests available for broader evaluation of the emission control system. While these tests, which will be described later in this paper, may not provide data ultimately

Downloaded from SAE International by James Smith, Tuesday, September 03, 2013 07:56:45 AM

used for compliance determinations, they offer insight into the effectiveness of emission control technologies and can guide future certification actions. This paper will present results in the context of both compliance with NTE emission standards and overall emission control ability, as determined from in-situ testing.

Previous Studies

California Air Resources Board (CARB) has recently been conducting in-situ evaluations of heavy-duty vehicles and recently published their findings [4]. This study was similar to the study presented in this paper, however CARB chose to conduct a wider range of tests on a more limited number of vehicles when compared to this study. Their findings were generally consistent with ours and where applicable, similarities and differences between the two studies will be highlighted.

West Virginia University has conducted a number of studies [5, 6, 7, 8] investigating emissions from heavy-duty engines and vehicles as well as the test methods themselves. Most recently, they studied the effects of new and aged aftertreatment systems on 1998 model year class-8 vehicles [9]. While this study presents interesting findings on aging affects, the test subjects were not representative of true 2010-level commercially available engines.

A number of additional studies involving in-situ heavy-duty diesel emissions have been undertaken and published in the literature [10, 11, 12, e.g.]. Since these studies were predominantly conducted on pre-2010 level emission control systems, there remains a need to further investigate emissions from current generation engines.

EXPERIMENTAL DETAILS

Test Equipment

All testing reported in this paper was completed using a Semtech-DS (Sensors, Inc.) portable emissions measurement system (PEMS) and associated exhaust flowmeter (EFM; Sensors, Inc.). This unit is capable of raw emissions measurements of gaseous constituents (CO, CO_2, NO, NO_2, HC) to the precision, accuracy and repeatability requirements of 40 CFR Part 1065, Subpart J. In addition to gaseous emissions, the PEMS unit records weather data (temperature, pressure, rel. humidity), GPS tracking data, and vehicle interface (VI) data available over the engine's diagnostic port. This VI data includes a variety of engine and exhaust temperatures/pressures as well as vehicle speed, engine speed and information to calculate engine torque. The latter is critical for this study, since emissions need to be normalized by work for comparison to the emission standards. All data is recorded at 1 Hz.

A dedicated post-processing software product is supplied with the PEMS equipment that converts the raw data file to a useable format. A limited number of user inputs, such as fuel properties and a peak torque curve, are used by this software to calculate brake-specific emissions as well as all information to evaluate compliance with NTE standards. The output file consists of second-by-second data (both as-recorded and as-calculated), summary data, and data from recent calibration checks.

Zero, span, and audit checks were performed prior to, and immediately following testing, consistent with the requirements of 40 CFR Part 1065 and the recommendation of Sensors, Inc. When pre and post-test span values were within specification, and zero checks were stable, analyzer drift was found to have a minimal impact on the results. As an added quality check, the total fuel consumption as measured by exhaust carbon was compared to the value based on the VI broadcast. An unexpectedly large difference between these two values is indicative of a leak in the sample path or other analyzer fault. Finally, a quick check is made on all recorded data channels to determine if signals dropped out during testing. While it is not uncommon for any signal to drop out for a few seconds over the course of a day, any significant loss of data usually resulted in the test being repeated.

Test Subjects

As stated earlier, the subject of this study was 2010-level heavy-duty diesel engines. More specifically, the focus was on the engines typically found in class-8 line-haul trucking applications. These engines are normally 6-cylinders and displace between 11 and 16 liters. Cummins, Detroit Diesel, Navistar, PACCAR, and Volvo are the sole producers of engines in this segment in the United States. At the time of this study, Navistar was relying on high-EGR for NO_x reduction while all others were utilizing SCR aftertreatment.

To gain the broadest perspective of emissions from these engines, EPA attempted to locate the most common engines from each manufacturer in this size segment. Vehicles were normally sourced from large daily rental fleets and two vehicles were tested for each engine family selected (see Table 1).

Table 1. Engines included in this study

Manufacturer	Model	Engine Family	NOx Control	NOx Std or FEL (g/bhp-hr)
Cummins	ISX15	B/CCEXH0912XAP	SCR	0.35
Detroit Diesel	DD13	BDDXH12.8FED	SCR	0.20
Detroit Diesel	DD15	CDDXH14.8EED	SCR	0.20
Navistar	MF13	BNVXH0757GA/C	High-EGR	0.50
PACCAR	MX13	A/BPCRH12.9M01	SCR	0.20
Volvo	D13	BVPTH12.8S01	SCR	0.20

For certification, the regulations require engines of similar size, architecture, and emissions controls to be grouped into "engine families." Engine families are identified by a 12-digit alphanumeric name and the first digit of the family name indicates the model year of the engine ("A"=2010, "B"=2011, etc.). Typically, engine families are certified to the same emission standard (e.g., the 0.20 g/bhp-hr NO_x standard). However, the regulations also allow engine manufacturers to certify an engine family to a self-declared

THIS DOCUMENT IS PROTECTED BY U.S. AND INTERNATIONAL COPYRIGHT.

Downloaded from SAE International by James Smith, Tuesday, September 03, 2013 07:56:45 AM

emission standard that may be above or below the normal emission standard. This alternate standard is known as a "family emission limit" (or FEL) and becomes the applicable emission standard for that family. FELs below the emission standard can be used to generate emission credits and FELs above the standard must use previously generated credits. Two of the engine families included in this study were certified to FELs above the emission standard, using previously banked credits, and are identified in Table 1.

To be eligible for testing, each vehicle was required to have been maintained according to manufacturer recommendations, which was verified through maintenance records, and have no active fault codes. All of the engines tested were from model years 2010 through 2012 and were in approximately the first quarter of their regulatory useful life (<125,000 miles). While aging effects are of interest to the agency, this study was targeted towards low-hour emissions as a means of establishing a baseline.

The vehicles in which these engines were installed were all tractor-trailers and consisted of both sleeper-cabs and day-cabs. All vehicles were equipped with Eaton-Fuller 10-speed manual transmissions. When testing in a loaded configuration, a flatbed trailer was loaded with concrete parking barriers to yield a total gross vehicle weight near 80,000 lbs.

Test Plan

Testing in support of this study primarily involved three elements. The first is predominantly freeway operation, where sections of local interstates were driven multiple times per day with a loaded trailer. Five drive routes are used for this type of testing and are slightly varying in distance, average speed, and grade. This type of operation was meant to maximize the production of data qualifying under the NTE test procedures. These procedures require operation in a moderate to highly loaded region of the engine operating map. This "NTE zone" is highlighted in Figure 1, below, and the engine must be operating in this zone for at least 30-consecutive seconds to constitute a valid "NTE event," where compliance with the standards can be judged.

The second element of the test program was unloaded operation over one of the freeway test routes. This day of testing was essentially the same as those described above, except without the flatbed trailer. This test was meant to assess the ability of the emission control system to function under light engine loads that promote low exhaust temperatures. As mentioned previously, exhaust enthalpy is critical to SCR NO_x conversion and managing exhaust temperature is a key element of the system design and calibration.

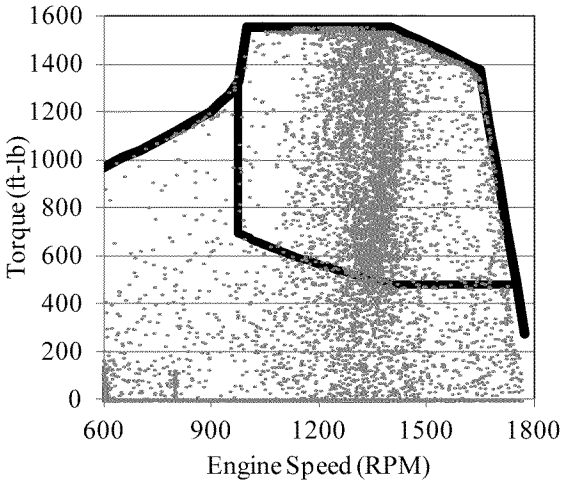

Figure 1. Example of typical freeway route speed/torque operating points. The peak torque curve and NTE zone boundary are overlaid in black.

The third element of the test program involved mixed driving conditions, hereafter referred to as the "urban" test route. This route consisted of driving mainly surface roads through areas of varying traffic density between Detroit and Ann Arbor. The total test route is approximately 60 miles in length and this is repeated three times in a testing day, with an average speed of approximately 35 mph (compared with 45 to 55 mph for the freeway routes). This route is meant to asses the ability to control emissions during transient conditions, where exhaust temperatures and flow rates are widely varied. This test was conducted with the loaded trailer.

Table 2. Typical parameters from the 6 drive routes. Maximum grade represents the maximum that is sustained for at least 30 continuous seconds of driving.

	Distance	Avg Speed	Avg Power	Repeats/day	Max Grade
Route	miles	mph	bhp/mi		
1	21	51	3.59	13	1.8%
2	20	49	3.95	13	2.8%
3	27	50	3.58	13	1.7%
4	15	47	3.83	13	2.3%
5	19	52	3.59	13	1.6%
Urban	61	33	4.13	3	1.5%

For each vehicle, the test program consisted of five days of freeway testing with the trailer, one day of testing without the trailer, and one day of testing over the urban route. The result was a test plan spanning approximately two weeks per vehicle, including a half day for equipment setup and tear down. As the program was administered throughout the year (in Michigan), ambient conditions varied significantly, as shown in Table 3.

D13	974-997	8-22	20-65

Data Analysis

Once the data was processed using Sensors' post-processing software, all other data analysis was completed in Excel. The results relevant to this paper are NTE performance, total NO_x control ability, and idle NO_x control. The data will be presented and discussed in terms of three terms that are worth clarifying:

• **Applicable Emission Standard:** The regulatory emission standard (0.20 g/bhp-hr) or the FEL

• **NTE Standard:** The applicable emission standard times 1.5

• **NTE Threshold:** The NTE standard plus measurement and in-use allowances, which is used for determination of compliance with in-use testing regulations [13]

The post-processing software automatically identifies and logs qualifying NTE events. Each event is at least 30 seconds in length and represents a period of continuous operation within the NTE zone. Once operation exits this zone (accelerator pedal let-up, most commonly), the NTE event is completed and emissions and work completed from that event are treated as an independent test interval. During testing over the freeway routes, 100 to 150 NTE events were normally recorded over the course of a testing day. Over the urban route, this dropped to around 30 to 60 events per day due to the more transient nature of this route. Without a trailer, very few NTE events were recorded (<10) due to the light engine loading.

The regulations [13] require that 90% of time-weighted NTE events comply with the NTE threshold, which is known as the "pass ratio" criterion. To calculate the pass ratio, the emission rate from each NTE event is compared to the NTE threshold. If the result is below the threshold, the time (in seconds) from that NTE event is logged. The total time from passing NTE events is then summed and divided by the total time of all NTE events (passing or failing), which yields the pass ratio.

In addition to operation within the NTE zone for at least 30-seconds, the regulations (40 CFR Part 86, subpart N) outline additional conditions required in order to use an NTE event for evaluating compliance with the NTE requirements. These include periods of:

• NO_x aftertreatment warm-up (aftertreatment exit temperature <250° C)

• Cold temperature operation (both intake manifold and coolant temperature)

• DPF regeneration (not strictly an exclusion, but may require unique analysis)

For the data presented in this paper, the provisions above were only considered if compliance with the pass ratio criterion would have been jeopardized by not utilizing them. In many cases, these provisions proved to be unnecessary and inclusion of the associated NTE events resulted in a much larger data set. In addition to pass ratio, the simple average of NO_x emission rates over all NTE events are presented, which is simply the mass of NO_x emitted during NTE events normalized by the total time associated with these events (in grams per hour).

While the pass ratio represents an official compliance metric for in-situ testing, it only provides information on a limited operating region of the engine (the NTE zone). Additionally, transient emissions control is not addressed adequately using only NTE metrics, since at least 30 seconds of operation in the NTE zone is required. To gain a better perspective of overall NO_x control, the total NO_x emission rate for a testing day was calculated on both a gram per hour and gram per mile basis. Understanding that this includes all types of operation, from idle to full-throttle acceleration, the data is not used for a measure of compliance. Instead, it presents an informative picture of overall emissions control ability and highlights are as where future improvements are possible.

Finally, vehicles in this segment spend significant portions of time at idle, where the engine is supporting hotelling loads of the vehicle. The drivers used in this study were not given explicit instructions other than the route they were to drive and then umber of times to repeat the route. All other aspects, including idling behavior, were reflective of how these operators would normally use their vehicles. As a result, each testing day included a significant portion of time spent at idle. During this time the emissions equipment was sampling and the NO_x emissions were included in the totals discussed in the previous paragraph.

Idle contributions can have a large impact on overall NO_x emissions. In addition, these engines have unique strategies to limit emissions at idle and it is advantageous to evaluate the effectiveness of each of these strategies. Therefore, data from idle operation was also analyzed separately from total NO_x emissions. For this analysis, the total data from a testing day was filtered using the 30-second average vehicle speed, where a zero speed under this filter was considered idling. The 30-second average criterion was added so that only extended idling events were included in this analysis and not simply stop events at traffic lights and turn-around points. These data were then normalized to total idle time, resulting in a metric that can be compared to California's clean idle standard of 30 g/hr of NO_x[14].

RESULTS

NTE Performance

As mentioned previously, the most basic metric for evaluating in-situ emission control performance is the NTE pass ratio. The results are all discretized by the three basic operating conditions that were studied: freeway operation, urban operation, and light-load/no-trailer operation. In some instances, data for certain engines was not collected due to scheduling, weather, or other constraints(DD13 no-trailer, for example). In these cases, the data is absent from the plots or the error bars are absent (if only one test was completed).

Figure 2 presents the average pass ratio across all days of testing and all vehicles of a given configuration. Since there were five freeway routes, each blue bar generally represents ten data points(five for each vehicle). Similarly, the red and green bars generally represent two data points each (one for each vehicle). One exception is for the ISX15 no-trailer test which had only one testing day producing any valid NTE events after applying provisions for after treatment warm-up. The error bars represent the range of pass ratios recorded for each engine family. For example, testing of the PACCAR MX13over the freeway routes yielded pass ratios between 0.93 and 1.00.

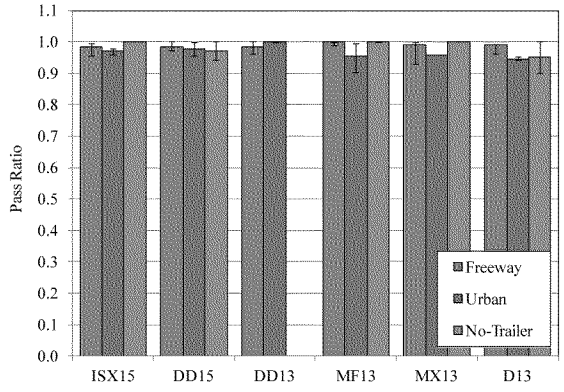

Figure 2. Average pass ratios for each engine over three drive configurations. Each bar represents the average of all vehicles tested and all days of testing (if applicable).

All vehicles complied with the 0.90 pass ratio criterion across all tests. This is encouraging, particularly when considering the number of vehicles and tests completed. For a sense of scale, the above plot represents nearly 7,800 NTE events and over 76 hours of operation in the NTE zone.

While all testing revealed compliance with the pass ratio criterion, the necessity of using the aforementioned exclusion provisions varied by manufacturer. For example, at no point was it necessary to exclude an NTE event due to the cold temperature operating provision, despite the fact that 50% of the data (on average) qualified for this provision. Only one vehicle over one test (ISX15, no-trailer) required the use of the NO_x aftertreatment warm-up provision to satisfy the pass-ratio criterion. Finally, only a few of the test candidates (D13 and one MX13) required the exclusion for DPF regeneration to satisfy the pass ratio criterion, however these events were extremely rare. The necessity of utilizing the available provisions is not meant as an indicator of compliance, rather it demonstrates that it may be worthwhile for EPA to revisit the appropriateness of these exclusions in future versions of the testing regulations.

While the NTE pass ratio analysis shows that this group of engines is capable of meeting the regulatory requirements, it does little to show the comparative level of emission control these engines have. To better show this, the average NO_x emission rates during NTE events were calculated and are presented in Figure 3. For each testing day, the NO_x emitted during NTE events were divided by the total time of the NTE events to yield a single, average NO_x rate per testing day. For each vehicle and drive condition (where multiple tests occurred for a given condition), the range of average NTE NO_x emission rates are shown by the error bars. Only NTE events included in the calculation of the pass ratio are included in this analysis.

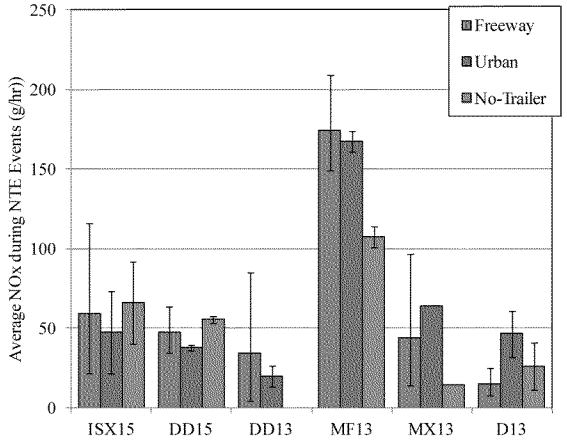

Figure 3. Average NO_x emission rate during NTE events for each engine over each type of drive condition. Bars represent range of average rates witnessed for each engine/drive condition.

What is initially evident from this figure is that all SCR-equipped engines have generally low emission rates during NTE events, regardless of driving condition. Since operation in the NTE zone involves moderate to high-power output, it also leads to exhaust temperature conditions favorable for SCR operation. The NTE NO_x emission rates of the SCR-equipped engines in Figure 3 typically scale to brake-specific emissions in the 0.05 to 0.25 g/bhp-hr range under NTE-type power output conditions, which is far below the NTE threshold (0.55-0.78 g/bhp-hr for these engines). This level of control under NTE conditions is important, since an estimated 95% of operation for line-haul, sleeper-cab applications (and 81% of line-haul, day-cab applications)

occurs during steady-state, moderate to high load (NTE-like) operation. [15, Ch. 3.4.3].

For the engines with high-EGR as the primary NO_x control mechanism, the average rate of NTE NO_x emissions is substantially higher. As power output is increased, such as for NTE-type operation, in-cylinder conditions become more favorable for NO_x production (higher peak pressures and temperatures). At the same time, a limited amount of EGR can be used without sacrificing performance and driving up particulate matter emissions. Some evidence of this can be seen by comparing the freeway and no-trailer data for the Maxxforce 13. While both are based on conditions within the NTE zone, the no-trailer operation occurs at a much lower power output level, which allows for more EGR and lower NO_x. Across all three operating conditions, the emission rates shown in Figure 3 scale to approximately 0.50 to 0.65 g/bhp-hr, which is still well below the NTE threshold of 1.00 g/bhp-hr for this family.

Overall NO_x Performance

While NTE analysis is important from a compliance perspective, and it provides good insight into certain operating conditions, it does not adequately address emissions from highly transient operation and other operating conditions outside of the NTE zone. To gain a better perspective of overall NO_x control ability (not just within the NTE zone), the average total NO_x emission rates (including idle operation) are presented in Figures 4 and 5. To review, this represents the total mass of NO_x emitted over a testing day, normalized by the duration of, or distance travelled during, that same period. In both figures, the error bars represent one standard deviation where two or more data points were available.

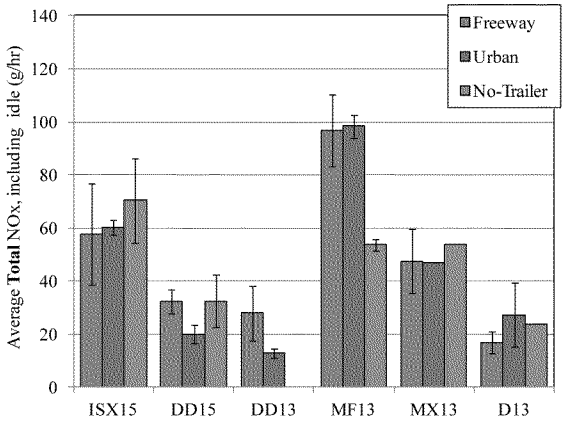

Figure 4. Average total NO_x emission rate for each engine over each type of drive condition, including idle periods, in grams per hour

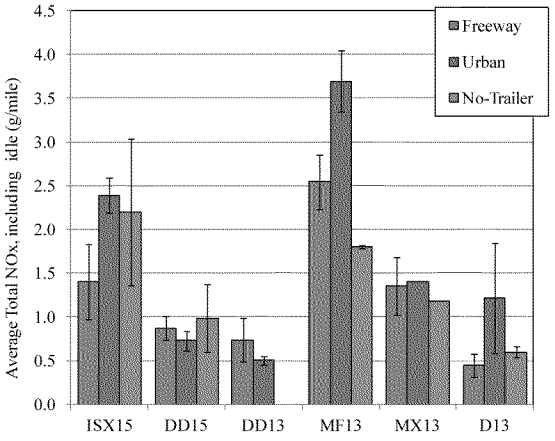

Figure 5. Average total NO_x emission rate for each engine over each type of drive condition, including idle periods, in grams per mile

Over the freeway test routes, the DD15, DD13, and D13 (all certified to the 0.20 g/bhp-hr emission standard) showed well-controlled NO_x emissions, with little variability across tests. The MX13 was slightly higher and the reason for this is related to idle, which will be discussed later. The ISX15 was certified to an FEL above the emission standard (0.33 g/bhp-hr), which explains some of the offset from the other SCR-equipped engines. Finally, the Maxxforce 13 had the highest FEL of the group (0.50 g/bhp-hr) and the overall level of emission control reflects this.

Urban driving as well as no-trailer operation both challenge the performance of SCR systems by reducing the exhaust heat available to maintain SCR light-off. Throughout this study, the DD15, DD13, MX13, and D13 have consistently been the most successful at managing SCR thermal conditions, as evidenced by the very low emissions across driving conditions. In contrast (and consistent with CARB's study) the ISX15 had less effective thermal management of the SCR, which caused the average NO_x emission rate to increase for both urban driving and no-trailer operation (despite a much lower vehicle weight during no-trailer testing). Even with adequate thermal management, no-trailer operation clearly remains a challenge for all SCR systems since emissions would be expected to decrease with the much lighter gross vehicle weight.

Navistar's high-EGR system is less sensitive to drive conditions since it is not relying on sufficient exhaust temperature to function effectively. As mentioned previously, emission rates for this technology scale better to engine loading (or gross vehicle weight, by proxy) which is further evidenced by comparing loaded and unloaded conditions in Figure 4.

Overall NO_x Performance (No Idle)

If the data presented in Figures 4 and 5 is filtered to remove extended idling events, further insight into emission

Downloaded from SAE International by James Smith, Tuesday, September 03, 2013 07:56:45 AM

control effectiveness can be made. Figures 6 and 7 present the overall NO_x emission rate without extended idling events in grams per hour and grams per mile, respectively. The effect of removing idle emissions on the average emission rate varied across manufacturers with some having higher average emission rates (ISX15, Maxxforce 13), some were lower (MX13), and some remained relatively unchanged (DD15, DD13, D13). The nature of the effect depended on whether the idle emission rate was higher, lower or approximately the same as when under load and driving.

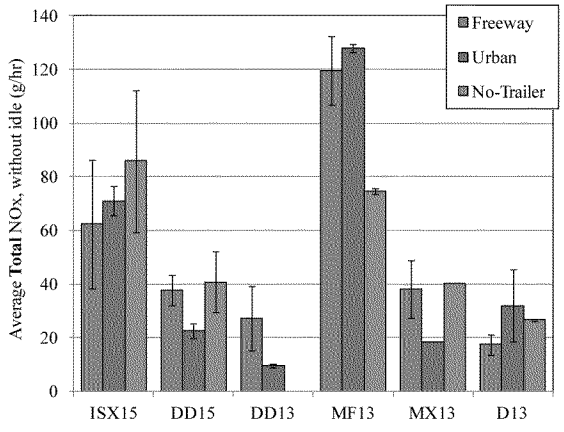

Figure 6. Average total NO_x emission rate for each engine over each type of drive condition, excluding idle periods, in grams per hour

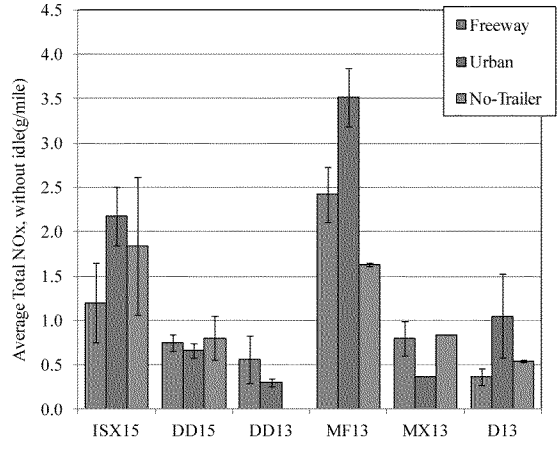

Figure 7. Average total NO_x emission rate for each engine over each type of drive condition, excluding idle periods, in grams per mile

Perhaps the most significant difference between the idle-inclusive and idle-exclusive data occurred with the PACCAR MX13. When idle data is included, the average emission rate was between 50 and 60 g/hr, independent of drive condition and loading, which was significantly above the other engines certified to the 0.20 g/bhp-hr emission standard. However, when idle data is excluded, this engine performed much more consistent with the other similar engines including exceptional NO_x control over the urban test route. The fact that NO_x emissions from extended idling can have such a disproportionately large influence highlights the need to further address this aspect of operation.

Idle Performance

Idling presents unique challenges for emission control systems. Exhaust temperatures quickly fall below levels needed to sustain SCR light-off, leaving EGR and modulation of fuel injection parameters as the main methods for minimizing NO_x emissions. However, the relatively cold intake manifold conditions during idle also presents challenges, mainly related to the formation of condensate from the exhaust gases being recirculated, further limiting control ability from EGR.

While EPA discourages extended idling, it is also recognized as common practice in the trucking industry and we therefore seek to reduce its emissions impact. Both EPA and CARB have encouraged idle-reduction techniques through programs such as EPA's SmartWay. To address periods of unavoidable idling, CARB has also instituted idle emission standards, known as the "clean idle" program. Certification to the standards of this program requires that manufacturers emit no more than 30 g/hr of NO_x while idling at both base idle and 1100 RPM under prescribed test conditions. For most commercial vehicles, California clean idle certification is an option available at the time of purchase. Clean idle certification was not a requirement for inclusion in this test program, however all vehicles except for those equipped with the PACCAR MX13 were certified to the clean idle standards. While PACCAR does offer this as an option, the owner of these particular vehicles (all from the same fleet) chose not to add it for unknown reasons.

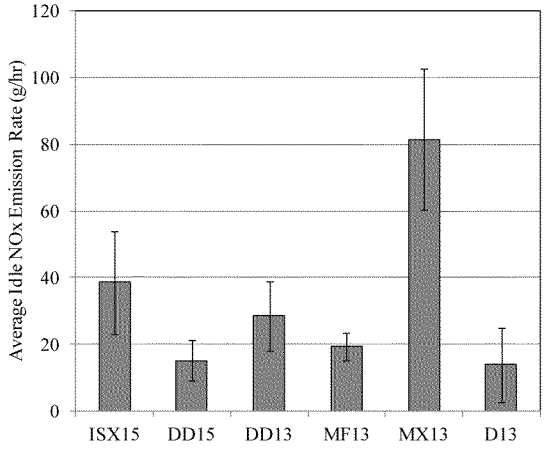

Figure 8. Average idle NO_x emission rates

Figure 8 presents the idle NO_x emissions rates for the tested vehicles. This data is not broken out into freeway, urban, and no-trailer conditions since that has no bearing on the idle periods from those testing days. For each testing day, the total NO_x emissions were normalized by the time spent

THIS DOCUMENT IS PROTECTED BY U.S. AND INTERNATIONAL COPYRIGHT.

idling. While this does not represent data that is directly comparable to CARB's standard (due to idle speed variation, ambient conditions, etc.), it does provide insight into how well each manufacturer is managing idle NO_x emissions.

As discussed earlier, the PACCAR MX13 had a higher rate of NO_x emissions at idle, averaging 80 g/hr. For a sense of impact, this is over twice the NO_x emission rate of this engine when driving fully loaded (80,000 lb gross vehicle weight). Detroit Diesel, Navistar, and Volvo were all below the 30 g/hr clean-idle standard, on average, and Cummins was relatively close. Again, this should not be taken as evidence of compliance (or noncompliance) with the CARB standard, but it does demonstrate the level of positive impact that this type of regulatory action can have.

Table 4. Percentage of total NO_x emissions attributable to extended idling for each engine studied.

Percentage of Total NOx Emissions Attributable to Idle			
	Average	Max	Min
Cummins ISX15	16%	26%	7%
Detroit DD15	27%	41%	7%
Detroit DD13	12%	25%	4%
Navistar MF13	6%	15%	2%
PACCAR MX13	40%	74%	9%
Volvo D13	16%	49%	1%

Table 4 presents the average and range of NO_x emissions that was attributable to extended idling. While Figure 8 shows that some manufacturers have reasonably low emission rates at idle, the NO_x contribution from idling remains non-trivial. This suggests that the best solutions for idle are still finding alternatives to idling, such as auxiliary power units or "shore power" at rest stops.

CONCLUSIONS

In 2012, EPA conducted an in-situ study of the emissions control performance on EPA2010-level engines. The six engine families studied represented common offerings for line-haul trucking applications from all major manufacturers in the segment.

The test plan was designed to evaluate several aspects of emission control effectiveness and involved various loading and driving conditions. The data from these tests were used to determine performance over NTE-type testing as well as overall emission control effectiveness.

The first finding was that all vehicles met the NTE pass ratio criterion as described in 40 CFR Part 86. While the NTE testing regulatory provisions allow for the exclusion of NTE events for a number of reasons, the broad ability of these engines to comply while still including NTE events that could otherwise be excluded suggests that these provisions may not be fully necessary.

Next, the average NO_x emission rate during NTE events revealed that most test candidates were emitting far below a level that would correspond to the NTE threshold. The SCR-equipped test candidates all had similar average emission rates, which demonstrate the effectiveness of SCR, particularly under conditions that promote moderate to high exhaust temperatures. The emission rates of the high-EGR engines showed the limitations of this technology but were still well below a level corresponding to their applicable NTE threshold.

In addition to NTE testing, overall NO_x emission rates were calculated for each testing day. While not an official compliance metric, this analysis showed that most emission control systems were maintaining emissions at levels proportional to the emission standard (or FEL) to which they were certified, particularly for freeway operation. Under conditions that challenged the thermal state of the SCR catalyst, such as no-trailer driving and the urban test route, emission rates were highly variable across manufacturers, demonstrating the influences of both emission control technology and SCR thermal management strategies. Given that all candidates were compliant with the current emission standards and requirements, better evaluation of thermal management strategies may be a worthwhile area for future regulatory development.

Finally, the effects of extended idling were seperated out from the overall NO_x emission rates. In some cases, extended idling was responsible for a disproportionate amount of the total NO_x emissions. Idle emissions from most test articles were well-controlled and consistent with California's Clean Idle requirement, with the exception of vehicles not certified to this standard.

In summary, this study has shown that engines in this segment are performing reasonably well under real-world conditions. Challenges remain, particularly related to low-exhaust temperature conditions and extended idling, however the majority of engines are performing as expected.

FUTURE WORK

While this study has answered basic questions regarding a specific subset of engines in the heavy-duty on-highway engine segment, several questions remain.

- EPA is currently conducting a similar study on mid-sized engines in the heavy-duty segment. These engines are typically used in various vocational vehicle applications from box trucks to urban buses and represent a significant portion of the emissions inventory from the heavy-duty on-highway segment.

- The testing program presented in this paper necessarily focused on low-mileage vehicles due the recent adoption of SCR technology for these applications. Given that heavy-duty vehicles commonly accumulate over one-million miles of service over their lifetimes, EPA expects to conduct additional testing as these vehicles age.

• EPA is also contemplating expanding this test program to encompass the evaluation of CI engines installed in nonroad equipment. Manufacturers in this sector are currently in the final stages of complying with new "Tier 4" emission standards which are driving several technologies new to this sector, including SCR and non-DPF PM emission control. Evaluating how these technologies are performing in the nonroad environment is key to achieving the emissions reductions expected from the promulgation of these regulations.

• Finally, removing engines from in-service vehicles and equipment for engine dynamometer testing provides valuable comparisons with low-hour certification data. This data may be particularly useful when completed on high-mileage/hour engines, where the precision and accuracy of dynamometer testing can resolve even small changes in emissions from the low hour point.

Chris,

We're putting together what I'll describe as the big push on a definitive timeline of events - and I was hoping you might have time to talk for a bit later today? I know we spoke briefly on Friday, but there are a few specific details of the final days leading up to VW's admission to EPA of what it had done that I need to fill in. Figured you'd be the person to do that...if you're willing.

Thanks,

Subject: ABC NEWS - follow up

Chris –

Thanks for your help on Monday evening. Sorry the interview didn't air Monday evening, but we used it on Good Morning America yesterday (and it has been getting other use from us as well). It was great to have you as part of our coverage.

I wanted to follow up with you on something you told David Kerley during the interview. You mentioned a 50 page power point presentation from VW. Is that something you would be willing to share with us? We'd really like to report a little more on this, and your help would be appreciated. If it helps to send it to us, but without us identifying where we got it from, we would be fine with that.

Any help on this would be really appreciated. I think there is huge interest in this story and a real outcry to know more by the public.

Thanks,

Daniel Steinberger

Subject: Re: A few mins to talk VW timeline today?

We can do it via email as well if that'd be easier for you today, as opposed to setting up a call. For example, just want to nail down exactly when VW finally admitted what it had done. It sounds like it was a few days before the pivotal Sept 3 meeting.
And then the Sept 3 meeting itself (or was it a conf call?), who was participating from the VW side - was it folks from Germany? The US. Or both. If you can share who exactly from VW, as well as your end, was on that call...that would all be quite helpful in getting the texture of this.

Subject: FW: InsideEPA VW's Use Of NOx 'Defeat Devices' Highlights Dilemma On Diesel GHGs

Hi Evan/Rosemarie – Would you have a moment sometime beforeTuesday, September 29th to discuss this matter below? I represent emissions control manufacturers' whose devices (I think) were, in some cases, defeated by VW's design/practice.

Also, my partner Chris Hessler was just talking a few minutes ago to Mary Nichols at CARB and heard her tell some reporters that VW would only need to fix the software, at least in terms of the remedial response and certainly not relative to any financial/civil penalties. Maybe that's for California only.

Thanks, Chris

VW's Use Of NOx 'Defeat Devices' Highlights Dilemma On Diesel GHGs

Posted: September 21, 2015

The high-profile enforcement action being taken by EPA and California against Volkswagen over the company's "defeat devices" to avoid nitrogen oxide (NOx)

controls in their diesel passenger vehicles highlights the difficulty regulators face as they seek to strengthen greenhouse gas limits for the vehicles as GHG control technologies can have an unintended consequence of increasing NOx emissions.

EPA is already facing calls from California regulators and environmentalists to develop a new NOx standard to ensure there is no increase in emissions stemming from pending GHG and fuel economy requirements for heavy-duty vehicles, most of which use diesel engines.

Such efforts are likely to gain a higher profile in the wake of the VW controversy.

And the enforcement action, which is expected to result in a recall of the vehicles to remedy the problem, could make it more difficult for the company to satisfy existing GHG and NOx requirements given that the diesel cars were expected to play a substantial compliance role.

One auto industry expert says that the Volkswagen scandal underscores future problems for diesel vehicles, which are generally viewed as enjoying a historic advantage over gasoline-powered cars due to their superior fuel efficiency and lower GHG emissions. “I think it kind of calls into question the entire industry of diesel vehicles,” the analyst says. VW's actions “could have an effect on everyone in the diesel industry, whether it's big trucks or luxury vehicles -- there will be a reluctance among people to buy them.”

But an environmentalist downplays the potential that the VW situation underscores a problem for regulators to resolve the GHG-NOx dilemma. “There isn't really a problem with meeting fuel economy standards, it's really a question of one company cutting corners,” the environmentalist says. “The question that should be asked is why did VW cut corners and Daimler and BMW apparently did not?”

EPA Sept. 18 issued a Clean Air Act notice of violation to Volkswagen AG, Audi AG, and Volkswagen Group of America, Inc., alleging that as many as 482,000 Volkswagen and Audi diesel cars from model years 2009-2015 include software that circumvents EPA emissions standards for NOx and other air pollutants.

The state and federal regulators said in a Sept. 18 press release that the defeat devices are “a sophisticated software algorithm” that “detects when the car is undergoing official emissions testing, and turns full emissions controls on only during the test.”

But when the cars are operating under normal driving conditions, the defeat device is switched on and greatly reduces the operation of the emission control devices, EPA says. This results in cars that meet emissions standards in the laboratory or testing station, but during normal operation, emit NOx at up to 40 times the standard.

The California Air Resources Board (CARB) separately issued an “In-Use

Compliance" letter to Volkswagen; both agencies have initiated investigations based on Volkswagen's alleged actions.

VW officials have apologized for their action, though the company still faces as much as $18 billion in fines from EPA, as well as additional sanctions from CARB, and officials in Europe and Asia.

And *The Detroit News* reported last week that EPA and CARB "have begun procuring in-use diesel vehicles produced by other manufacturers to screen the vehicles for possible defeat devices."

New NOx Standard

While VW has not said why it installed the defeat devices, industry experts say the the software ensured that NOx control devices operated only when the vehicles' emissions were being tested but not while the vehicles were operated, ensuring improved power and performance, higher fuel economy and lower GHG emissions.

However, this resulted in the vehicles emitting 10 to 40 times the allowed NOx emissions, according to EPA.

It was not immediately clear whether all the same challenges associated with simultaneous NOx and GHG emission reductions in heavy-duty diesel engines are applicable to the light-duty engines at issue in the Volkswagen enforcement actions.

But CARB officials do not appear to be taking any chances. To address the concern, they are developing their own NOx standard and have also long planned to petition EPA to develop lower NOx emission standards for new heavy-duty diesel truck engines for rulemaking in 2018.

The petition to EPA is part of a broader strategy by CARB to convince EPA to strengthen its proposed Phase 2 GHG rules for medium- and heavy-duty trucks, while simultaneously preventing an increase in NOx, an ozone precursor.

CARB charges that EPA's proposed Phase 2 rule does not adequately control NOx emissions, which they acknowledge will rise as a result of some of the GHG controls being required by the regulations. CARB officials have argued that technology exists to enable engine makers to reduce both GHGs and NOx at the same time to meet more stringent standards.

But engine makers have charged that additional NOx reductions cannot be achieved from heavy-duty diesel engines without an associated increase in GHGs.

However, at a recent EPA listening session on its proposed heavy-duty GHG rules, a representative of engine manufacturer Cummins said the company would be willing to accept a new heavy-duty vehicle NOx rule. He noted that California has

already begun crafting such a rule, and said Cummins would be "fully committed" to a new NOx regulation as long its was a uniform national limit.

Regardless of how the regulatory effort proceeds, VW appears to be facing as much as $18 billion in fines from EPA alone, has halted sales of new versions of the vehicles and is being pressured to quickly issue a voluntary recall to fix the problem.

The vehicles subject to the EPA and CARB enforcement actions are some of the company's best known, including the Jetta (2009-2015), Beetle (2009-2015), Audi A3 (2009-2015), Golf (2009 -2015), and Passat (2014-2015) models. Their sales had allowed the company to edge Toyota as the world's largest auto manufacturer.

The auto industry expert says that in the United States, it is more difficult and expensive to certify diesel cars as meeting emission standards than it is in Europe. As a result, that is the primary reason why BMW, Mercedes and Daimler only offer diesel cars in their luxury model types. Those vehicles are equipped with expensive particulate and NOx cleaning devices that use urea, which must be replaced every 15,000 miles or so, the source says. It would be too costly to try to install these systems in the companies' less expensive smaller models, the source says.

In contrast, Volkswagen is the only company that offers diesels in a variety of its mid-size models, the source says, evidently because it has not installed the expensive urea-based, emission-control devices on those cars.

How the vehicles showed compliance with emission standards during the EPA and CARB tests when the defeat devices were turned off is unclear, the source adds. The engine may have been in a lower-horsepower mode or less fuel could have been injected into the engine, the source speculates.

While the company's actions may now result in an increase in GHG emissions after the NOx controls run permanently as required, the environmentalist is nevertheless optimistic that VW can comply through other options.

“VW is about to announce at the Frankfurt auto show 20 new models of plug-in and pure battery electric vehicles, demonstrating they too have other pathways,” the source says. -- *Curt Barry*(cbarry@iwpnews.com)

Ms. Kaul,
I'm a car guy. I love the feeling of speed, handling, an torque. I drive a race car on the track at 8 MPG (but only a few hundred miles per year). And I've driven a TDI VW which drove wonderfully. But I also have driven a Prius as my daily driver for just shy of 12 years and am very concerned about the environment and also our laws (I don't speed on public roads because I don't have to). So *don't back off and hold VW to the full extent of the law*. They have flaunted our regulations and our future and need their feet held to the fire.

Thank you for your job. Sorry to further inundate your inbox so I kept this short.

Porsche's Mueller called in to steer VW through crisis

Porsche boss Matthias Mueller once joked that he was too old to run Volkswagen but the 62-year-old now looks certain to be given the task of steering the German car maker through the worst business crisis in its history.

U.S. dealers oppose possible ouster of VW executive

Volkswagen's national dealer council and other dealers are publicly opposing the VW supervisory board's reported plans to dismiss Volkswagen of America CEO Michael Horn.

Chris –

Thanks for your help on Monday evening. Sorry the interview didn't air Monday evening, but we used it on Good Morning America yesterday (and it has been getting other use from us as well). It was great to have you as part of our coverage.

I wanted to follow up with you on something you told David Kerley during the interview. You mentioned a 50 page power point presentation from VW. Is that something you would be willing to share with us? We'd really like to report a little more on this, and your help would be appreciated. If it helps to send it to us, but without us identifying where we got it from, we would be fine with that.

Any help on this would be really appreciated. I think there is huge interest in this story and a real outcry to know more by the public.

Thanks,

Daniel Steinberger

Hello!

This is Sergey Znaemsky from Autoreview Russian Newspaper writing you. We are very thrilled by the investigation on VW defeat devices. Our newspaper https://en.wikipedia.org/wiki/Autoreview is known for series of independent crush-tests and fuel consumption tests. We run our own AR-CAP passive safety rating http://autoreview.ru/arcap/ for almost 15 years and we also evaluate cars in Russia on fuel economy with our own ARDC (Autoreview Driving Cycle) which is more relevant to real driving conditions then european NEDC and US FTP. I also need to say that our chief editor Michael Podorozhansky is the long time member of european Car of the Year Committee and our deputy-in-chief editor Leonid Golovanov is the juror of The International Engine of the Year.
So we are very interested in your conclusions regarding VW and going to evaluate diesel cars here in Russia. For this reason could you please provide us some additional info on your investigation.

The questions are below:

— How do you measure 10-40% increase in emissions when defeat device is not active? We understand that there is always a huge difference between real life consumption/emission data and test results, but this is well explained by test procedure itself (lower speed and acceleration rates). In our understanding to detect the defeat device affect you need to run vehicle in through a very similar to FTP driving cycle which has the same speeds and acceleration but somehow in different consequence to bypass the defeat device activation and reveal the difference between results with and without illegal software. Did you do so? Is 10-40% difference corresponds to this cycles or to FTP and «real-life» road driving?

— Does defeat software activate by any plugged-in testing devices or by the driving cycle itself — just when vehicle starts to warm-up and drive in accordance with FTP?

— Who is «driving» the car during your tests is it robotic driver, computer program or human driver?

— How defeat device affect the performance of the car? Can driver feel any difference in throttle response or power output?

— Did you test VW cars for defeat device activation at other testing cycles (NEDC for example)?

— Did you test other VW engines? Are you sure they don't have the same software?

— Why defeat device applied to the 2.0 TDI? Do you have any explanation why this software is used especially on this engine?

— Did you test diesels from other OEMs? There was media buzz that BMW diesels passed test and real life driving evaluation without any suspicious difference in results — is it true?

Guess that would be enough questions for the beginning)

We are waiting for your response.
Thank you in advance!

Best regards,

Sergey Znaemsky

Subject: Interview Application and Questions From Southern Weekly, a Chinese Newspaper

Dear EPA,

My name is Jiachen Yue and I am a reporter from Southern Weekly, China's most popular investigative newspaper. We are the only newspaper who interviewed U.S President Obama during his visit to China in 2009.

I noticed that Volkswagen were questioned by the U.S. Environmental Protection Agency on the matter of Exhaust Emissions Device fraud. As a newspaper continuing focus on environment issues, we would like to know more detailed information. Here is my question :

1. When and How did EPA find Volkswagen emissions fraud problem?

2. How does EPA expect Volkswagen solve this problem?

3. As far as we know, exhaust emissions devices of those involved vehicles were supplied by German Bosch Worldwide. Do you think Bosch should therefore take responsibilities?
4.What kind of influence did the Volkswagen produce to the US environment? Why didn't we find it during the past six years ?

Looking forward to your reply。My deadline is this Friday so please let me know as soon as possible.
Many thanks!

Best,

Jiachen

Obama's climate critics seize on poverty passage in Pope's speech

By Kevin Rogers

Pope Francis on Thursday urged Congress to take a "courageous and responsible" stand on climate change, but critics of President Barack Obama's climate agenda found support in his call for addressing global warming as part of "an integrated approach" that included combating poverty.

"We need a conversation which includes everyone, since the environmental challenge we are

undergoing, and its human roots, concern and affect us all," Francis told a joint meeting of Congress. "I am convinced that we can make a difference and I have no doubt that the United States — and this Congress — have an important role to play."

Quoting from his May encyclical on climate change, Francis urged "courageous actions and strategies, aimed at implementing a culture of care and 'an integrated approach to combating poverty, restoring dignity to the excluded, and at the same time protecting nature.'"

Opponents of Obama's policies picked up on those themes after the speech, saying that the president's regulatory approach to climate change will harm poor people, and noting that it also bypassed Congress.

"As the pope stated in his address, Congress has an important role to play in how the United States cares for our environment," Environment and Public Works Committee Chairman Sen. James Inhofe, R-Okla., said in a statement. "Unfortunately, President Obama has taken a different approach during his time in office."

Inhofe disputes human activity's role in climate change, and did not comment on Francis' statements that humanity is playing a role.

President Obama "has worked for the past seven years to cut Congress out of environmental policy by way of regulatory overreach with his so-called Clean Power Plan," Inhofe said.

Early in Obama's presidency, Congress took a swing at an energy bill. In 2009, the House — then in Democratic hands — advanced a bill that would set up a cap-and-trade system. It died in the Senate, which was also under Democratic control.

Obama, in an interview with Rolling Stone published this week, said he "should have moved faster to a nonlegislative strategy" on climate change after the bill failed. The administration launched its Climate Action Plan in the summer of 2013, culminating in this year's finalized power plant rules, which seek, by 2030, to cut power plant carbon emissions 32 percent from 2005 levels.

Supporters of the plan focused on the pope's call to action on climate change. Sen. Sheldon Whitehouse, D-R.I., said he hoped Francis' remarks would improve the climate change conversation among lawmakers.

"His Holiness cut through the barricade of spin and propaganda that has long surrounded Congress on climate change, to deliver a message that many of us badly needed to hear: climate change is real and we cannot wait any longer to act," he said.

"I hope that some of my colleagues, having heard the case made today and yesterday with moral clarity and without political distortion, will reconsider their positions on the issue and commit to working toward a common solution," he continued.

But Senate Majority Mitch McConnell, R-Ky., who opposes Obama's climate plan, said

Francis' remarks shouldn't be over-analyzed.

"As we turn back to the work of governing, many will interpret his words in many ways. The media certainly has. But we can also hear him as simply expressing his faith," he said on the Senate floor.

Outside of Congress, the National Mining Association, while declining to criticize Francis, said that climate policy must be tempered to offset economic harm. In a statement, the mining group said the coal industry is doing its part to provide affordable and reliable energy.

"The pope's message this week invites attention to the plight of the world's poor and the moral obligation of affluent nations to raise the living standards of those less fortunate," NMA said. "As policymakers grapple with solutions to long-term environmental challenges, they must not neglect the immediate consequences their actions may have on the living standards of many today. The challenge therefore is not to eliminate fossil fuels but to use them wisely for the millions who need them both here and abroad."

Environmental groups picked up the opposite message, however, arguing that fossil fuels need to be curbed to protect vulnerable populations from the effects of climate change.

"Faith voices around the world are speaking with one voice, and reminding the world that we have a moral responsibility to act on climate, protect vulnerable communities on the front lines of crisis, and safeguard our planet for future generations. Just months before historic climate talks in Paris, we hope leaders are listening," 350.org Executive Director May Boeve said in a statement.

North Dakota regulators extend, toughen gas flaring mandate

By The Associated Press

BISMARCK, N.D. (AP) — Energy companies are getting more time to cut down on the wasteful flaring of natural gas in North Dakota's oil fields.

In return for extending by 10 months a Jan. 1 target, state regulators have implemented a stiffer long-term benchmark.

Natural gas is a byproduct of oil production. About 20 percent is currently burned off in North Dakota because the infrastructure isn't there to move it to market. That's enough to meet the daily needs of just under 2,000 average U.S. homes.

The industry now has until Nov. 1, 2016, to meet a 15 percent benchmark, or risk production limits. In return, the 2020 benchmark will be toughened from 10 percent to between 9 and 7 percent.

Obama's personal ties with Xi yield mixed policy results

By Julie Pace

WASHINGTON (AP) — President Barack Obama has invested more time building personal ties with Chinese President Xi Jinping than with most other world leaders. But as Xi arrives in Washington late Thursday for a state visit, it's clear that Obama's overtures have produced decidedly mixed results.

During intimate walks and hours of private discussions around the world, Obama and Xi forged a historic breakthrough to combat climate change and collaborated on efforts to curb Iran's nuclear program. But there's been little progress on a pair of vexing security issues that will be at the forefront of their latest round of discussions: China's cyberspying in the U.S. and its disputed territorial claims in the Asian Pacific.

"The assumptions that many people had, that cooperation on transnational threats like climate change would ameliorate problems in geopolitical arenas were wrong," said Michael Green, White House Asian Affairs director under President George W. Bush and current senior vice president at the Center for Strategic and International Studies.

Before plunging into the pageantry of the state visit, Obama and Xi were to meet for dinner Thursday night at Blair House, the guest residence steps from the White House. They'll be joined by Vice President Joe Biden, who has also played a central role in building the administration's relationship with the Chinese leader.

Sell, sue or stay put: considerations for Volkswagen owners

By Tom Krisher and Dee-Ann Durbin

DETROIT (AP) — If you're driving a diesel-powered four-cylinder Volkswagen, you're stuck with a fun-to-drive machine that's belching unhealthy pollutants from its tailpipe.

Until the company figures out how to fix its bogus emissions controls, there isn't much you can do about your dirty diesel.

Following disclosures that Volkswagen developed software for its 2-liter diesel engine that

could better control pollutants during testing than in real-world driving, there there's a lot up in the air for owners of Jettas, Golfs, Passats and Beetles and Audi's A3.

Here are some things to consider if you're thinking of suing, selling or are unsure of what to do next.

Germany: VW cars with suspect software in Europe too

By Geir Moulson

BERLIN (AP) — The software at the center of Volkswagen's emissions scandal in the U.S. was built into the automaker's cars in Europe as well, Germany said Thursday, though it isn't yet clear if it helped cheat tests as it did in the U.S.

A day after longtime CEO Martin Winterkorn resigned over the scandal, a member of Volkswagen's supervisory board said he expects more executives to step down. The company's supervisory board meets Friday and could announce new resignations then as well as a new CEO.

The U.S. Environmental Protection Agency disclosed Friday that stealth software makes VW's 2009-2015 model cars powered by 2.0-liter diesel engines run cleaner during emissions tests than in actual driving.

The EPA accused VW of installing the so-called "defeat device" in 482,000 cars sold in the United States. VW later acknowledged that similar software exists in 11 million diesel cars worldwide and set aside 6.5 billion euros ($7.2 billion) to cover the costs of the scandal.

Caterpillar says it could cut 10,000 jobs to reduce costs

By Tom Murphy, AP Business Writer

Caterpillar is planning another round of job cuts that could exceed 10,000 people through 2018, as the construction and mining equipment maker adjusts to downturns in key markets.

That could amount to more than 8 percent of the 126,800 employees it had globally as of June.

The Peoria, Illinois, company said Thursday that it will cut as many as 5,000 people mostly

by the end of this year from its salaried and management workforce. It then could cut thousands more, raising the total above 10,000, as it figures out which factories and manufacturing sites to close through 2018.

Caterpillar also said Thursday that it was dropping its 2015 revenue outlook by $1 billion, and its profit forecast will take a hit as well.

Ex-Im fallout: GE to create 1,000 jobs in the U.K.

By The Associated Press

NEW YORK (AP) — General Electric Co. said Thursday that it may create 1,000 jobs in the United Kingdom after Congress did not renew a government program that allows foreign companies to borrow money to buy U.S. products.

Foreign companies use the U.S. Export-Import Bank to buy expensive U.S. products when bank loans are not available. It stopped new business activities on July 1, so GE says it is looking to foreign versions of the agency for funding for its customers. That typically requires creating jobs in the countries of those agencies.

The industrial company said it signed an agreement with an export credit agency in the U.K., which agreed to provide funding for potential orders from other countries. If GE wins the orders, it will create up to 1,000 new jobs in the U.K.

"In today's competitive environment, countries that have a functional export credit agency will attract investment," said GE CEO Jeff Immelt in a statement.

Indian environment minister: Less poverty is climate justice

By Katy Daigle

NEW DELHI (AP) — India will confirm plans next week for a fivefold increase in renewable energy production by 2020, the environment minister said Thursday. But it will continue to champion poor countries in demanding that industrialized nations assume the brunt of responsibility for decades of climate-warming emissions.

Describing poverty as a key source of global pollution, Prakash Javadekar told The Associated Press that nations hoping to reach a global climate pact in Paris in December had to commit to a world where all 7 billion-plus inhabitants have equal rights and access to electricity, opportunity and justice.

"Poverty is, in a way, a real polluting factor," Javadekar said, adding that India's top priority is elevating hundreds of millions of Indians still living with less than $2 a day. At the same time, expanding the economy and building infrastructure will cause carbon emissions to grow, as the country currently relies on burning coal and other fossil fuels for most of the 254 GW of electricity it generates today.

"But today, I see the carbon space occupied by the developed world," he said. "We are asking the developed world to vacate the carbon space to accommodate us. That carbon space demand is climate justice. It's our right as a nation. It's our right as people of India, and we want that carbon space."

EU: Russia-Ukraine talks on gas supplies to resume

By The Associated Press

BRUSSELS (AP) — Russia and Ukraine will resume talks Friday aimed at trying to clinch a deal guaranteeing that Ukraine will receive shipments of Russian natural gas this winter.

The European Union, which is hosting the negotiations, announced Thursday that Russia's minister for energy and Ukraine's minister for energy and coal industries will meet in Brussels.

The EU said the "firm objective" of the talks is reaching agreement on the winter gas supplies.

Russian energy minister Alexander Novak said Thursday that Ukraine has asked for a discount and that Russia will offer one, but it will be smaller than in the third quarter. "Final calculations are being prepared now, but it will be $20 on average" per 1,000 cubic meters, Novak was quoted as saying by the state news agency Tass.

Study: Global warming, evolution are clipping bees' tongues

WASHINGTON (AP) — Global warming and evolution are reshaping the bodies of some American bumblebees, a new study finds.

The tongues of two Rocky Mountains species of bumblebees are about one-quarter shorter than they were 40 years ago, evolving that way because climate change altered the buffet of wildflowers they normally feed from, according to a study published Thursday in the journal Science.

In one of these species, the tongue had been half the size of the bee's body — the equivalent of a human tongue going down to the waist. But because the flowers where the long tongue is required have dwindled, the bees didn't need that much tongue. Keeping long tongues requires bees use more energy, so the bees evolved a shorter tongue that allows them to sample a wider variety of flowers, said study lead author Nicole Miller-Struttmann at the State University of New York, Old Westbury.

While biologists have tracked how global warming has altered the developmental, migration, timing and other behavior in plants and animals, what makes this study unusual is the physical changes in the bees, said study co-author Candace Galen at the University of Missouri.

Obama's climate critics seize on poverty passage in Pope's speech

By Kevin Rogers

Pope Francis on Thursday urged Congress to take a "courageous and responsible" stand on climate change, but critics of President Barack Obama's climate agenda found support in his call for addressing global warming as part of "an integrated approach" that included combating poverty.

"We need a conversation which includes everyone, since the environmental challenge we are

undergoing, and its human roots, concern and affect us all," Francis told a joint meeting of Congress. "I am convinced that we can make a difference and I have no doubt that the United States — and this Congress — have an important role to play."

Quoting from his May encyclical on climate change, Francis urged "courageous actions and strategies, aimed at implementing a culture of care and 'an integrated approach to combating poverty, restoring dignity to the excluded, and at the same time protecting nature.'"

Opponents of Obama's policies picked up on those themes after the speech, saying that the president's regulatory approach to climate change will harm poor people, and noting that it also bypassed Congress.

"As the pope stated in his address, Congress has an important role to play in how the United States cares for our environment," Environment and Public Works Committee Chairman Sen. James Inhofe, R-Okla., said in a statement. "Unfortunately, President Obama has taken a different approach during his time in office."

Inhofe disputes human activity's role in climate change, and did not comment on Francis' statements that humanity is playing a role.

President Obama "has worked for the past seven years to cut Congress out of environmental policy by way of regulatory overreach with his so-called Clean Power Plan," Inhofe said.

Early in Obama's presidency, Congress took a swing at an energy bill. In 2009, the House — then in Democratic hands — advanced a bill that would set up a cap-and-trade system. It died in the Senate, which was also under Democratic control.

Obama, in an interview with Rolling Stone published this week, said he "should have moved faster to a nonlegislative strategy" on climate change after the bill failed. The administration launched its Climate Action Plan in the summer of 2013, culminating in this year's finalized power plant rules, which seek, by 2030, to cut power plant carbon emissions 32 percent from 2005 levels.

Supporters of the plan focused on the pope's call to action on climate change. Sen. Sheldon Whitehouse, D-R.I., said he hoped Francis' remarks would improve the climate change conversation among lawmakers.

"His Holiness cut through the barricade of spin and propaganda that has long surrounded Congress on climate change, to deliver a message that many of us badly needed to hear: climate change is real and we cannot wait any longer to act," he said.

"I hope that some of my colleagues, having heard the case made today and yesterday with moral clarity and without political distortion, will reconsider their positions on the issue and commit to working toward a common solution," he continued.

But Senate Majority Mitch McConnell, R-Ky., who opposes Obama's climate plan, said

Francis' remarks shouldn't be over-analyzed.

"As we turn back to the work of governing, many will interpret his words in many ways. The media certainly has. But we can also hear him as simply expressing his faith," he said on the Senate floor.

Outside of Congress, the National Mining Association, while declining to criticize Francis, said that climate policy must be tempered to offset economic harm. In a statement, the mining group said the coal industry is doing its part to provide affordable and reliable energy.

"The pope's message this week invites attention to the plight of the world's poor and the moral obligation of affluent nations to raise the living standards of those less fortunate," NMA said. "As policymakers grapple with solutions to long-term environmental challenges, they must not neglect the immediate consequences their actions may have on the living standards of many today. The challenge therefore is not to eliminate fossil fuels but to use them wisely for the millions who need them both here and abroad."

Environmental groups picked up the opposite message, however, arguing that fossil fuels need to be curbed to protect vulnerable populations from the effects of climate change.

"Faith voices around the world are speaking with one voice, and reminding the world that we have a moral responsibility to act on climate, protect vulnerable communities on the front lines of crisis, and safeguard our planet for future generations. Just months before historic climate talks in Paris, we hope leaders are listening," 350.org Executive Director May Boeve said in a statement.

Germany: VW cars with suspect software in Europe too

By Geir Moulson

BERLIN (AP) — The software at the center of Volkswagen's emissions scandal in the U.S. was built into the automaker's cars in Europe as well, Germany said Thursday, though it isn't yet clear if it helped cheat tests as it did in the U.S.

A day after longtime CEO Martin Winterkorn resigned over the scandal, a member of Volkswagen's supervisory board said he expects more executives to step down. The company's supervisory board meets Friday and could announce new resignations then as well as a new CEO.

The U.S. Environmental Protection Agency disclosed Friday that stealth software makes VW's 2009-2015 model cars powered by 2.0-liter diesel engines run cleaner during emissions tests than in actual driving.

The EPA accused VW of installing the so-called "defeat device" in 482,000 cars sold in the United States. VW later acknowledged that similar software exists in 11 million diesel cars worldwide and set aside 6.5 billion euros ($7.2 billion) to cover the costs of the scandal.

Caterpillar says it could cut 10,000 jobs to reduce costs

By Tom Murphy, AP Business Writer

Caterpillar is planning another round of job cuts that could exceed 10,000 people through 2018, as the construction and mining equipment maker adjusts to downturns in key markets.

That could amount to more than 8 percent of the 126,800 employees it had globally as of June.

The Peoria, Illinois, company said Thursday that it will cut as many as 5,000 people mostly

by the end of this year from its salaried and management workforce. It then could cut thousands more, raising the total above 10,000, as it figures out which factories and manufacturing sites to close through 2018.

Caterpillar also said Thursday that it was dropping its 2015 revenue outlook by $1 billion, and its profit forecast will take a hit as well.

Ex-Im fallout: GE to create 1,000 jobs in the U.K.

By The Associated Press

NEW YORK (AP) — General Electric Co. said Thursday that it may create 1,000 jobs in the United Kingdom after Congress did not renew a government program that allows foreign companies to borrow money to buy U.S. products.

Foreign companies use the U.S. Export-Import Bank to buy expensive U.S. products when bank loans are not available. It stopped new business activities on July 1, so GE says it is looking to foreign versions of the agency for funding for its customers. That typically requires creating jobs in the countries of those agencies.

The industrial company said it signed an agreement with an export credit agency in the U.K., which agreed to provide funding for potential orders from other countries. If GE wins the orders, it will create up to 1,000 new jobs in the U.K.

"In today's competitive environment, countries that have a functional export credit agency will attract investment," said GE CEO Jeff Immelt in a statement.

Indian environment minister: Less poverty is climate justice

By Katy Daigle

NEW DELHI (AP) — India will confirm plans next week for a fivefold increase in renewable energy production by 2020, the environment minister said Thursday. But it will continue to champion poor countries in demanding that industrialized nations assume the brunt of responsibility for decades of climate-warming emissions.

Describing poverty as a key source of global pollution, Prakash Javadekar told The Associated Press that nations hoping to reach a global climate pact in Paris in December had to commit to a world where all 7 billion-plus inhabitants have equal rights and access to electricity, opportunity and justice.

"Poverty is, in a way, a real polluting factor," Javadekar said, adding that India's top priority is elevating hundreds of millions of Indians still living with less than $2 a day. At the same time, expanding the economy and building infrastructure will cause carbon emissions to grow, as the country currently relies on burning coal and other fossil fuels for most of the 254 GW of electricity it generates today.

"But today, I see the carbon space occupied by the developed world," he said. "We are asking the developed world to vacate the carbon space to accommodate us. That carbon space demand is climate justice. It's our right as a nation. It's our right as people of India, and we want that carbon space."

EU: Russia-Ukraine talks on gas supplies to resume

By The Associated Press

BRUSSELS (AP) — Russia and Ukraine will resume talks Friday aimed at trying to clinch a deal guaranteeing that Ukraine will receive shipments of Russian natural gas this winter.

The European Union, which is hosting the negotiations, announced Thursday that Russia's minister for energy and Ukraine's minister for energy and coal industries will meet in Brussels.

The EU said the "firm objective" of the talks is reaching agreement on the winter gas supplies.

Russian energy minister Alexander Novak said Thursday that Ukraine has asked for a discount and that Russia will offer one, but it will be smaller than in the third quarter. "Final calculations are being prepared now, but it will be $20 on average" per 1,000 cubic meters, Novak was quoted as saying by the state news agency Tass.

Study: Global warming, evolution are clipping bees' tongues

WASHINGTON (AP) — Global warming and evolution are reshaping the bodies of some American bumblebees, a new study finds.

The tongues of two Rocky Mountains species of bumblebees are about one-quarter shorter than they were 40 years ago, evolving that way because climate change altered the buffet of wildflowers they normally feed from, according to a study published Thursday in the journal Science.

In one of these species, the tongue had been half the size of the bee's body — the equivalent of a human tongue going down to the waist. But because the flowers where the long tongue is required have dwindled, the bees didn't need that much tongue. Keeping long tongues requires bees use more energy, so the bees evolved a shorter tongue that allows them to sample a wider variety of flowers, said study lead author Nicole Miller-Struttmann at the State University of New York, Old Westbury.

While biologists have tracked how global warming has altered the developmental, migration, timing and other behavior in plants and animals, what makes this study unusual is the physical changes in the bees, said study co-author Candace Galen at the University of Missouri.

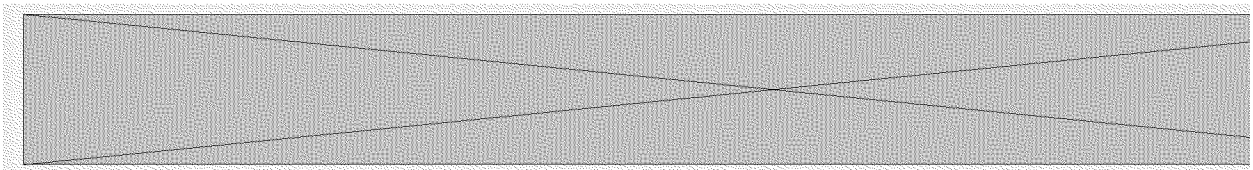
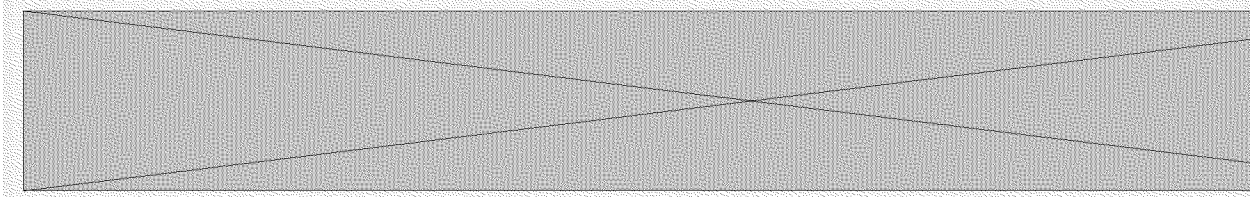
Subject: Overnight Energy & Environment: Pope takes green message to Congress





POPE TALKS CLIMATE: Pope Francis stressed his calls for action on climate change in his speech to Congress Thursday.

America has the lowest gasoline prices anywhere in the world. That boosts household budgets by billions of dollars. See how exporting crude would lead to higher fuel prices and hurt our economy. http://crudecoalition.org/resources/studies/

SPONSOR-GENERATED CONTENT

Francis repeatedly referred to his encyclical from June on climate change and tried to enlist lawmakers to help him in his fight.

"In Laudato Si', I call for a courageous and responsible effort to redirect our steps and to avert the most serious effects of the environmental deterioration caused by human activity," Francis said.

"I am convinced that we can make a difference and I have no doubt that the United States -- and this Congress -- have an important role to play."

The declarations got loud, standing applause from Democrats, but only a handful of Republicans applauded Francis on climate change.

The speech follows numerous high-profile calls for climate action from Francis, including Wednesday at the White House and his encyclical.

Read more here.

BUT WHERE'S GOSAR?: Rep. Paul Gosar (R-Ariz.) lived up to his promise and didn't

attend Francis's speech, but watched it from his office instead.

Gosar pledged to boycott the speech due to his expectation that Francis would talk about climate change, and he had no regrets about missing it.

"I think I made my point, and I think the point needed to be made," Gosar said, adding that Francis should focus on more important issues like Islamic extremism and abortion.

"He was very specific about climate change, a lot more dynamic on that regard than in right to life," Gosar said. "He made one sentence and then transitioned it right into trying to advocate against the death penalty."

Read more here.

ON TAP FRIDAY I: Pope Francis, now in New York City, will speak Friday at the United Nations General Assembly. He is likely to speak about climate change.

ON TAP FRIDAY II: The Center for Strategic and International Studies will host a discussion on the global market for liquefied natural gas. Fereidun Fesharaki, founder of energy consulting firm FGE, will be the featured speaker.

AROUND THE WEB: Kimray Inc., which manufactures oilfield equipment, is offering buyouts to all 700 employees at its Oklahoma City headquarters, The Oklahoman reports.

In the second quarter, renewable electricity generation overtook coal in the United Kingdom for the first time, the Telegraph reports.

All primary and secondary schools across Singapore are closed Friday due to haze, the Straits Times reports.

Nick,

Ah, thanks for letting me know.

One quick question though if you're able to answer this one: the back-and-forth between EPA/CARB and VW in late Aug and early Sept before the company admitted what it did on Sept 3.... were those conversations with VW officials from Germany, or from the US?

Subject: Autoreview Newspaper Request: VW defeat device

Dear Cristine,

Dear Kaul,

Hello!

This is Sergey Znaemsky from Autoreview Russian Newspaper writing you. We are very thrilled by the investigation on VW defeat devices. Our newspaper https://en.wikipedia.org/wiki/Autoreview is known for series of independent crush-tests and fuel consumption tests. We run our own AR-CAP passive safety rating http://autoreview.ru/arcap/ for almost 15 years and we also evaluate cars in Russia on fuel economy with our own ARDC (Autoreview Driving Cycle) which is more relevant to real driving conditions then european NEDC and US FTP. I also need to say that our chief editor Michael Podorozhansky is the long time member of european Car of the Year Committee and our deputy-in-chief editor Leonid Golovanov is the juror of The International Engine of the Year.

So we are very interested in your conclusions regarding VW and going to evaluate diesel cars here in Russia. For this reason could you please provide us some additional info on your investigation.

The questions are below:

— How do you measure 10-40% increase in emissions when defeat device is not active? We understand that there is always a huge difference between real life consumption/emission data and test results, but this is well explained by test procedure itself (lower speed and acceleration rates). In our understanding to detect the defeat device affect you need to run vehicle in through a very similar to FTP driving cycle which has the same speeds and acceleration but somehow in different consequence to bypass the defeat device activation and reveal the difference between results with and without illegal software. Did you do so? Is 10-40% difference corresponds to this cycles or to FTP and «real-life» road driving?

— Does defeat software activate by any plugged-in testing devices or by the driving cycle itself — just when vehicle starts to warm-up and drive in accordance with FTP?

— Who is «driving» the car during your tests is it robotic driver, computer program or human driver?

— How defeat device affect the performance of the car? Can driver feel any difference in throttle response or power output?

— Did you test VW cars for defeat device activation at other testing cycles (NEDC for example)?

— Did you test other VW engines? Are you sure they don't have the same software?

— Why defeat device applied to the 2.0 TDI? Do you have any explanation why this software is used especially on this engine?

— Did you test diesels from other OEMs? There was media buzz that BMW diesels passed test and real life driving evaluation without any suspicious difference in results — is it true?

Guess that would be enough questions for the beginning)

We are waiting for your response.

Thank you in advance!

Best regards,

Sergey Znaemsky

Thank you for contacting the Office of Transportation and Air Quality (OTAQ). We are processing your inquiry; you should receive a response within 5 business days.

The following information may help you reach a more specific direct contact for information you are seeking.

Frequently asked questions - OTAQ has a "Frequent Questions" site where you can search for answers on transportation and air quality issues at: http://www.epa.gov/otaq/about/faq.htm.

Importing a vehicle to the U.S. - See our Imports site for information about imports at: www.epa.gov/otaq/imports or call the Imports Hotline at 734-214-4100.

Car or light-truck safety issues - Call the Department of Transportation Hotline at 1-800-424-9393.

Recycling or disposal of antifreeze, batteries, oil, or tires - See EPA's Office of Resource Conservation and Recovery web site for information about recycling and disposing of wastes at: www.epa.gov/wastes.

Finding a specific document - Most of our documents are on our Web site at: www.epa.gov/otaq. If you cannot find the document on our site, you can get many publications, free of charge, through the National Service Center for Environmental Publications by calling: 1-800-490-9198. If you are looking for a specific document that you can't find, please contact the NVFEL library at 734-214-4311 or email AALibrary@epa.gov.

For tracking purposes, please ensure the following line is included when replying.

Ms. Kaul,

I'm a car guy. I love the feeling of speed, handling, an torque. I drive a race car on the track at 8 MPG (but only a few hundred miles per year). And I've driven a TDI VW which drove wonderfully. But I also have driven a Prius as my daily driver for just shy of 12 years and am very concerned about the environment and also our laws (I don't speed on public roads because I don't have to). So *don't back off and hold VW to the full extent of the law*. They have flaunted our regulations and our future and need their feet held to the fire.

Thank you for your job. Sorry to further inundate your inbox so I kept this short.

Subject: 8 biggest automotive scandals of all time
MAIL_CONVERSATION_TOPIC: 8 biggest automotive scandals of all time
Created: Fri 3/18/2016 6:18:10 PM

Caught up in the midst of it all, Volkswagen's recent diesel emissions scandal seems historically bad. The company has apologized, and is carrying on business as usual, but this kind of widespread, systemic disregard for the law is bad news for the world's new largest automaker. But despite the impending fines, sanctions, and legal action, this is hardly the first or the most deadly automotive scandal. In fact, there are several more (some in recent memory) that challenge "dieselgate" for scope and organizational incompetence. If you're looking for a thorough takedown of "Government Motors" or any of the post-recession bailouts, look elsewhere. Join us as we take a look back at eight of the biggest mechanical scandals the automotive world has ever seen. Unsafe at Any Speed: The demise of the Chevrolet Corvair Chevrolet's infamous Corvair was an automotive anomaly at the time. With a rear-mounted flat-6-cylinder engine, it was essentially an American Porsche. But almost no one remembers the Corvair as a quirky, bow-tied sports sedan, because in 1965, consumer protection activist Ralph Nader released his book Unsafe at Any Speed, a thorough takedown of the safety-related shortcomings of the American auto industry, and the Corvair was at the crux of his campaign. Due to an inherently unstable swing axle suspension design, a tire-pressure differential system designed to induce understeer and combat oversteer, and the removal of a front anti-sway bar by Chevrolet engineering management, Nader dubbed the Corvair "the leading candidate for the un-safest-car title." Sales immediately dropped from almost 220,000 in 1965 to less than 15,000 in 1968, and the subsequent public outrage prompted the signing of the National Traffic and Motor Vehicle Safety Act in 1966. 'The barbecue that seats four': the Ford Pinto fuel tank debacle If you remember driving in the 1970s and 80s, there was one rule of the road that everyone seemed to follow: steer clear if you see a Pinto. Ford's wildly-popular economy car sold extremely well after the fuel crisis of the early 70s, thanks to its space-efficient design, above-average gas mileage, and low purchase price. But Ford was hiding a deadly secret – one that makes emissions test cheating seem like an honest mistake. The National Highway Traffic Safety Administration (NHTSA) investigated the Pinto from 1974 onward, taking action in 1977 after finding that the Pinto's fuel tank could rupture in a crash, resulting in deadly fires from spilled fuel. The tank sat between the rear axle and the rear bumper, and the fuel filler neck could break in a rear end collision. The NHTSA also found that not only did Ford know about this problem, but they deliberately neglected to engineer a redesign after conducting a cost-benefit analysis that determined that it was cheaper to pay off possible lawsuits than to pay for a fix for the problem. If that's not worse than cheating on emissions tests, we don't know what is. Four rings floored:60 Minutesand Audi's 'unintended acceleration' problem Audi almost didn't make it into the 21st century in America thanks to one poorly-reported special on 60 Minutes. During the period of 1982 to 1987, Audi issued recalls for a series of 5000 models with reported incidents of unintended acceleration that would occur suddenly. The incidents were reportedly linked to six deaths and almost 700 accidents. The NHTSA was also investigating another 50 models from 20 different manufacturers for the same problem, but the folks at 60 Minutes didn't bother or care to check that out. In a special called "Out of Control" that aired in 1986, 60 Minutes interviewed six people that had sued Audi for the unintended acceleration. They even went so far as to create a dramatic reenactment of the incident, but

failed to disclose that they had engineered the car to replicate the behavior for the special. Audi eventually issued a recall to spread the pedals further apart, even though "user error" was determined to be the cause of the incidents. Audi is lucky that they recovered from the "scandal," but have now become one of the strongest and most popular German brands. Separation anxiety: Firestone Tires and the Ford Explorer Ford and Firestone had a close relationship almost from their respective founding. As the largest American automaker and the largest tire company, they had a lucrative relationship for the majority of the 20th century, even being linked in marriage by William Clay Ford Sr. and Martha Parke Firestone in 1947. But in May of 2000, everything changed. Firestone already had a tarnished reputation from a 1970s scandal that involved their 500 radial tires and a tendency for tread separation, so when the NHTSA contacted both Ford and Firestone about a high rate of tire failure on Explorer, Mercury Mountaineer and Mazda Navajo models, the future seemed very bleak. Ford investigated the problem, and found that 15-inch tires had very high tread separation rates, especially those made in Decatur, IL. The tires could rupture at speed, causing an estimated 250 deaths and thousands of injuries. Ford was able to place most of the blame on Firestone, but the Explorer was especially prone to rollover accidents thanks to its top-heavy design. The pair of companies faced many lawsuits, and Firestone recalled 2.8 million tires. Nowadays, Ford partners with Bridgestone for most of their new tires. Braking news: Toyota and Lexus's runaway car problem It started off small for Japan's largest automaker, but what seemed like a minor issue quickly ballooned into a massive recall. From 2002 to 2009, many defect petitions were made to the NHTSA regarding Toyota and Lexus models' tendency to unintentionally accelerate, but most were determined to be the cause of user error. Toyota issued a minor fix by bringing in all of the affected cars and asking owners to switch out all-weather mats to keep the pedals clear. Then, in August of 2009, California Highway Patrol officer Mark Saylor was traveling with his family in San Diego in a loaner Lexus ES350 when the car lost all brake function and accelerated out of control as Saylor was passing a truck on the highway. Everyone in the vehicle was killed, and the crash gained national coverage. From that point onwards, Toyota issued 7 separate recalls that totaled almost 10 million vehicles, for which they switched out floor mats and carpet covers that caused "pedal entrapment." But the problem was far from fixed, and in 2013, a former Toyota employee released a personal statement that accused Toyota of covering up facts and tricking government officials. The Justice Department investigated the issue from 2010 onwards, and handed Toyota a $1.2 billion penalty for issuing misleading statements to the NHTSA. Toyota also had to pay another $1.2 billion dollars in a class action lawsuit to Toyota drivers that claimed their vehicles lost value from the scandal. Talk about a sticky situation! Ignition condition: GM's ignition switch fiasco If you've followed automotive news at all over the last year and a half, chances are you're very familiar with this particular scandal already. In February of 2014, General Motors recalled about 800,000 Chevrolet Cobalt and Pontiac G5 models for a problem with the ignition switch that could cause the engine to shut off while driving, thereby preventing airbags from inflating and all power-assisted systems from functioning. The problem ballooned to congressional action, and resulted in the recall of nearly 30 million vehicles worldwide. GM CEO Mary Barra was forced into the firestorm, which has resulted in up to 169 deaths. GM was aware of the problem at least a decade before the recall, but Barra and company were largely able to deflect the blame on the ways of "old GM" before the government bailout. Despite a $900 million fine and an additional $575 million in civil lawsuit compensation, GM's sales and product lineup are stronger than ever. It seems the American car buying public has a very limited short term

memory. Airbag blowout: Honda and Takata's record-setting recall The Takata airbag recall has been the largest in history, with close to 34 million vehicles recalled worldwide that use the defective airbags. In the center of this scandal, however, is Honda, who owned a controlling stake in Takata until recently, and took much of the brunt of the media's coverage of the scandal. According to Takata, the faulty airbags are related to more than 100 injuries and 8 deaths among Hondas alone, and countless more among other automakers including BMW, Chrysler, Ford, Mazda, Nissan, General Motors, and Toyota. If it weren't for the other automakers affected, Honda may have had it much worse in the public eye, but this scandal (coupled with falling profits) recently cost the job of their CEO. V-Trouble-U: the ongoing Volkswagen diesel scandal As details come flooding out of what's being called one of the biggest automotive scandals ever, things are getting worse and worse for Volkswagen. As I type this, CEO Martin Winterkorn has resigned from his post, but VW's troubles are far from over. According to a report, the "defeat device" that was programmed into the diesel cars' ECU to detect when emissions tests were being performed and to adjust emission levels accordingly has been known about for over a year. We've learned a lot about the "how" and the general scope of the deception, but the big question on everyone's mind is simple: why? I suppose we'll find out in time.

Subject: Interview Application and Questions From Southern Weekly, a Chinese Newspaper

Dear EPA,

My name is Jiachen Yue and I am a reporter from Southern Weekly, China's most popular investigative newspaper. We are the only newspaper who interviewed U.S President Obama during his visit to China in 2009.

I noticed that Volkswagen were questioned by the U.S. Environmental Protection Agency on the matter of Exhaust Emissions Device fraud. As a newspaper continuing focus on environment issues, we would like to know more detailed information. Here is my question :

1. When and How did EPA find Volkswagen emissions fraud problem?

2. How does EPA expect Volkswagen solve this problem?

3. As far as we know, exhaust emissions devices of those involved vehicles were supplied by German Bosch Worldwide. Do you think Bosch should therefore take responsibilities?

4.What kind of influence did the Volkswagen produce to the US environment? Why didn't we find it during the past six years ?

Looking forward to your reply。My deadline is this Friday so please let me know as soon as possible.
Many thanks!

Best,

Jiachen

My team is absolutely running full speed on our Volkswagen investigation at the moment with some products we want to finish internally by Friday morning. We will be in a better position to listen attentively and learn from your clients if we do the call Friday afternoon. I can offer any

time after 1:00 PM on Friday.

Alternatively, we could consider an in person meeting in China the week of October 19. I am planning to be in Beijing that week if an hour meeting in person would be more productive.

I am sorry for this late notice, but I had not appreciated the pace we would need to keep to move our VW work effectively.

Thanks,

Byron

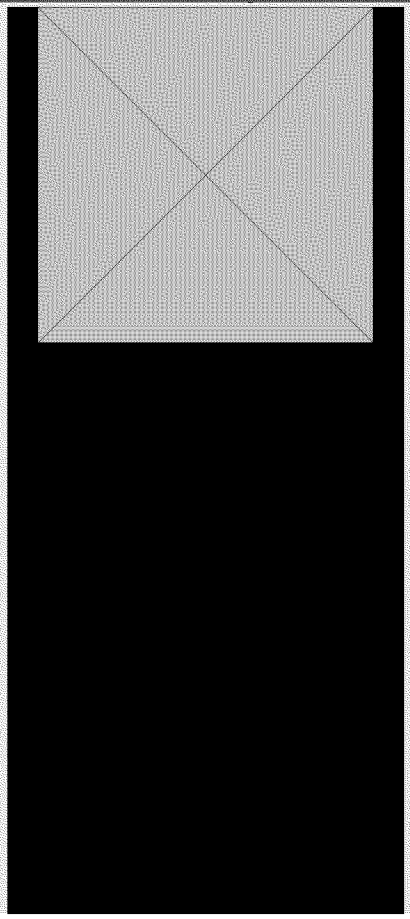
Problems at Volkswagen Start in the Boardroom



Problems at Volkswagen Start in the Boardroom

An insular governing structure, overseen by family members and labor, allowed the current scandal over the flouting of emissions standards to happen.

MAIL_CONVERSATION_TOPIC: 8 biggest automotive scandals of all time
Created: Fri 3/18/2016 6:18:09 PM

Caught up in the midst of it all, Volkswagen's recent diesel emissions scandal seems historically bad. The company has apologized, and is carrying on business as usual, but this kind of widespread, systemic disregard for the law is bad news for the world's new largest automaker. But despite the impending fines, sanctions, and legal action, this is hardly the first or the most deadly automotive scandal. In fact, there are several more (some in recent memory) that challenge "dieselgate" for scope and organizational incompetence. If you're looking for a thorough takedown of "Government Motors" or any of the post-recession bailouts, look elsewhere. Join us as we take a look back at eight of the biggest mechanical scandals the automotive world has ever seen. Unsafe at Any Speed: The demise of the Chevrolet Corvair Chevrolet's infamous Corvair was an automotive anomaly at the time. With a rear-mounted flat-6-cylinder engine, it was essentially an American Porsche. But almost no one remembers the Corvair as a quirky, bow-tied sports sedan, because in 1965, consumer protection activist Ralph Nader released his book Unsafe at Any Speed, a thorough takedown of the safety-related shortcomings of the American auto industry, and the Corvair was at the crux of his campaign. Due to an inherently unstable swing axle suspension design, a tire-pressure differential system designed to induce understeer and combat oversteer, and the removal of a front anti-sway bar by Chevrolet engineering management, Nader dubbed the Corvair "the leading candidate for the un-safest-car title." Sales immediately dropped from almost 220,000 in 1965 to less than 15,000 in 1968, and the subsequent public outrage prompted the signing of the National Traffic and Motor Vehicle Safety Act in 1966. 'The barbecue that seats four': the Ford Pinto fuel tank debacle If you remember driving in the 1970s and 80s, there was one rule of the road that everyone seemed to follow: steer clear if you see a Pinto. Ford's wildly-popular economy car sold extremely well after the fuel crisis of the early 70s, thanks to its space-efficient design, above-average gas mileage, and low purchase price. But Ford was hiding a deadly secret – one that makes emissions test cheating seem like an honest mistake. The National Highway Traffic Safety Administration (NHTSA) investigated the Pinto from 1974 onward, taking action in 1977 after finding that the Pinto's fuel tank could rupture in a crash, resulting in deadly fires from spilled fuel. The tank sat between the rear axle and the rear bumper, and the fuel filler neck could break in a rear end collision. The NHTSA also found that not only did Ford know about this problem, but they deliberately neglected to engineer a redesign after conducting a cost-benefit analysis that determined that it was cheaper to pay off possible lawsuits than to pay for a fix for the problem. If that's not worse than cheating on emissions tests, we don't know what is. Four rings floored:60 Minutesand Audi's 'unintended acceleration' problem Audi almost didn't make it into the 21st century in America thanks to one poorly-reported special on 60 Minutes. During the period of 1982 to 1987, Audi issued recalls for a series of 5000 models with reported incidents of unintended acceleration that would occur suddenly. The incidents were reportedly linked to six deaths and almost 700 accidents. The NHTSA was also investigating another 50 models from 20 different manufacturers for the same problem, but the folks at 60 Minutes didn't bother or care to check that out. In a special called "Out of Control" that aired in 1986, 60 Minutes interviewed six people that had sued Audi for the unintended acceleration. They even went so far as to create a dramatic reenactment of the incident, but

failed to disclose that they had engineered the car to replicate the behavior for the special. Audi eventually issued a recall to spread the pedals further apart, even though "user error" was determined to be the cause of the incidents. Audi is lucky that they recovered from the "scandal," but have now become one of the strongest and most popular German brands. Separation anxiety: Firestone Tires and the Ford Explorer Ford and Firestone had a close relationship almost from their respective founding. As the largest American automaker and the largest tire company, they had a lucrative relationship for the majority of the 20th century, even being linked in marriage by William Clay Ford Sr. and Martha Parke Firestone in 1947. But in May of 2000, everything changed. Firestone already had a tarnished reputation from a 1970s scandal that involved their 500 radial tires and a tendency for tread separation, so when the NHTSA contacted both Ford and Firestone about a high rate of tire failure on Explorer, Mercury Mountaineer and Mazda Navajo models, the future seemed very bleak. Ford investigated the problem, and found that 15-inch tires had very high tread separation rates, especially those made in Decatur, IL. The tires could rupture at speed, causing an estimated 250 deaths and thousands of injuries. Ford was able to place most of the blame on Firestone, but the Explorer was especially prone to rollover accidents thanks to its top-heavy design. The pair of companies faced many lawsuits, and Firestone recalled 2.8 million tires. Nowadays, Ford partners with Bridgestone for most of their new tires. Braking news: Toyota and Lexus's runaway car problem It started off small for Japan's largest automaker, but what seemed like a minor issue quickly ballooned into a massive recall. From 2002 to 2009, many defect petitions were made to the NHTSA regarding Toyota and Lexus models' tendency to unintentionally accelerate, but most were determined to be the cause of user error. Toyota issued a minor fix by bringing in all of the affected cars and asking owners to switch out all-weather mats to keep the pedals clear. Then, in August of 2009, California Highway Patrol officer Mark Saylor was traveling with his family in San Diego in a loaner Lexus ES350 when the car lost all brake function and accelerated out of control as Saylor was passing a truck on the highway. Everyone in the vehicle was killed, and the crash gained national coverage. From that point onwards, Toyota issued 7 separate recalls that totaled almost 10 million vehicles, for which they switched out floor mats and carpet covers that caused "pedal entrapment." But the problem was far from fixed, and in 2013, a former Toyota employee released a personal statement that accused Toyota of covering up facts and tricking government officials. The Justice Department investigated the issue from 2010 onwards, and handed Toyota a $1.2 billion penalty for issuing misleading statements to the NHTSA. Toyota also had to pay another $1.2 billion dollars in a class action lawsuit to Toyota drivers that claimed their vehicles lost value from the scandal. Talk about a sticky situation! Ignition condition: GM's ignition switch fiasco If you've followed automotive news at all over the last year and a half, chances are you're very familiar with this particular scandal already. In February of 2014, General Motors recalled about 800,000 Chevrolet Cobalt and Pontiac G5 models for a problem with the ignition switch that could cause the engine to shut off while driving, thereby preventing airbags from inflating and all power-assisted systems from functioning. The problem ballooned to congressional action, and resulted in the recall of nearly 30 million vehicles worldwide. GM CEO Mary Barra was forced into the firestorm, which has resulted in up to 169 deaths. GM was aware of the problem at least a decade before the recall, but Barra and company were largely able to deflect the blame on the ways of "old GM" before the government bailout. Despite a $900 million fine and an additional $575 million in civil lawsuit compensation, GM's sales and product lineup are stronger than ever. It seems the American car buying public has a very limited short term

memory. Airbag blowout: Honda and Takata's record-setting recall The Takata airbag recall has been the largest in history, with close to 34 million vehicles recalled worldwide that use the defective airbags. In the center of this scandal, however, is Honda, who owned a controlling stake in Takata until recently, and took much of the brunt of the media's coverage of the scandal. According to Takata, the faulty airbags are related to more than 100 injuries and 8 deaths among Hondas alone, and countless more among other automakers including BMW, Chrysler, Ford, Mazda, Nissan, General Motors, and Toyota. If it weren't for the other automakers affected, Honda may have had it much worse in the public eye, but this scandal (coupled with falling profits) recently cost the job of their CEO. V-Trouble-U: the ongoing Volkswagen diesel scandal As details come flooding out of what's being called one of the biggest automotive scandals ever, things are getting worse and worse for Volkswagen. As I type this, CEO Martin Winterkorn has resigned from his post, but VW's troubles are far from over. According to a report, the "defeat device" that was programmed into the diesel cars' ECU to detect when emissions tests were being performed and to adjust emission levels accordingly has been known about for over a year. We've learned a lot about the "how" and the general scope of the deception, but the big question on everyone's mind is simple: why? I suppose we'll find out in time.

EU Urges Member States To Investigate VW Emissions Fraud

The European Commission on Thursday urged member states to conduct investigations into the use of defeat device software used to bypass air pollution emissions standards in the wake of recent allegations that Volkswagen AG has been cheating emissions tests with its diesel engines.

EPA Proposes Rule To Stop Pharmaceutical Flushing

The U.S. Environmental Protection Agency proposed a ban on Thursday on flushing hazardous waste pharmaceuticals down the drain, a move the EPA said is intended to protect waterways, including drinking and surface water.

BP Asks 5th Circ. To OK Deepwater Settlement Calculations

BP asked the Fifth Circuit on Wednesday to affirm a so-called accrual-style framework when calculating the settlement it will pay a class of Gulf Coast businesses harmed by 2010's Deepwater Horizon disaster, claiming that the court had previously suggested the formula to determine the businesses' lost profits.

Tribes Told To Shore Up Bid For $9M Costs In Pollution Suit

A Washington federal judge on Wednesday ordered tribes embroiled in a dispute with a Canadian mining company over metal waste pollution in the Columbia River to turn over additional documents to support their request for $9.1 million in costs, saying it's necessary to ensure they're not receiving double recovery.

Nev. Counties, Mining Cos. Sue DOI Over Sage-Grouse Plans

Two Nevada counties and two mining companies on Wednesday sued the federal government over resource management plans for the Great Basin region intended in part to help preserve the greater sage-grouse, arguing it failed to accommodate the need for mineral resources.

More than half of U.S. states, including California, Texas and New York, said Thursday they launched a multistate investigation of Volkswagen to determine if the embattled automaker deceived consumers by selling "clean diesel" cars with software designed to circumvent emissions tests, according to Texas Attorney General Ken Paxton.

POLICY & REGULATION

Sens. Revive Bill To Cut Methane, Short-Lived GHG Emissions

U.S. Sens. Chris Murphy, D-Conn., and Susan Collins, R-Maine, have reintroduced legislation aimed at reducing short-lived but potent greenhouse gas emissions, including methane leaking from oil and gas operations.

EPA Floats New Regulations For Hazardous Waste Shipments

The U.S. Environmental Protection Agency on Thursday proposed boosting its oversight of hazardous waste shipments to help ensure that hazardous waste that's imported into and exported from the U.S. is being safely transported.

Nordea Bans VW Stocks, Bonds For 6 Months Amid Scandal

Nordea Asset Management has banned fund managers from investing in Volkswagen AG stocks and bonds for six months, a spokeswoman confirmed Thursday, marking the latest setback for the beleaguered auto company contending with allegations it knowingly engineered its diesel engines to cheat emissions standards.

ENFORCEMENT

Ex-Massey Energy CEO Can't Delay Criminal Trial

A West Virginia federal judge on Thursday rejected a bid by former Massey Energy CEO Don Blankenship to delay the looming Oct. 1 trial until January, saying Blankenship didn't provide a good reason to warrant a rescheduling.

Virgin Islands Utility Will Spend $13.5M To Fix Plant Violations

The municipal utility serving the U.S. Virgin Islands will pay a $1.3 million penalty and spend $12.2 million on compliance upgrades to resolve allegations that two of its power plants flouted federal air pollution limits, the U.S. Environmental Protection Agency said Thursday.

EPA Cites Pesticide Maker For Marketing Violations

The U.S. Environmental Protection Agency said Thursday that a Philadelphia-based chemical maker has been improperly marketing an insecticide by failing to include its "restricted use" designation in marketing materials.

The U.S. Environmental Protection Agency and Pennsylvania's Department of Environmental Protection on Thursday inked a settlement for a lawsuit alleging that Indspec Chemical Corp. violated the Clear Air Act by improperly monitoring the emission of hazardous air pollutants from its production of the chemical resorcinol.

LITIGATION

Dealers Hit VW With Latest Suit In Diesel-Emissions Scandal

Independent auto dealers hit Volkswagen Group of America Inc. with a proposed class action in California federal court on Thursday, jumping into litigation stemming from the company's alleged engineering of diesel engines to beat emissions standards.

Biofuel Group Asks DC Circ. To Modify Test Fuel Opinion

A biofuel advocacy group renewed its bid Thursday for the D.C. Circuit to modify its opinion regarding the U.S. Environmental Protection Agency's rules requiring test fuels be commercially available before they can be approved, arguing the agency's discretion will be better preserved if the opinion is amended.

Enviros Sue For Gov't Info On Crude Oil Exports

Conservation groups on Thursday sued the Obama administration for allegedly refusing to release information about recent crude oil export authorizations.

9th Circ. Asked To Revive Suit Over $3.3B Nuke Plant Charges

Consumers accusing the California Public Utilities Commission of wrongly charging them $3.3 billion for a nuclear plant's defective steam generators urged the Ninth Circuit to revive their suit Wednesday because they had not received fair notice and hearing in advance of the utility's decision.

US Ducks Waste Co.'s $1M Suit Over Tainted Oil

A Colorado federal court Wednesday dismissed a waste management company's suit seeking compensation for a U.S. Air Force shipment of tainted oil that allegedly caused more than $1 million in damage and cleanup.

Sierra Club Gets OK To Intervene In Luminant Clean Air Suit

A Texas federal judge on Wednesday granted the Sierra Club the right to intervene in a Clean Air Act suit lodged against Energy Future Holdings subsidiary Luminant Generation Co. by the federal government, while also setting some restrictions on its involvement.

NJ Lawmakers Decry DEP's Water Regulation Changes

and coastal management areas, echoing environmentalists who contend the updates would weaken water quality protections.

Occidental Says Texas Law Doesn't Apply To Sinkhole Suit

Occidental Chemical Corp. told a Texas federal court on Thursday that its dispute with Liberty Insurance Underwriters Inc. over liability for a massive sinkhole is not governed by Texas law because the Houston-based chemical manufacturer was incorporated in New York.

HollyFrontier Allegedly Owes $14M For Refinery Cleanup

HollyFrontier allegedly lied about the existence of lead contamination at an oil refinery before selling it and now refuses to pay $14 million to help the refinery's current owner clean it up, according to a complaint filed in Montana federal court.

IRS Gives Brush-Off To 8th Circ. Conservation Pay Ruling

The Internal Revenue Service on Thursday said the Eighth Circuit misinterpreted federal guidance in a holding last year that the payments a nonfarmer couple received under a federal conservation program were not taxable as self-employment income and recommended its lawyers not follow the decision in other courts.

EXPERT ANALYSIS

Methods To Minimize CERCLA Liability: Part 2

Companies served with potentially responsible party letters by the U.S. Environmental Protection Agency or state agencies threatening action under the Comprehensive Environmental Response, Compensation, and Liability Act should carefully scrutinize the public record concerning the site in question to determine whether the statute of limitations has already run on the "remedial action" involved, say Lester Brown and Thomas McMahon of Perkins Coie LLP.

Anticipating Criminal Charges Against Volkswagen

In the past year, Toyota Motor Corp. and General Motors LLC were criminally investigated by the U.S. Department of Justice. Both companies entered into deferred prosecution agreements, and no individuals were criminally charged. After its stunning admissions this week, Volkswagen likely will not be as fortunate as its competitors in avoiding indictment — for two reasons, says Linda Dale Hoffa of Dilworth Paxson LLP.

LEGAL INDUSTRY

Trial Ace: Vinson & Elkins' Harry Reasoner

While other boys played football or baseball, Harry Reasoner, a year younger than his classmates and no star athlete, fell in love with a different sport: debate. After five decades and 47 wins for Vinson & Elkins LLP, it's clear that trying lawsuits is one game he plays well.

The Top 5 Beauty Contest Pet Peeves Of GCs

Winning the respect, and business, of a major company in a so-called beauty contest is about much more than looking pretty. Yet general counsels say law firms sometimes not only fail to put their best feet forward, but often give pitches that can be tone deaf and unethical. Here, we look at the behaviors law firms need to avoid when in a beauty contest.

Pillsbury May Lose Cred If Chadbourne Deal Stalls

After failing to tie the knot with a number of other law firms, Pillsbury Winthrop Shaw Pittman LLP's reputation will be on the line if its potential tie-up with Chadbourne & Parke LLP doesn't go through, experts say.

Dewey Jury Eyes Racy Emails As Deliberations Stretch On

The jury in the trial of the former top executives of Dewey & LeBoeuf LLP on Thursday asked to review curse-filled emails from former partners incensed at the firm's chairman, as well as accounting entries, information about the defendants' compensation and other exhibits as deliberations stretched into the sixth day.

Law360's Weekly Verdict: Legal Lions & Lambs

Kirkland & Ellis LLP clinched the title of Law360's top legal lion this week when it snagged a jury verdict clearing Samsung of infringement in long-running litigation with a company dubbed "the original patent troll," while Munger Tolles & Olson LLP headed up this week's legal lambs when a judge ruled Warner never owned a valid copyright on "Happy Birthday to You."

7th Circ. Judge Richard Cudahy Dies At 89

Seventh Circuit Judge Richard D. Cudahy died Tuesday at his home after succumbing to a long-term illness, one of his former clerks told Law360 on Thursday.

Fla. Bar Examiners Say Reciprocity Is Against Public Interest

The Florida Board of Bar Examiners and the Palm Beach County Bar Association have joined the opposition to a proposal before The Florida Bar to allow admission to out-of-state attorneys without taking the state bar exam, with the examiners telling the group the idea isn't in the public's best interest.

The U.S. Environmental Protection Agency and Pennsylvania's Department of Environmental Protection on Thursday inked a settlement for a lawsuit alleging that Indspec Chemical Corp. violated the Clear Air Act by improperly monitoring the emission of hazardous air pollutants from its production of the chemical resorcinol.

LITIGATION

Dealers Hit VW With Latest Suit In Diesel-Emissions Scandal

Independent auto dealers hit Volkswagen Group of America Inc. with a proposed class action in California federal court on Thursday, jumping into litigation stemming from the company's alleged engineering of diesel engines to beat emissions standards.

Biofuel Group Asks DC Circ. To Modify Test Fuel Opinion

A biofuel advocacy group renewed its bid Thursday for the D.C. Circuit to modify its opinion regarding the U.S. Environmental Protection Agency's rules requiring test fuels be commercially available before they can be approved, arguing the agency's discretion will be better preserved if the opinion is amended.

Enviros Sue For Gov't Info On Crude Oil Exports

Conservation groups on Thursday sued the Obama administration for allegedly refusing to release information about recent crude oil export authorizations.

9th Circ. Asked To Revive Suit Over $3.3B Nuke Plant Charges

Consumers accusing the California Public Utilities Commission of wrongly charging them $3.3 billion for a nuclear plant's defective steam generators urged the Ninth Circuit to revive their suit Wednesday because they had not received fair notice and hearing in advance of the utility's decision.

US Ducks Waste Co.'s $1M Suit Over Tainted Oil

A Colorado federal court Wednesday dismissed a waste management company's suit seeking compensation for a U.S. Air Force shipment of tainted oil that allegedly caused more than $1 million in damage and cleanup.

Sierra Club Gets OK To Intervene In Luminant Clean Air Suit

A Texas federal judge on Wednesday granted the Sierra Club the right to intervene in a Clean Air Act suit lodged against Energy Future Holdings subsidiary Luminant Generation Co. by the federal government, while also setting some restrictions on its involvement.

NJ Lawmakers Decry DEP's Water Regulation Changes

Two New Jersey senators vowed Thursday to overturn the state Department of Environmental Protection's proposed changes to rules governing flood control, stormwater

and coastal management areas, echoing environmentalists who contend the updates would weaken water quality protections.

Occidental Says Texas Law Doesn't Apply To Sinkhole Suit

Occidental Chemical Corp. told a Texas federal court on Thursday that its dispute with Liberty Insurance Underwriters Inc. over liability for a massive sinkhole is not governed by Texas law because the Houston-based chemical manufacturer was incorporated in New York.

HollyFrontier Allegedly Owes $14M For Refinery Cleanup

HollyFrontier allegedly lied about the existence of lead contamination at an oil refinery before selling it and now refuses to pay $14 million to help the refinery's current owner clean it up, according to a complaint filed in Montana federal court.

IRS Gives Brush-Off To 8th Circ. Conservation Pay Ruling

The Internal Revenue Service on Thursday said the Eighth Circuit misinterpreted federal guidance in a holding last year that the payments a nonfarmer couple received under a federal conservation program were not taxable as self-employment income and recommended its lawyers not follow the decision in other courts.

EXPERT ANALYSIS

Methods To Minimize CERCLA Liability: Part 2

Companies served with potentially responsible party letters by the U.S. Environmental Protection Agency or state agencies threatening action under the Comprehensive Environmental Response, Compensation, and Liability Act should carefully scrutinize the public record concerning the site in question to determine whether the statute of limitations has already run on the "remedial action" involved, say Lester Brown and Thomas McMahon of Perkins Coie LLP.

Anticipating Criminal Charges Against Volkswagen

In the past year, Toyota Motor Corp. and General Motors LLC were criminally investigated by the U.S. Department of Justice. Both companies entered into deferred prosecution agreements, and no individuals were criminally charged. After its stunning admissions this week, Volkswagen likely will not be as fortunate as its competitors in avoiding indictment — for two reasons, says Linda Dale Hoffa of Dilworth Paxson LLP.

LEGAL INDUSTRY

Trial Ace: Vinson & Elkins' Harry Reasoner

While other boys played football or baseball, Harry Reasoner, a year younger than his classmates and no star athlete, fell in love with a different sport: debate. After five decades and 47 wins for Vinson & Elkins LLP, it's clear that trying lawsuits is one game he plays well.

The Top 5 Beauty Contest Pet Peeves Of GCs

Winning the respect, and business, of a major company in a so-called beauty contest is about much more than looking pretty. Yet general counsels say law firms sometimes not only fail to put their best feet forward, but often give pitches that can be tone deaf and unethical. Here, we look at the behaviors law firms need to avoid when in a beauty contest.

Pillsbury May Lose Cred If Chadbourne Deal Stalls

After failing to tie the knot with a number of other law firms, Pillsbury Winthrop Shaw Pittman LLP's reputation will be on the line if its potential tie-up with Chadbourne & Parke LLP doesn't go through, experts say.

Dewey Jury Eyes Racy Emails As Deliberations Stretch On

The jury in the trial of the former top executives of Dewey & LeBoeuf LLP on Thursday asked to review curse-filled emails from former partners incensed at the firm's chairman, as well as accounting entries, information about the defendants' compensation and other exhibits as deliberations stretched into the sixth day.

Law360's Weekly Verdict: Legal Lions & Lambs

Kirkland & Ellis LLP clinched the title of Law360's top legal lion this week when it snagged a jury verdict clearing Samsung of infringement in long-running litigation with a company dubbed "the original patent troll," while Munger Tolles & Olson LLP headed up this week's legal lambs when a judge ruled Warner never owned a valid copyright on "Happy Birthday to You."

7th Circ. Judge Richard Cudahy Dies At 89

Seventh Circuit Judge Richard D. Cudahy died Tuesday at his home after succumbing to a long-term illness, one of his former clerks told Law360 on Thursday.

Fla. Bar Examiners Say Reciprocity Is Against Public Interest

The Florida Board of Bar Examiners and the Palm Beach County Bar Association have joined the opposition to a proposal before The Florida Bar to allow admission to out-of-state attorneys without taking the state bar exam, with the examiners telling the group the idea isn't in the public's best interest.

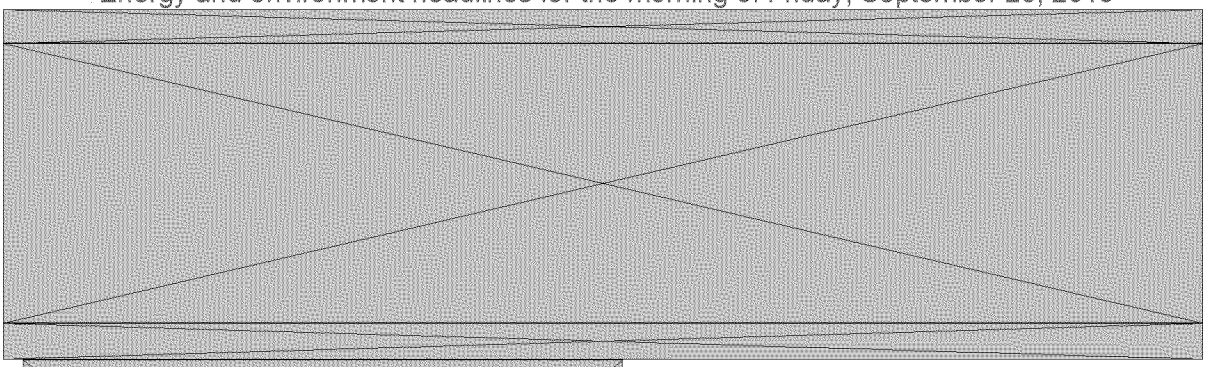
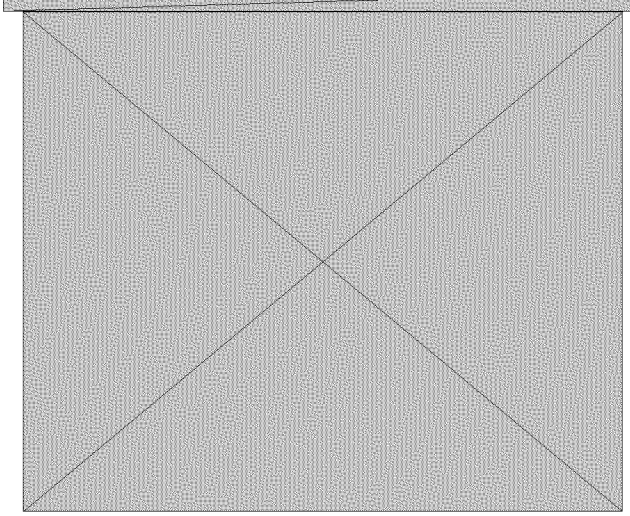
Energy and environment headlines for the morning of Friday, September 25, 2015





China to unveil cap-and-trade, clean energy plans at White House

By Kevin Rogers

China will announce Friday it is launching a national cap-and-trade system by 2017, prioritizing renewable energy on its grid and making a "substantial" financial contribution to the fight against climate change as part of bilateral talks between President Barack Obama and Chinese President Xi Jinping.

Senior administration officials, speaking on condition of anonymity so as not to

preempt official word from the Chinese, told reporters Thursday that the policy announcements will come as Xi and Obama release a new joint statement on climate action.

The statement will lay out out a "common vision" for United Nations climate negotiations in December, unveil new initiatives to reduce carbon pollution and codify new commitments to climate financing for developing countries.

The policies are intended to meet the targets laid out during talks between Obama and Xi in November, where China vowed to peak its emissions by 2030 and the U.S. pledged to cut emissions by up to 28 percent by 2025, compared with 2005 levels.

"Last year's joint announcement was about setting targets. And this year is about showing the world our countries' conviction to implement policies to reach those targets and to lead the world toward a durable global climate agreement," one of the officials said.

The cap-and-trade system would build off of pilot programs that China has conducted in recent years and would apply to power generation, iron and steel production, chemical manufacturing and building material production.

China will also move on a "green dispatch" policy for its power grid, which would give priority to renewable and low-carbon sources before accepting power from traditional sources, a policy that would provide incentive for cleaner fuels and discourage carbon-intensive fuels.

The U.S. and China will also lay out timelines for finalizing heavy-duty truck standards, as well as announce new proposals to boost building efficiency and further phase-down emissions of hydrofluorocarbons, greenhouse gases with a high global warming potential.

The officials said Friday's announcement would help put to rest criticisms that the U.S. was moving to cut carbon emissions and contribute to climate financing without other nations doing their part.

"[The] announcement should help reinforce that, in fact, the opposite is true," one official said. "When the United States leads and shows global leadership in the climate space, it encourages a broader set of countries to respectively do what they can to try to help toward a common goal of encouraging low-carbon development globally."

Scott Segal, director of the Electric Reliability Coordinating Council, however, raised doubts about China's good faith on carbon reductions and the pending announcement.

"An undefined financial commitment and vague statements about a carbon market are no substitute for actual commitments to reduce carbon emission," he said. "To date, we haven't seen that kind of commitment."

Congressional Republicans also have been critical of the deal struck with China last year, contending it would allow China to continue to increase its emissions until 2030, while the

U.S. would have to cut back.

Obama has called for Congress to set aside $3 billion to contribute to the United Nations Green Climate Fund, though the fate of that funding rests with appropriators. The officials said that while China wouldn't be contributing directly to the UN program, it would be "consistent" with the fund's mission.

China will also pick up a U.S. commitment to limit public financing for high-carbon infrastructure and energy projects. The U.S. in 2013 halted public financing for conventional coal-fired plants abroad, setting exceptions for poor countries.

On another call, Deputy National Security Advisor for Strategic Communications Ben Rhodes said Friday's announcements will help set the stage as Obama heads to the United Nations General Assembly on Sunday, where he will seek to press world leaders to support a strong climate agreement in December.

"As the two biggest emitters of the world, the leadership shown by the U.S. and China heading into the U.N. session and the meetings in Paris will be critical to a successful outcome," he said. "So after the breakthrough last year... we'll have an opportunity to put some additional meat on the bones in the discussions over the next two days about the commitments the United States and China will be taking into Paris."

While Obama won't attend a specialized climate change discussion on Sunday, Rhodes said that the issue will be in focus when he addresses the UN on Monday morning.

Upcoming Events

California regulators to restore emissions-cutting fuel rule

By Judy Lin

SACRAMENTO, Calif. (AP) — California regulators are poised to restore a first-in-the-nation climate change program that requires a 10 percent cut in carbon emissions on transportation fuels sold in the state by 2020, despite oil industry objections that it could drive up gas prices.

After the program survived a lengthy legal challenge from fuel makers, regulators are expected to vote Friday on the clean fuel standard, which environmentalists and some business groups are hailing as one of California's most important moves to reduce greenhouse gas emissions.

The California Air Resources Board estimates the economic impact to consumers would be a few cents per gallon, costing a typical commuter $5 to $21 extra in 2017, increasing to $12 to $48 annually in 2020.

"It is giving clear direction to the fuel-producing sector that this is the direction of the state," said John Boesel, president and chief executive of CALSTART, a transportation business group that supports clean-energy technology.

More

North Dakota: Longer deadline but tougher flaring mandate

By Blake Nicholson

BISMARCK, N.D. (AP) — North Dakota regulators have given the oil industry an additional 10 months next year to cut down on the reduction of wasteful flaring of natural gas but also implemented a stiffer long-term benchmark.

The decision Thursday by the state Industrial Commission pleased neither the industry nor environmental groups, but regulators said it's a give-and-take aimed at putting more natural gas on the market to the benefit of both energy companies and consumers.

"I'm interested in the end game — where do we wind up," said Attorney General Wayne Stenehjem, who sits on the commission with Gov. Jack Dalrymple and Agriculture Commissioner Doug Goehring, all Republicans.

Natural gas is a byproduct of oil production. About 20 percent is currently burned off in North Dakota — the nation's No. 2 oil producer behind Texas — because the infrastructure isn't in place to move it all to market. That's enough gas to meet the daily needs of just under 2,000 average U.S. homes, according to data from the American Gas Association.

More

EPA to change diesel tests to thwart VW-like cheating

By Tom Krisher and Matthew Daly

DETROIT (AP) — The U.S. Environmental Protection Agency plans sweeping changes to the way it tests for diesel emissions after getting duped by clandestine software in Volkswagen cars for seven years.

Chris Grundler, head of the EPA's office of transportation and air quality, indicated the agency would add on-road testing to its regimen. VW's sophisticated software allowed its cars to pass tests in the lab and then spew pollution into the atmosphere while on the highway.

The revelations meant unwanted scrutiny for the EPA. Its testing procedures have been criticized for being predictable and outdated, making it relatively easy for VW to cheat.

What's more, the EPA did not initially uncover the problem; researchers at West Virginia University did, using on-road testing.

Grundler says the changes are designed to detect software and other methods automakers might use to rig a test.

More

State attorneys general launch investigation of Volkswagen

By The Associated Press

LANSING, Mich. (AP) — At least 27 state attorneys general are opening a multi-state investigation into Volkswagen after it came clean about rigging diesel emissions technology to pass U.S. smog tests.

Michigan Attorney General Bill Schuette's office said Thursday he and at least 26 other attorneys general will send subpoenas to the German automaker. Spokeswoman Andrea Bitely says many states will investigate both through their consumer protection and environmental protection divisions.

Volkswagen is reeling from revelations it used secret software to thwart diesel smog tests on nearly a half million vehicles in the U.S.

Participating states include Alabama, Arizona, California, Connecticut, Delaware, Florida, Illinois, Indiana, Iowa, Kentucky, Maine, Maryland, Michigan, Mississippi, Nebraska, Nevada, New Mexico, New York, North Carolina, Oklahoma, Oregon, Pennsylvania, Rhode Island, Tennessee, Texas, Vermont and Virginia. Washington, D.C., also is involved.

Interview: UN nuke chief pushback against Iran probe critics

By George Jahn

UNITED NATIONS (AP) — The head of the U.N. nuclear agency pushed back on Thursday against critics questioning the wisdom of letting Iranian experts take samples meant to help determine whether their own country clandestinely worked in the past on atomic arms, saying he is convinced the process was faultless.

Yukiya Amano spoke to The Associated Press less than a week after confirming that Iranians did the environmental sampling at a site where such alleged experiments took place. Personnel from his International Atomic Energy Agency normally do the work of swiping equipment and sampling the soil and air at sites they suspect was used for hidden nuclear

activities.

Noting that the Iranians were under stringent IAEA monitoring, Amano then said he was confident "so far" that the samples were genuine. He appeared to go further on Thursday, however. While declining to say how far his agency's laboratory analysis has gone, he said he is "very sure that ... the samples are authentic."

The alleged test of explosive triggers for a nuclear bomb at the Parchin military site is one of about a dozen suspected experiments linked to such a weapon that the IAEA has been trying to probe for more than a decade. Iran denies ever working on such arms and says its present nuclear program is meant only to generate power and for science and medicine.

FWS: Walrus deaths natural in Alaska

By Dan Joling

ANCHORAGE, Alaska (AP) — Walrus carcasses were found last week on a northwest Alaska beach, but the U.S. Fish and Wildlife Service says the deaths appear to be natural.

The animals were discovered near Point Lay at the same location where 35,000 walrus were spotted on shore Sept. 2.

An employee of the U.S. Geological Survey provided a photo of the walrus carcasses to Fish and Wildlife, the service said in Thursday release.

The service said it is analyzing the photos to determine if the carcasses are new or old and trying to determine an age range of the walruses. An investigator will then have to confirm onsite.

More

Asian Development Bank doubles climate financing

By The Associated Press

STOCKHOLM (AP) — The Asian Development Bank says it will double its funding to fight climate change to $6 billion by 2020.

The Manila, Philippines-based ADB says that means its spending on tackling global warming will rise to about 30 percent of its overall financing.

The bank said Friday it will dedicate $4 billion to lowering greenhouse gas emissions "through scaling up support for renewable energy, energy efficiency, sustainable transport, and building smart cities."

The remaining $2 billion will be spent on efforts to help vulnerable countries adapt to climate change, including "through more resilient infrastructure, climate-smart agriculture, and better preparation for climate-related disasters."

More

Singapore shuts schools, distributes free masks for haze

By Annabelle Liang

SINGAPORE (AP) — Singapore shut schools Friday and began distributing free anti-pollution masks to the elderly and other vulnerable people as a thick smoky haze cast covered the island-nation with pollution reaching its worst level this year.

The haze — a pall of grayness that resembles wintry fog and virtually obliterates the skyline while even seeping inside homes — is an annual problem for the region, resulting from forests being burned in neighboring Indonesia to clear the land for farming and plantations.

Repeated efforts to bring the offending companies to book have not helped. Meanwhile, people in Singapore, Malaysia and Indonesia suffer from the smoke, a serious health hazard, especially for the elderly, children and those with breathing problems.

The three-hour Pollutant Standards Index (PSI), which measures air pollution in the country, hit 341 on Friday morning, the highest level this year, before dipping below 300, the hazardous mark.

More

Major move for Marcellus pipeline as PennEast files with FERC

PennEast has asked the Federal Energy Regulatory Commission for permission to build a pipeline to transport natural gas from the Marcellus Shale into New Jersey, NPR reports.

Oil prices pressured by week Japanese economic data

Weak consumer data from Japan and a cut in Standard & Poor's oil projections were pressuring oil prices early Friday. West Texas Intermediate crude rose just 36 cents to $45.27 a barrel in electronic trading on the Nymex, while London Brent increased 16 cents to $48.33, Reuters reports.

China to unveil cap-and-trade, clean energy plans at White House

By Kevin Rogers

China will announce Friday it is launching a national cap-and-trade system by 2017, prioritizing renewable energy on its grid and making a "substantial" financial contribution to the fight against climate change as part of bilateral talks between President Barack Obama and Chinese President Xi Jinping.

Senior administration officials, speaking on condition of anonymity so as not to

preempt official word from the Chinese, told reporters Thursday that the policy announcements will come as Xi and Obama release a new joint statement on climate action.

The statement will lay out out a "common vision" for United Nations climate negotiations in December, unveil new initiatives to reduce carbon pollution and codify new commitments to climate financing for developing countries.

The policies are intended to meet the targets laid out during talks between Obama and Xi in November, where China vowed to peak its emissions by 2030 and the U.S. pledged to cut emissions by up to 28 percent by 2025, compared with 2005 levels.

"Last year's joint announcement was about setting targets. And this year is about showing the world our countries' conviction to implement policies to reach those targets and to lead the world toward a durable global climate agreement," one of the officials said.

The cap-and-trade system would build off of pilot programs that China has conducted in recent years and would apply to power generation, iron and steel production, chemical manufacturing and building material production.

China will also move on a "green dispatch" policy for its power grid, which would give priority to renewable and low-carbon sources before accepting power from traditional sources, a policy that would provide incentive for cleaner fuels and discourage carbon-intensive fuels.

The U.S. and China will also lay out timelines for finalizing heavy-duty truck standards, as well as announce new proposals to boost building efficiency and further phase-down emissions of hydrofluorocarbons, greenhouse gases with a high global warming potential.

The officials said Friday's announcement would help put to rest criticisms that the U.S. was moving to cut carbon emissions and contribute to climate financing without other nations doing their part.

"[The] announcement should help reinforce that, in fact, the opposite is true," one official said. "When the United States leads and shows global leadership in the climate space, it encourages a broader set of countries to respectively do what they can to try to help toward a common goal of encouraging low-carbon development globally."

Scott Segal, director of the Electric Reliability Coordinating Council, however, raised doubts about China's good faith on carbon reductions and the pending announcement.

"An undefined financial commitment and vague statements about a carbon market are no substitute for actual commitments to reduce carbon emission," he said. "To date, we haven't seen that kind of commitment."

Congressional Republicans also have been critical of the deal struck with China last year, contending it would allow China to continue to increase its emissions until 2030, while the

U.S. would have to cut back.

Obama has called for Congress to set aside $3 billion to contribute to the United Nations Green Climate Fund, though the fate of that funding rests with appropriators. The officials said that while China wouldn't be contributing directly to the UN program, it would be "consistent" with the fund's mission.

China will also pick up a U.S. commitment to limit public financing for high-carbon infrastructure and energy projects. The U.S. in 2013 halted public financing for conventional coal-fired plants abroad, setting exceptions for poor countries.

On another call, Deputy National Security Advisor for Strategic Communications Ben Rhodes said Friday's announcements will help set the stage as Obama heads to the United Nations General Assembly on Sunday, where he will seek to press world leaders to support a strong climate agreement in December.

"As the two biggest emitters of the world, the leadership shown by the U.S. and China heading into the U.N. session and the meetings in Paris will be critical to a successful outcome," he said. "So after the breakthrough last year... we'll have an opportunity to put some additional meat on the bones in the discussions over the next two days about the commitments the United States and China will be taking into Paris."

While Obama won't attend a specialized climate change discussion on Sunday, Rhodes said that the issue will be in focus when he addresses the UN on Monday morning.

Upcoming Events

California regulators to restore emissions-cutting fuel rule

By Judy Lin

SACRAMENTO, Calif. (AP) — California regulators are poised to restore a first-in-the-nation climate change program that requires a 10 percent cut in carbon emissions on transportation fuels sold in the state by 2020, despite oil industry objections that it could drive up gas prices.

After the program survived a lengthy legal challenge from fuel makers, regulators are expected to vote Friday on the clean fuel standard, which environmentalists and some business groups are hailing as one of California's most important moves to reduce greenhouse gas emissions.

The California Air Resources Board estimates the economic impact to consumers would be a few cents per gallon, costing a typical commuter $5 to $21 extra in 2017, increasing to $12 to $48 annually in 2020.

"It is giving clear direction to the fuel-producing sector that this is the direction of the state," said John Boesel, president and chief executive of CALSTART, a transportation business group that supports clean-energy technology.

More

North Dakota: Longer deadline but tougher flaring mandate

By Blake Nicholson

BISMARCK, N.D. (AP) — North Dakota regulators have given the oil industry an additional 10 months next year to cut down on the reduction of wasteful flaring of natural gas but also implemented a stiffer long-term benchmark.

The decision Thursday by the state Industrial Commission pleased neither the industry nor environmental groups, but regulators said it's a give-and-take aimed at putting more natural gas on the market to the benefit of both energy companies and consumers.

"I'm interested in the end game — where do we wind up," said Attorney General Wayne Stenehjem, who sits on the commission with Gov. Jack Dalrymple and Agriculture Commissioner Doug Goehring, all Republicans.

Natural gas is a byproduct of oil production. About 20 percent is currently burned off in North Dakota — the nation's No. 2 oil producer behind Texas — because the infrastructure isn't in place to move it all to market. That's enough gas to meet the daily needs of just under 2,000 average U.S. homes, according to data from the American Gas Association.

EPA to change diesel tests to thwart VW-like cheating

By Tom Krisher and Matthew Daly

DETROIT (AP) — The U.S. Environmental Protection Agency plans sweeping changes to the way it tests for diesel emissions after getting duped by clandestine software in Volkswagen cars for seven years.

Chris Grundler, head of the EPA's office of transportation and air quality, indicated the agency would add on-road testing to its regimen. VW's sophisticated software allowed its cars to pass tests in the lab and then spew pollution into the atmosphere while on the highway.

The revelations meant unwanted scrutiny for the EPA. Its testing procedures have been criticized for being predictable and outdated, making it relatively easy for VW to cheat.

What's more, the EPA did not initially uncover the problem; researchers at West Virginia University did, using on-road testing.

Grundler says the changes are designed to detect software and other methods automakers might use to rig a test.

More

State attorneys general launch investigation of Volkswagen

By The Associated Press

LANSING, Mich. (AP) — At least 27 state attorneys general are opening a multi-state investigation into Volkswagen after it came clean about rigging diesel emissions technology to pass U.S. smog tests.

Michigan Attorney General Bill Schuette's office said Thursday he and at least 26 other attorneys general will send subpoenas to the German automaker. Spokeswoman Andrea Bitely says many states will investigate both through their consumer protection and environmental protection divisions.

Volkswagen is reeling from revelations it used secret software to thwart diesel smog tests on nearly a half million vehicles in the U.S.

Participating states include Alabama, Arizona, California, Connecticut, Delaware, Florida, Illinois, Indiana, Iowa, Kentucky, Maine, Maryland, Michigan, Mississippi, Nebraska, Nevada, New Mexico, New York, North Carolina, Oklahoma, Oregon, Pennsylvania, Rhode Island, Tennessee, Texas, Vermont and Virginia. Washington, D.C., also is involved.

Interview: UN nuke chief pushback against Iran probe critics

By George Jahn

UNITED NATIONS (AP) — The head of the U.N. nuclear agency pushed back on Thursday against critics questioning the wisdom of letting Iranian experts take samples meant to help determine whether their own country clandestinely worked in the past on atomic arms, saying he is convinced the process was faultless.

Yukiya Amano spoke to The Associated Press less than a week after confirming that Iranians did the environmental sampling at a site where such alleged experiments took place. Personnel from his International Atomic Energy Agency normally do the work of swiping equipment and sampling the soil and air at sites they suspect was used for hidden nuclear

activities.

Noting that the Iranians were under stringent IAEA monitoring, Amano then said he was confident "so far" that the samples were genuine. He appeared to go further on Thursday, however. While declining to say how far his agency's laboratory analysis has gone, he said he is "very sure that ... the samples are authentic."

The alleged test of explosive triggers for a nuclear bomb at the Parchin military site is one of about a dozen suspected experiments linked to such a weapon that the IAEA has been trying to probe for more than a decade. Iran denies ever working on such arms and says its present nuclear program is meant only to generate power and for science and medicine.

FWS: Walrus deaths natural in Alaska

By Dan Joling

ANCHORAGE, Alaska (AP) — Walrus carcasses were found last week on a northwest Alaska beach, but the U.S. Fish and Wildlife Service says the deaths appear to be natural.

The animals were discovered near Point Lay at the same location where 35,000 walrus were spotted on shore Sept. 2.

An employee of the U.S. Geological Survey provided a photo of the walrus carcasses to Fish and Wildlife, the service said in Thursday release.

The service said it is analyzing the photos to determine if the carcasses are new or old and trying to determine an age range of the walruses. An investigator will then have to confirm onsite.

Asian Development Bank doubles climate financing

By The Associated Press

STOCKHOLM (AP) — The Asian Development Bank says it will double its funding to fight climate change to $6 billion by 2020.

The Manila, Philippines-based ADB says that means its spending on tackling global warming will rise to about 30 percent of its overall financing.

The bank said Friday it will dedicate $4 billion to lowering greenhouse gas emissions "through scaling up support for renewable energy, energy efficiency, sustainable transport, and building smart cities."

The remaining $2 billion will be spent on efforts to help vulnerable countries adapt to climate change, including "through more resilient infrastructure, climate-smart agriculture, and better preparation for climate-related disasters."

Singapore shuts schools, distributes free masks for haze

By Annabelle Liang

SINGAPORE (AP) — Singapore shut schools Friday and began distributing free anti-pollution masks to the elderly and other vulnerable people as a thick smoky haze cast covered the island-nation with pollution reaching its worst level this year.

The haze — a pall of grayness that resembles wintry fog and virtually obliterates the skyline while even seeping inside homes — is an annual problem for the region, resulting from forests being burned in neighboring Indonesia to clear the land for farming and plantations.

Repeated efforts to bring the offending companies to book have not helped. Meanwhile, people in Singapore, Malaysia and Indonesia suffer from the smoke, a serious health hazard, especially for the elderly, children and those with breathing problems.

The three-hour Pollutant Standards Index (PSI), which measures air pollution in the country, hit 341 on Friday morning, the highest level this year, before dipping below 300, the hazardous mark.

VW recall letters in April warned of an emissions glitch
Alexandria Sage, Reuters

In April of 2015, Volkswagen of America, Inc. sent letters to California owners of diesel-powered Audis and Volkswagens informing them of an "emissions service action" affecting the vehicles. Owners were told they would need to take their cars to a dealer for new software to ensure tailpipe emissions were "optimized and operating efficiently."

VW scandal caused nearly 1m tonnes of extra pollution, analysis shows
Karl Mathiesen and Arthur Neslen, The Guardian

Volkswagen's rigging of emissions tests for 11m cars means they may be responsible for nearly 1m tonnes of air pollution every year, roughly the same as the UK's combined emissions for all power stations, vehicles, industry and agriculture, a Guardian analysis suggests.

Obama to overhaul process for offsetting environmental harm
Corbin Hiar, E&E

The White House is preparing a presidential memorandum that seeks to streamline how the government offsets damage to public lands, waters and wildlife, according to several sources. The memo aims to consolidate separate mitigation policy reform efforts that are already underway at federal agencies and learn from past mistakes, sources said.

Clinton takes aim at pharma, Keystone — but industry lobbyists still provide campaign cash
Catherine Ho, Bloomberg News

Hillary Clinton took aim this week at the pharmaceutical industry and the Keystone oil pipeline. But that doesn't mean the Democratic presidential front-runner isn't enjoying the support of lobbyists representing drug and oil companies in Washington, many of whom are helping raise stacks of money for her campaign.

Caterpillar slashes revenue forecast, may cut up to 10,000 jobs
Lisa Von Ahn, Reuters

Caterpillar Inc slashed its 2015 revenue forecast and said it could cut up to 10,000 jobs through 2018, on Thursday joining a list of big U.S. industrial companies grappling with the shock waves from the mining and energy downturn.

EPA's fondness for high-end furniture costs taxpayers $92 million
Kellan Howell, The Washington Times

The Environmental Protection Agency over the past decade has spent a whopping $92.4 million to purchase, rent, install and store office furniture ranging from fancy hickory chairs and a hexagonal wooden table, worth thousands of dollars each, to a simple drawer to store pencils that cost $813.57.

U.S. Index Futures Advance as Yellen Supports 2015 Rate Increase
Alex Longley, Bloomberg News

U.S. stock-index futures advanced as Federal Reserve Chair Janet Yellen reiterated that the central bank is on track to raise interest rates this year, indicating its confidence in the economy. Standard & Poor's 500 Index E-mini contracts expiring in December jumped 1.2 percent to 1,942.5 at 7:05 a.m. in New York.

Oil & Natural Gas

Oil prices pare gains on stronger dollar, weak Japan data
Dmitry Zhdannikov, Reuters

Oil prices pared gains on Friday after the dollar rose on expectations the United States could still raise interest rates this year and after analysts from Standard & Poor's ratings cut their oil price assumptions. Weak consumer data from Japan also weighed on price and analysts said that the slowing global economic outlook meant that oil prices would likely remain low for months to come.

Halliburton job cut numbers surface, Houston at the center
Suzanne Edwards, Houston Business Journal

Halliburton Co. job cuts could amount to roughly 20,000 worldwide once finalized, and many will be in Houston, sources familiar with the matter say. Halliburton has terminated almost 16,000 positions globally, or approximately 19 percent of its

workforce, since its peak in 2014, spokesperson Emily Mir said in a statement to the Houston Business Journal.

TransCanada says cutting 20 percent of senior management positions
Nia Williams, Reuters

Pipeline company TransCanada Corp will cut 20 percent of its senior management positions as a continuing slump in oil prices has necessitated cost reductions, with further staff cuts possible in the future, a company spokesman said on Thursday.

Energy Lending Caught in a Squeeze
Emily Glazer et al., The Wall Street Journal

Banks are clashing with regulators over loan reviews that could crimp the flow of new credit to the oil patch. The dispute is focused on the relatively narrow issue of loans secured by oil and gas companies' reserves, but it highlights the much broader point of how postcrisis regulation of the financial industry is affecting sectors far from Wall Street.

Tax revenue falling short; North Dakota gets a 'wake-up call'
Mike Nowatzki, Forum News Service

North Dakota's tax revenues fell more than $40 million short of projections in July and August as the oil industry continued to idle drilling rigs amid low crude prices, prompting state lawmakers Wednesday to warn of the budget effects and suggest an updated revenue forecast may be needed.

Central Asia's shifting pipeline politics
Cristina Maza, The Christian Science Monitor

Global energy is undergoing tectonic shifts. Strong US oil and gas production has moved the locus of supply westward, while advanced efficiency and alternative energy have curbed demand across the developed world.

Utilities & Infrastructure

Clinton calls for sweeping power grid upgrades
Katie Bo Williams, The Hill

Hillary Clinton is calling for power grid upgrades to increase cybersecurity, the Democratic presidential front-runner revealed in a sweeping energy infrastructure policy statement released Wednesday.

Trader facing large FERC penalties could see big payoff as whistleblower in bank case

Glen Boshart, SNL

Rich Gates, whose Powhatan Energy Fund he co-owns with his twin brother is facing more than $20 million in penalties for allegedly exploiting a loophole in the PJM Interconnection LLC's markets, could be awarded more than that as a whistleblower if a rumored settlement is reached in a bank "dark pool" probe.

Southwest Power Pool reaches out to state air regulators
Rod Kuckro, E&E

The Southwest Power Pool on Tuesday hosted what amounted to an online mixer for the air regulators from the 14 states in which SPP ensures electric system reliability and operates electricity markets.

Renewables

Starbucks, Wal-Mart, Nike take on 100% renewable energy pledge
Alexandra Gibbs, CNBC

Starbucks, Wal-Mart, Goldman Sachs and Johnson & Johnson are among the latest round of companies making the pledge to convert completely to renewable energy, signaling a strong push for corporate backing of cleaner sources of power. The companies are part of a group of nine organizations, who have joined 36 corporations which have signed on to cut their carbon dioxide (CO2) emissions and source their electricity solely on green energy, as part of non-profit organization, The Climate Group's global initiative, "RE100".

Portable Wind Turbines Power Phones or Homes
Glenn McDonald, Discovery News

Billed as the world's first line of truly portable wind turbines, the team's Trinity power stations are designed to radically reduce the cost and hassle of harvesting wind power. The turbines come in four different sizes, starting with a 50-watt model that weighs in at 1.4 lbs and fits in your backpack.

Coal

US Coal Mines Continue To Dwindle As Weak Demand Takes A Toll
Avaneesh Pandey, International Business Times

The number of operating coal mines in the United States has hit a record low, as use of natural gas rises across the country. According to a report released Wednesday by the U.S. Energy Information Administration (EIA), just over 1,000 coal mines were operating in the country in 2013 — the most recent year for which data is available —

down from more than 1,400 in 2008, when coal production was at its highest.

US coal companies see a bright spot: pizza ovens
Mario Parker and Leslie Patton, Bloomberg News

Coal is finding its way back into the nation's favor — one pizza at a time. The growing appetite for coal-fired pizza is creating new demand for anthracite coal — it's the hardest kind and burns the hottest.

Nuclear

Nuclear fallout: Crystal River area tops nation in GDP loss after plant closure
Robert Trigaux, Tampa Bay Times

Only now are we starting to realize the profound economic impact of losing a nuclear power plant before its time. In an assessment of the gross domestic product growth in each of nation's largest 382 metropolitan areas, the one metro whose GDP contracted the most in 2014 was Florida's Homosassa Springs — an area that includes Citrus County and the town of Crystal River, home of the now defunct Crystal River nuclear power plant owned by Duke Energy.

Climate

China to Announce Cap-and-Trade Program to Limit Emissions
Julie Hirschfeld Davis and Coral Davenport, The New York Times

President Xi Jinping of China will make a landmark commitment on Friday to start a national program in 2017 that will limit and put a price on greenhouse gas emissions, Obama administration officials said Thursday. The move to create a so-called cap-and-trade system would be a substantial step by the world's largest polluter to reduce emissions from major industries, including steel, cement, paper and electric power.

Partisan applause as Pope Francis urges the US to fight climate change
Timothy Cama, The Hill

Pope Francis on Thursday urged lawmakers to help fight climate change, citing his historic June encyclical that focused on protecting the Earth. Addressing Congress for the first time, Francis said the United States has a responsibility to take steps to slow global warming.

Climate Rally Turnout Falls Flat, But Happiness Abounds
Davis Burroughs, Morning Consult

"Disappointing," "scant," and "probably not as big as they would have hoped for,"

were a few ways activists gathered on the National Mall for a climate change protest described the turnout. Never mind the turnout, though. Thursday's "Call to Moral Action for Climate Justice," which took place during Pope Francis' address to a joint-session of Congress, was buzzing with musical messages of love, peace, and hope.

Republicans vs. Pope: Where GOP candidates stand on climate change
Claire Zillman, Fortune

Many of the contenders not only denounce government intervention to combat climate change but reject climate science altogether. Here's where the leading GOP presidential candidates stand on the issue.

A Message from the American Coalition for Clean Coal Electricity:

Supporting energy policies that raise prices on consumers is a political loser. Thirty-six Members of Congress lost their seats after voting for the highly unpopular 2009 cap and trade legislation. Now cap and trade is back in the form of President Obama's costly and illegal carbon plan. Find out what history holds for supporters of costly carbon policies like the president's plan.

Opinions, Editorials & Perspectives

America's Electricity Future is in the Hands of Voters
Laura Sheehan, Morning Consult

The positions candidates take on the campaign trail matter. For example, we're currently seeing President Obama carry out many of the pet projects promised during his two presidential campaigns – none more so than the illegal carbon plan recently issued by the Environmental Protection Agency.

If An Energy Bill Drops In The Senate But Everyone Knows It Won't Pass, Does It Make A Sound?
Ryan Koronowski, Think Progress

This week, Senate Democrats unveiled an energy bill that would attempt to move America to a low-carbon future. But if the bill has zero chance of being passed in a chamber controlled by Republicans, does it matter?

Michigan leaders should embrace EPA's Clean Power Plan
Barry Solomon, Michigan Live

The truth is, the recently announced Clean Power Plan of the Environmental Protection Agency will grow our economy, reduce asthma, heart and lung disease and protect our air, land and water.

The Clean Power Plan is also good economics. Here's why.
Dan Upham, Environmental Defense Fund

Believe the hype: The Environmental Protection Agency's Clean Power Plan is as much a plan to bolster the economy as it's a move to protect the health of people and our planet.

Technology – not caps – is the answer for clean, affordable energy
Greg Boyce, The Hill

The new carbon plan favors a switch to the most expensive forms of energy. It puts at risk the best, most reliable power system in the world. And it quite literally throws caution to the wind for political convenience with no notable benefit under climate theory.

A Message from the American Coalition for Clean Coal Electricity:

President Obama's costly carbon plan is nothing more than a redo of his failed 2009 cap and trade legislation. This illegal plan is the most overreaching energy regulation in our nation's history and a political loser for any public official that supports it. Cap and trade advocates paid for their support with their seats in 2010. See what's in store for staunch supporters of the president's carbon plan this time around.

Congressional Budget Office

CBO estimates that enacting the bill would increase net offsetting receipts, which are treated as reductions in direct spending, by roughly $1 million over the 2020-2023 period.

OECD Companion to the Inventory of Support Measures for Fossil Fuels 2015
Organisation for Economic Co-operation and Development

This report emphasises the problems that fossil-fuel subsidies cause in the context of broader policy efforts for mitigating greenhouse-gas emissions, and reviews the various reform initiatives that have already been taken at the international level (G-20, APEC, etc.)

Subject: Morning Consult Energy, Presented by the American Coalition for Clean Coal Electricity: China to Announce Landmark Cap-And-Trade Program; Halliburton to Cut More Jobs

By Deirdra O'Regan

Today's Washington Brief

- President Xi Jinping today will commit China to a cap-and-trade system to limit greenhouse gas emissions starting in 2017, making China the world's largest carbon market. (The New York Times)

- Pope Francis urged the United States to take "responsible" action on climate change, but the pontiff received a mixed response from the mostly Republican audience during his historic address to Congress. (The Hill)

- A climate change rally at the Capitol failed to draw the numbers expected, but demonstrators present during the pope's speech pushed a positive message rather than aggressive tactics. (Morning Consult)

Today's Business Brief

- Halliburton Co. is cutting more jobs in North America due to the downturn in the oil industry. Job losses could amount to roughly 20,000 worldwide once finalized. (Houston Business Journal)

- TransCanada Corp., the company behind the Keystone XL pipeline, is cutting around 20 percent of its senior leadership, citing factors such as falling crude oil prices. (Reuters)

- Volkswagen of America Inc. sent letters in April to California owners of diesel-powered Volkswagens and Audis, warning of an emissions glitch and saying some owners needed new software to ensure emissions were "optimized and operating efficiently." (Reuters)

General

VW recall letters in April warned of an emissions glitch
Alexandria Sage, Reuters

In April of 2015, Volkswagen of America, Inc. sent letters to California owners of diesel-powered Audis and Volkswagens informing them of an "emissions service action" affecting the vehicles. Owners were told they would need to take their cars to a dealer for new software to ensure tailpipe emissions were "optimized and operating efficiently."

VW scandal caused nearly 1m tonnes of extra pollution, analysis shows
Karl Mathiesen and Arthur Neslen, The Guardian

Volkswagen's rigging of emissions tests for 11m cars means they may be responsible for nearly 1m tonnes of air pollution every year, roughly the same as the UK's combined emissions for all power stations, vehicles, industry and agriculture, a Guardian analysis suggests.

Obama to overhaul process for offsetting environmental harm
Corbin Hiar, E&E

The White House is preparing a presidential memorandum that seeks to streamline how the government offsets damage to public lands, waters and wildlife, according to several sources. The memo aims to consolidate separate mitigation policy reform efforts that are already underway at federal agencies and learn from past mistakes, sources said.

Clinton takes aim at pharma, Keystone — but industry lobbyists still provide campaign cash
Catherine Ho, Bloomberg News

Hillary Clinton took aim this week at the pharmaceutical industry and the Keystone oil pipeline. But that doesn't mean the Democratic presidential front-runner isn't enjoying the support of lobbyists representing drug and oil companies in Washington, many of whom are helping raise stacks of money for her campaign.

Caterpillar slashes revenue forecast, may cut up to 10,000 jobs
Lisa Von Ahn, Reuters

Caterpillar Inc slashed its 2015 revenue forecast and said it could cut up to 10,000 jobs through 2018, on Thursday joining a list of big U.S. industrial companies grappling with the shock waves from the mining and energy downturn.

EPA's fondness for high-end furniture costs taxpayers $92 million
Kellan Howell, The Washington Times

The Environmental Protection Agency over the past decade has spent a whopping $92.4 million to purchase, rent, install and store office furniture ranging from fancy hickory chairs and a hexagonal wooden table, worth thousands of dollars each, to a simple drawer to store pencils that cost $813.57.

U.S. Index Futures Advance as Yellen Supports 2015 Rate Increase
Alex Longley, Bloomberg News

U.S. stock-index futures advanced as Federal Reserve Chair Janet Yellen reiterated that the central bank is on track to raise interest rates this year, indicating its confidence in the economy. Standard & Poor's 500 Index E-mini contracts expiring in December jumped 1.2 percent to 1,942.5 at 7:05 a.m. in New York.

Oil & Natural Gas

Oil prices pare gains on stronger dollar, weak Japan data
Dmitry Zhdannikov, Reuters

Oil prices pared gains on Friday after the dollar rose on expectations the United States could still raise interest rates this year and after analysts from Standard & Poor's ratings cut their oil price assumptions. Weak consumer data from Japan also weighed on price and analysts said that the slowing global economic outlook meant that oil prices would likely remain low for months to come.

Halliburton job cut numbers surface, Houston at the center
Suzanne Edwards, Houston Business Journal

Halliburton Co. job cuts could amount to roughly 20,000 worldwide once finalized, and many will be in Houston, sources familiar with the matter say. Halliburton has terminated almost 16,000 positions globally, or approximately 19 percent of its

workforce, since its peak in 2014, spokesperson Emily Mir said in a statement to the Houston Business Journal.

TransCanada says cutting 20 percent of senior management positions
Nia Williams, Reuters

Pipeline company TransCanada Corp will cut 20 percent of its senior management positions as a continuing slump in oil prices has necessitated cost reductions, with further staff cuts possible in the future, a company spokesman said on Thursday.

Energy Lending Caught in a Squeeze
Emily Glazer et al., The Wall Street Journal

Banks are clashing with regulators over loan reviews that could crimp the flow of new credit to the oil patch. The dispute is focused on the relatively narrow issue of loans secured by oil and gas companies' reserves, but it highlights the much broader point of how postcrisis regulation of the financial industry is affecting sectors far from Wall Street.

Tax revenue falling short; North Dakota gets a 'wake-up call'
Mike Nowatzki, Forum News Service

North Dakota's tax revenues fell more than $40 million short of projections in July and August as the oil industry continued to idle drilling rigs amid low crude prices, prompting state lawmakers Wednesday to warn of the budget effects and suggest an updated revenue forecast may be needed.

Central Asia's shifting pipeline politics
Cristina Maza, The Christian Science Monitor

Global energy is undergoing tectonic shifts. Strong US oil and gas production has moved the locus of supply westward, while advanced efficiency and alternative energy have curbed demand across the developed world.

Utilities & Infrastructure

Clinton calls for sweeping power grid upgrades
Katie Bo Williams, The Hill

Hillary Clinton is calling for power grid upgrades to increase cybersecurity, the Democratic presidential front-runner revealed in a sweeping energy infrastructure policy statement released Wednesday.

Trader facing large FERC penalties could see big payoff as whistleblower in bank case

Glen Boshart, SNL

Rich Gates, whose Powhatan Energy Fund he co-owns with his twin brother is facing more than $20 million in penalties for allegedly exploiting a loophole in the PJM Interconnection LLC's markets, could be awarded more than that as a whistleblower if a rumored settlement is reached in a bank "dark pool" probe.

Southwest Power Pool reaches out to state air regulators
Rod Kuckro, E&E

The Southwest Power Pool on Tuesday hosted what amounted to an online mixer for the air regulators from the 14 states in which SPP ensures electric system reliability and operates electricity markets.

Renewables

Starbucks, Wal-Mart, Nike take on 100% renewable energy pledge
Alexandra Gibbs, CNBC

Starbucks, Wal-Mart, Goldman Sachs and Johnson & Johnson are among the latest round of companies making the pledge to convert completely to renewable energy, signaling a strong push for corporate backing of cleaner sources of power. The companies are part of a group of nine organizations, who have joined 36 corporations which have signed on to cut their carbon dioxide (CO2) emissions and source their electricity solely on green energy, as part of non-profit organization, The Climate Group's global initiative, "RE100".

Portable Wind Turbines Power Phones or Homes
Glenn McDonald, Discovery News

Billed as the world's first line of truly portable wind turbines, the team's Trinity power stations are designed to radically reduce the cost and hassle of harvesting wind power. The turbines come in four different sizes, starting with a 50-watt model that weighs in at 1.4 lbs and fits in your backpack.

Coal

US Coal Mines Continue To Dwindle As Weak Demand Takes A Toll
Avaneesh Pandey, International Business Times

The number of operating coal mines in the United States has hit a record low, as use of natural gas rises across the country. According to a report released Wednesday by the U.S. Energy Information Administration (EIA), just over 1,000 coal mines were operating in the country in 2013 — the most recent year for which data is available —

down from more than 1,400 in 2008, when coal production was at its highest.

US coal companies see a bright spot: pizza ovens
Mario Parker and Leslie Patton, Bloomberg News

Coal is finding its way back into the nation's favor — one pizza at a time. The growing appetite for coal-fired pizza is creating new demand for anthracite coal — it's the hardest kind and burns the hottest.

Nuclear

Nuclear fallout: Crystal River area tops nation in GDP loss after plant closure
Robert Trigaux, Tampa Bay Times

Only now are we starting to realize the profound economic impact of losing a nuclear power plant before its time. In an assessment of the gross domestic product growth in each of nation's largest 382 metropolitan areas, the one metro whose GDP contracted the most in 2014 was Florida's Homosassa Springs — an area that includes Citrus County and the town of Crystal River, home of the now defunct Crystal River nuclear power plant owned by Duke Energy.

Climate

China to Announce Cap-and-Trade Program to Limit Emissions
Julie Hirschfeld Davis and Coral Davenport, The New York Times

President Xi Jinping of China will make a landmark commitment on Friday to start a national program in 2017 that will limit and put a price on greenhouse gas emissions, Obama administration officials said Thursday. The move to create a so-called cap-and-trade system would be a substantial step by the world's largest polluter to reduce emissions from major industries, including steel, cement, paper and electric power.

Partisan applause as Pope Francis urges the US to fight climate change
Timothy Cama, The Hill

Pope Francis on Thursday urged lawmakers to help fight climate change, citing his historic June encyclical that focused on protecting the Earth. Addressing Congress for the first time, Francis said the United States has a responsibility to take steps to slow global warming.

Climate Rally Turnout Falls Flat, But Happiness Abounds
Davis Burroughs, Morning Consult

"Disappointing," "scant," and "probably not as big as they would have hoped for,"

were a few ways activists gathered on the National Mall for a climate change protest described the turnout. Never mind the turnout, though. Thursday's "Call to Moral Action for Climate Justice," which took place during Pope Francis' address to a joint-session of Congress, was buzzing with musical messages of love, peace, and hope.

Republicans vs. Pope: Where GOP candidates stand on climate change
Claire Zillman, Fortune

Many of the contenders not only denounce government intervention to combat climate change but reject climate science altogether. Here's where the leading GOP presidential candidates stand on the issue.

A Message from the American Coalition for Clean Coal Electricity:

Supporting energy policies that raise prices on consumers is a political loser. Thirty-six Members of Congress lost their seats after voting for the highly unpopular 2009 cap and trade legislation. Now cap and trade is back in the form of President Obama's costly and illegal carbon plan. Find out what history holds for supporters of costly carbon policies like the president's plan.

Opinions, Editorials & Perspectives

America's Electricity Future is in the Hands of Voters
Laura Sheehan, Morning Consult

The positions candidates take on the campaign trail matter. For example, we're currently seeing President Obama carry out many of the pet projects promised during his two presidential campaigns – none more so than the illegal carbon plan recently issued by the Environmental Protection Agency.

If An Energy Bill Drops In The Senate But Everyone Knows It Won't Pass, Does It Make A Sound?
Ryan Koronowski, Think Progress

This week, Senate Democrats unveiled an energy bill that would attempt to move America to a low-carbon future. But if the bill has zero chance of being passed in a chamber controlled by Republicans, does it matter?

Michigan leaders should embrace EPA's Clean Power Plan
Barry Solomon, Michigan Live

The truth is, the recently announced Clean Power Plan of the Environmental Protection Agency will grow our economy, reduce asthma, heart and lung disease and protect our air, land and water.

The Clean Power Plan is also good economics. Here's why.
Dan Upham, Environmental Defense Fund

Believe the hype: The Environmental Protection Agency's Clean Power Plan is as much a plan to bolster the economy as it's a move to protect the health of people and our planet.

Technology – not caps – is the answer for clean, affordable energy
Greg Boyce, The Hill

The new carbon plan favors a switch to the most expensive forms of energy. It puts at risk the best, most reliable power system in the world. And it quite literally throws caution to the wind for political convenience with no notable benefit under climate theory.

A Message from the American Coalition for Clean Coal Electricity:

President Obama's costly carbon plan is nothing more than a redo of his failed 2009 cap and trade legislation. This illegal plan is the most overreaching energy regulation in our nation's history and a political loser for any public official that supports it. Cap and trade advocates paid for their support with their seats in 2010. See what's in store for staunch supporters of the president's carbon plan this time around.

Research Reports, Issue Briefs & Case Studies

Congressional Budget Office Cost Estimate on H.R. 1644 – the Supporting Transparent Regulatory and Environmental Actions in Mining (STREAM) Act
Congressional Budget Office

CBO estimates that enacting the bill would increase net offsetting receipts, which are treated as reductions in direct spending, by roughly $1 million over the 2020-2023 period.

All -- draft attached. This incorporates edits from Chris, Janet McCabe (Chris shared a version earlier with her), Byron, John Millett, Lee Cook in OTAQ. I'm not copying Janet on this, as she has seen this, and this version has her comments/questions in the bubbles.

Byron -- can you pls take a crack at addressing Janet's comments? There are only a small handful.

Tom, Nick, and others -- please edit away.

John Millet -- can you please send CARB a draft as an FYI. We mention them in here a few times so they should get a chance to review.

The Q&A will be circulated later.

thanks,

Ben

On Sep 24, 2015, at 5:20 PM, "Sergey Znaemsky" <znaemsky@autoreview.ru> wrote:

Dear Cristine,
Dear Kaul,

Hello!

This is Sergey Znaemsky from Autoreview Russian Newspaper writing you. We are very thrilled by the investigation on VW defeat devices. Our newspaper https://en.wikipedia.org/wiki/Autoreview is known for series of independent crush-tests and fuel consumption tests. We run our own AR-CAP passive safety rating http://autoreview.ru/arcap/ for almost 15 years and we also evaluate cars in Russia on fuel economy with our own ARDC (Autoreview Driving Cycle) which is more relevant to real driving conditions then european NEDC and US FTP. I also need to say that our chief editor Michael Podorozhansky is the long time member of european Car of the Year Committee and our deputy-in-chief editor Leonid Golovanov is the juror of The International Engine of the

Year.
So we are very interested in your conclusions regarding VW and going to evaluate diesel cars here in Russia. For this reason could you please provide us some additional info on your investigation.

The questions are below:

— How do you measure 10-40% increase in emissions when defeat device is not active? We understand that there is always a huge difference between real life consumption/emission data and test results, but this is well explained by test procedure itself (lower speed and acceleration rates). In our understanding to detect the defeat device affect you need to run vehicle in through a very similar to FTP driving cycle which has the same speeds and acceleration but somehow in different consequence to bypass the defeat device activation and reveal the difference between results with and without illegal software. Did you do so? Is 10-40% difference corresponds to this cycles or to FTP and «real-life» road driving?

— Does defeat software activate by any plugged-in testing devices or by the driving cycle itself — just when vehicle starts to warm-up and drive in accordance with FTP?

— Who is «driving» the car during your tests is it robotic driver, computer program or human driver?

— How defeat device affect the performance of the car? Can driver feel any difference in throttle response or power output?

— Did you test VW cars for defeat device activation at other testing cycles (NEDC for example)?

— Did you test other VW engines? Are you sure they don't have the same software?

— Why defeat device applied to the 2.0 TDI? Do you have any explanation why this software is used especially on this engine?

— Did you test diesels from other OEMs? There was media buzz that BMW diesels passed test and real life driving evaluation without any suspicious difference in results — is it true?

Guess that would be enough questions for the beginning)

We are waiting for your response.
Thank you in advance!

Best regards,

Sergey Znaemsky

To: Ortiz, Julia
Subject: VW's emissions-cleaning technology

Dear Ms Ortiz,

A rival carmaker has told me that other car manufacturers were always surprised VW was the only manufacturer of diesels on the US market using a technology for some of its diesels - the Golf, Beetle and Jetta - to clean its exhaust emissions that didn't involve injecting urea into the exhaust stream. For these vehicles, VW used only a catalytic converter known as a Lean NOx trap. My contact says his company always wondered how VW hoped to meet the US's tough emissions requirements with such an arrangement. The technical differences between VW and other carmakers suggest its technology should have excited suspicion from the start.

Does the EPA think an arrangement with a Lean NOx trap alone is suitable to meet US emissions requirements? Did the technical differences between VW and other manufacturers excite any suspicion?

ABOUT CLIMATEWIRE – The politics and business of climate change

ClimateWire is written and produced by the staff of E&E Publishing, LLC. It is designed to provide comprehensive, daily coverage of all aspects of climate change issues. From international agreements on carbon emissions to alternative energy technologies to state and federal GHG programs, ClimateWire plugs readers into the information they need to stay abreast of this sprawling, complex issue.

AN E&E PUBLISHING SERVICE

VEHICLES:
Inhofe not ready to blame EPA for VW emissions scandal

Amanda Reilly, E&E reporter

Published: Friday, September 25, 2015

The chairman of the Senate Environment and Public Works Committee yesterday said that his panel was looking into the recent emissions scandal involving Volkswagen but had not yet committed to holding a hearing.

U.S. EPA officials last week accused Volkswagen of using sophisticated software to cheat emissions standards; the German automaker has since acknowledged that it had outfitted 11 million diesel-powered vehicles with "defeat devices" (***Greenwire***, Sept. 22).

Speaking to reporters in the Capitol yesterday, Sen. James Inhofe (R-Okla.) would not point fingers at either Volkswagen or EPA for the scandal.

The EPW chairman acknowledged that he's usually quick to criticize EPA for blunders involving environmental regulations but said that he wanted to take his time and find out who's at fault before assessing blame.

Blaming EPA "seems to be the popular thing to say, and I'm normally the first person who would say that, but I'm not," he said. "Because we're still looking into it to see how this could have happened and who really is at fault."

The House Energy and Commerce Subcommittee on Oversight and Investigations has already announced that it will hold a hearing on the issue in the coming weeks (***E&E Daily***, Sept. 22).

While he did not commit to holding a hearing, Inhofe said he believed the issue was a "serious thing."

"They've got a serious problem," he said of Volkswagen. "I wouldn't suggest getting one right now."

Subject: Contact at EPA having to do with Transportation and new Vehicle emissions regulations compliance rules and procedures

Dear Enrique:

The Attorney General for Environmental Protection (PROFEPA-SEMARNAT) Office may get dialogue in regards to VW's Technology issues heaving to do with technology installed by manufacturer of Diesel units at EPA's OTAQ.

I am giving you the Director (s) Office phone number (s) of whom one or several of them may direct PROFEPA to the right EPA Colleague to whom you and the Offices of the SEMARNAT Secretary and Attorney General for Environmental Protection could expand communication.

OTAQ's Director Christopher Grundler at 001202-564-1682;

David Haugen OTAQ's Testing and Advance Technology Division, at 001734-214-4366

-

Enrique, la Oficina del Procurador y Secretario de SEMARNAT pudiera dialogar con la oficina de USEPA OTAQ sobre asuntos relacionados con la tecnología sobre emisiones a vehículos a Diésel de la compañía VW;

-

Te hago saber los nombres, teléfonos y estoy también haciendo copia de aquellos directores en OTAQ con quienes pueden extender la comunicación y quienes e su oportunidad les dirigirán con la persona y departamento correspondiente de acuerdo a las conversaciones que requiere tanto la oficina del PROCURADOR de PROFEPA como la del Secretario de SEMARNAT.

-

Hi Jim,
Our discussion about dyno coefficient discrepancy has been resolved and your lab numbers look correct. We originally provided incorrect coefficients values for Verify input. I will correct these values in Verify.
A decision from our factory whether to request a retest of the US06 cycle is still pending. We should have more information on Monday.

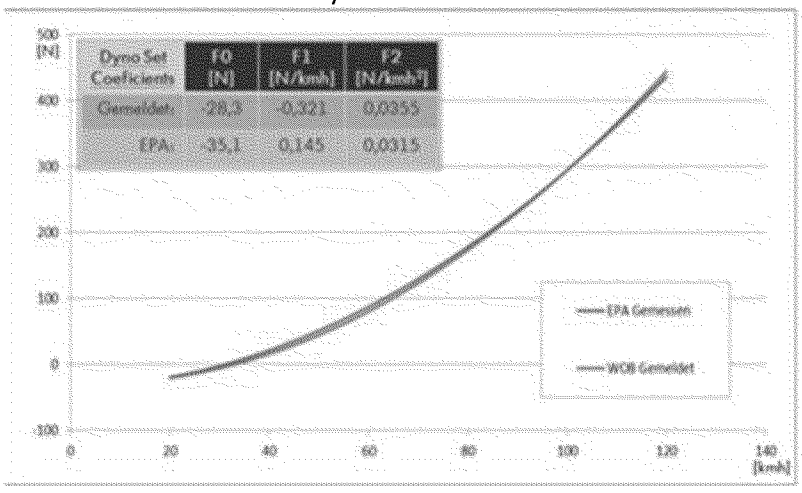
Cc: Ex. 7
Subject: A3 etron Vehicle book typo

Good morning Ex. 7

After a bit more analysis we have found the discrepancies between EPA/WOB dyno load adjustment. In the vehicle book the Dyno Set coefficients are actually for a Twin roll, not a single roll. Please see the correct values below and update verify if necessary.

16" Twin Roll	-133,5/-0,247/0,0323
16" Single Rol	-53,5/-0,247/0,0323
17" Twin Roll	-108,3/-0,321/0,0355
17" Single Roll	-28,3/-0,321/0,0355

The EPA Road Load appears to be fine when compared to the correct values, so no further discussion about Roadload is necessary:



Thanks for the help,

WATCH THE FREE WEBINAR RECORDING

The impact of the latest VW revelations

Dear Justin,

Please find below a link to watch our recent record-breaking Integer webinar (we had over 760 attendees in less than 24 hours) exploring the impact of the VW defeat device revelations and what this means for the market.

Simply click here to watch the free recording >>
(you will need to fill in a mini-form before you can launch the presentation, but this only takes a minute)

Need to know more? Purchase the slides and Excel data for $100 >>
Owing to the huge demand across the industry and from investors for our webinar, and the hundreds of questions we were asked during the session, Integer is also making the full colour Powerpoint slides and charts, plus an accompanying Excel data file available to purchase on our website. These provide analysis and data on:

- Emissions standards in the US and in the EU
- How diesel vehicles are tested in the US
- What tests on real driving conditions have shown
- EU passenger car sales by OEM and engine type 2011-2015
- North American Passenger car and light duty vehicle sales 2011-2015
- OEM diesel sales strategy development and forecast to 2020

Personal consultations also available
Adam and I are also available for personal consultations and briefings to answer any further questions you may have (or need to report on internally). This really is a significant development for the future of diesel engines and emissions control technologies, and we look forward to helping you plan and understand the impacts in the short-, medium- and long-term. Simply reply to this email to arrange your expert briefing with us.

We hope you find the recording useful and look forward to hearing from you or seeing you at the Integer Emissions Summit in Chicago, October 27-29.

Subject: Autoreview Newspaper Request: VW defeat device

Dear Cristine,

Dear Kaul,

Hello!

This is Sergey Znaemsky from Autoreview Russian Newspaper writing you. We are very thrilled by the investigation on VW defeat devices. Our newspaper https://en.wikipedia.org/wiki/Autoreview is known for series of independent crush-tests and fuel consumption tests. We run our own AR-CAP passive safety rating http://autoreview.ru/arcap/ for almost 15 years and we also evaluate cars in Russia on fuel economy with our own ARDC (Autoreview Driving Cycle) which is more relevant to real driving conditions then european NEDC and US FTP. I also need to say that our chief editor Michael Podorozhansky is the long time member of european Car of the Year Committee and our deputy-in-chief editor Leonid Golovanov is the juror of The International Engine of the Year.

So we are very interested in your conclusions regarding VW and going to evaluate diesel cars here in Russia. For this reason could you please provide us some additional info on your investigation.

The questions are below:

— How do you measure 10-40% increase in emissions when defeat device is not active? We understand that there is always a huge difference between real life consumption/emission data and test results, but this is well explained by test procedure itself (lower speed and acceleration rates). In our understanding to detect the defeat device affect you need to run vehicle in through a very similar to FTP driving cycle which has the same speeds and acceleration but somehow in different consequence to bypass the defeat device activation and reveal the difference between results with and without illegal software. Did you do so? Is 10-40% difference corresponds to this cycles or to FTP and «real-life» road driving?

— Does defeat software activate by any plugged-in testing devices or by the driving cycle itself — just when vehicle starts to warm-up and drive in accordance with FTP?

— Who is «driving» the car during your tests is it robotic driver, computer program or human driver?

— How defeat device affect the performance of the car? Can driver feel any difference in throttle response or power output?

— Did you test VW cars for defeat device activation at other testing cycles (NEDC for example)?

— Did you test other VW engines? Are you sure they don't have the same software?

— Why defeat device applied to the 2.0 TDI? Do you have any explanation why this software is used especially on this engine?

— Did you test diesels from other OEMs? There was media buzz that BMW diesels passed test and real life driving evaluation without any suspicious difference in results — is it true?

Guess that would be enough questions for the beginning)

We are waiting for your response.

Thank you in advance!

Best regards,

Sergey Znaemsky

EPA Update on Recent Volkswagen Announcement

WASHINGTON – Today the U.S. Environmental Protection Agency (EPA) released a letter sent to vehicle manufacturers notifying them that the agency is adding to its confirmatory testing additional evaluations designed to look for potential defeat devices.

View the letter here: http://www3.epa.gov/otaq/cert/violations.htm

Last Friday, EPA sent a Notice of Violation of the Clean Air Act to Volkswagen AG, Audi AG, and Volkswagen Group of America, Inc. alleging that four-cylinder Volkswagen and Audi diesel cars from model years 2009-2015 include software that circumvents EPA emissions standards.

These cars contain software that turns off emissions controls when driving normally, and turns them on when the car is undergoing an emission test. Known as a "defeat device," this design feature results in the cars emitting up to 40 times the amount of NOx emissions that the standards allow. NOx standards are in place to ensure public health is protected.

EPA's notice of violation, along with an In-Use Compliance Letter that the California Air Resources Board issued, provide information and details relating to the VW violations:

Hi John,

Below are some questions that we received from OMB on the FY 17 budget. We need your assistance to answer Question #3.

Please send your response to us by COB Monday, September 28.

-

Civil Enforcement

- Please provide a breakdown of all of the Next Generation Compliance projects including cost estimates from FY2014 enacted, FY2016 Pres Bud, FY2017 OMB, the difference between FY2016PB and FY2017 OMB, and the program project area.

- What will the 155.0 reduction in legal support for civil enforcement cases mean for the program?

- Do you have an estimate for how much additional work the VW case will produce?

- For the change in fixed costs, please provide a breakdown of what that goes towards, salary adjustments, essential workforce support, etc.

Thank you,

Francine Strickland

Thanks for sharing this Erica. I think what they mean about (not relevant) is that the vehicles in question were deliberately designed to "defeat" the test cycle and emission standard----so even if they had the same cycle and standard as the US they would stiff be facing the same problem

Subject: Some European Reactions to VW News

Hi all,

Please see interesting links and the FAQ sheet (scroll down) the Commission put out. I also had to reattach my favorite video clip from Parliament for those of you to whom I have not yet sent it. In the FAQs, I found this highlighted statement particularly interesting. I would be interested to know why these differences are "not relevant"?

"Test cycles are different in the EU and US. In the US there are several test cycles while in the EU there is only one. However, the differences in the test cycles are not relevant, since any laboratory test cycle can be defeated. As for the emission limits for NOx, in the US it is 50mg per mile, while in the EU it is of 80mg per km but also this difference is not relevant for the existing case."

I must say I am glad that Europe is finally being taken to task for their air problems. The air

pollution coupled with the "we are greener than the U.S." attitude has been irking me since the day I arrived. I thought I would get to escape bad air after China.

Hope you are all well!

All the best!

Erica

European Commission - Fact Sheet

FAQ - Air pollutant emissions standards

Brussels, 25 September 2015

How are pollutant emissions regulated at EU level?

Directive 2007/46/EC provides a common legal framework for the type approval of cars, vans trucks, buses and coaches. Type approvals are subject to fully harmonised EU requirements under:

- legislation defining the emission limits, such as Regulation 715/2007/EC - approved by the European Parliament and the Council;

- implementing legislation defining the test procedures - reviewed according to comitology procedure by the technical Committee for Motor Vehicles (TCMV) where all Members states are represented.

The Euro 5 and 6 Regulation 715/2007/EC, agreed by the European Parliament and Council, specifies emission limits for all important toxic pollutants. These include nitrogen oxides (NOx, i.e. the combined emissions of NO and NO2). The currently applicable NOx emission limit for new diesel passenger cars and light vans sold in the EU is 80 mg/km.

What is the Commission doing to address shortcomings of emissions testing of diesel vehicles?

Currently emissions are measured on a laboratory test cycle (NEDC) which does not reflect the emissions of vehicles in normal driving conditions. The Commission has therefore been working intensely to develop robust procedures for the emission testing of vehicles in real driving. Currently nitrogen oxides (NOx) emissions of diesel vehicles measured on the road may in reality exceed substantially the emissions measured on the regulatory test cycle (NEDC), though in most cases probably in line with the applicable legislation. To address this shortcoming, the Commission has been working to develop Real Driving Emission (RDE) test procedures. They replace the current laboratory based testing and will assess the emission performance of vehicles on roads. The new procedure was voted in May 2015 by the respective regulatory committee (Technical Committee for Motor Vehicles, TCMV) where all Members states are represented, and it will come into force in January 2016.

How will the RDE test procedure work? Will it eliminate the risk of cheating with a defect devices?

The RDE procedure will complement the laboratory based procedure to check that the emission levels of nitrogen oxides (NOx), and at a later stage also particle numbers (PN), measured during the laboratory test are confirmed in real driving conditions. This means that the car will be driven outside and on a real road according to random acceleration and deceleration patterns. The pollutant emissions will be measured by portable emission measuring systems (PEMS) that will be attached to the car. RDE testing will reduce the currently observed differences between emissions measured in the laboratory, and those measured on road under real-world conditions, and to a great extent limit the risk of cheating with a defeat device.

When will the RDE test procedure be in force?

In May 2015 the new procedure received a positive vote from the Technical Committee for Motor Vehicles, where all Members states are represented, and it will come into effect in January 2016. In this initial stage the portable emissions system will be used for monitoring purposes and it will have no implications on the conformity certificate issued by the national type-approval authority (TAA). Work is now underway to establish the regulatory not-to-exceed (NTE) emission limits applicable in RDE testing. These limits define the acceptable small degree of deviation from the emission limit set in Regulation 715/2007/ECto take into account measurement uncertainties present in the on-road testing. The NTE approach has proven its robustness in the assessment of, for example, emissions form heavy-duty vehicles. Other elements that are being discussed are test boundary conditions, such as temperature, altitude or velocity. All the details related to the RDE procedure for passenger cars and vans are currently being discussed with stakeholders and Member States. The Commission services aim to have the not-to-exceed emission limits applicable for all type approvals in the autumn 2017 and for new vehicles in the autumn 2018. The not-to-exceed limits should reflect environmental objectives as well as economic and technical feasibility.

What does WLTP stand for?

A new test procedure, the Worldwide harmonized Light vehicles Test Procedures (WLTP), has been adopted in the United Nations system (UNECE) for measuring pollutant emissions and CO2 emissions from passenger cars and light commercial vans in the laboratory. The implementation process in the EU

has started in parallel. The focus of the improvements is CO2 emissions testing. For NOx, RDE testing will complement laboratory test procedures.

Who is responsible for the emission testing?

Before vehicles can be put on the market, they are tested by a national technical service in accordance with the EU legislation. The national type-approval authority (TAA) grants the approval on the basis of these tests. The manufacturer may make an application for approval in any EU country. Once approved in one Member State, all vehicles of its type may be registered throughout the EU. The type approval legislation requires that cars meet the limit values 'under normal conditions of use'. In practice this requirement is implemented by establishing a test cycle to put the car through its paces, and checking whether the cycle emissions are below the limit value. Any car whose emissions are below the limit value is fit for type approval. The detailed description and rules for these test are laid down in the implementing legislation pursuant to the Euro 5/6 Regulation 715/2007/EC. The same monitoring system will continue to apply for the RDE testing and the portable emission measurement system.

Who checks that national authorities actually carry out the tests correctly?

Market surveillance and control of compliance with the type-approval legislation is a competence of the Member States. Article 30 of theFramework Directive requires Member States to take all the necessary measures to ensure that vehicles conform to their type-approval and Member States other than the Member State which granted the type-approval can do their own tests if they feel that here is a breach of the legislation. If a Member State demonstrates that there is a problem, it may ask the Member State which granted the type-approval to take corrective measures.

Are there any emissions tests after the vehicle has been type approved?

In accordance with type-approval legislation, vehicles are subject to checks on conformity of production and also to measures to ensure in-service conformity. Conformity of production tests are carried out on samples of freshly produced vehicles and ensure that their emissions values are in-line with the ones measured at type-approval. In-service conformity tests are carried out on vehicles that have been in use for a certain number of kilometres or years to ensure that they still have a pollution performance that is within a certain margin of the type-approval values. The procedure used for both tests is the same laboratory test that was done for type-approval.

Can the EU impose penalties if the rules regarding type approval are violated?

Under the Euro 5/6 legislation, it is for the Member State which has type-approved a vehicle to impose penalties for breach of the type-approval procedure. In particular, if it were determined that a car type-approved in a Member State had been modified to beat the cycle, the Member State which type-approved the car would be responsible for imposing penalties. More specifically, article 30(1) of Directive2007/46/EC states that if a Member State which has granted an EC type-approval finds that new vehicles do not conform to the type it has approved, it shall take the necessary measures, including, where necessary, the withdrawal of type-approval, to ensure that production vehicles are brought into conformity with the approved type. In addition, Article 46 of the same Directive requires Member States to

determine the penalties and to take all necessary measures for their implementation.

Are defeat devices illegal in the EU?

Yes. Defeat devices are forbidden in the EU. Article 5 (2) of Euro 6 Regulation 715/2007/EC prohibits the use of defeat devices. Article 3(10) defines defeat device as any element of design which senses temperature, vehicle speed, engine speed (RPM), transmission gear, manifold vacuum or any other parameter for the purpose of activating, modulating, delaying or deactivating the operation of any part of the emission control system, that reduces the effectiveness of the emission control system under conditions which may reasonably be expected to be encountered in normal vehicle operation and use.

Is the Commission going to improve market surveillance? Should we have an independent supervisory authority?

The Commission is speeding up work on a more robust framework to take action against non-compliant and unsafe products. The focus is on clarifying and strengthening the recall system and the exchange of information among type-approval authorities, including by requiring Member States to organise and carry out market surveillance and controls of vehicles entering the market and also strengthening the safeguard and recall provisions, including more power for the Commission to intervene and decide on the remedial measures taken by Member States. These measures are included in a proposal for revision of the general type-approval framework that the Commission will adopt by the end of the year. The new market surveillance rules will clarify the responsibilities of economic operators and streamline the procedures for co-operation and information exchange between the Member States.

Why did the Commission decide to introduce RDE testing?

Once it became clear that the test procedure set out in Regulation 715/2007/ECand its implementing legislation was not reflecting real driving emissions of vehicles, the European Commission decided in 2010 to address this situation by complementing the current laboratory test with a real-driving test procedure, which should be able to capture the wide range of driving conditions encountered on the road. A "real-driving emissions of light duty vehicles" working group composed by industry stakeholders and Member States representatives was set up to develop a test procedure to directly assess the regulated emissions of light duty vehicles under real driving conditions. In the course of the work of the working group, two candidate procedures were investigated: a randomised test cycle and the use of portable emission measurements systems (PEMS). Following an in-depth analysis of both approaches, on-road testing with a portable device was judged to better cover the wide range of driving and ambient conditions than laboratory test cycles. As soon as the new procedure was ready from the technical point of view, the Commission proposed draft legislation which was voted in May 2015 by the respective regulatory committee (TCMV).

How does regulation differ in the EU and US both on emission limits and on testing procedures?

In the US, the Clean Air Act (CAA) requires every engine and motor vehicle to meet a set of emission standards and conformity requirements. Anyone wishing to sell an engine or vehicle within the United States must demonstrate compliance with the CAA and all applicable EPA regulations. Today, in the EU

as well as in the US, vehicles are being tested on a chassis dynamometer in the lab according to well-described driving patterns (= regulatory test cycles) for compliance with regulatory emission limits. Test cycles are different in the EU and US. In the US there are several test cycles while in the EU there is only one. However, the differences in the test cycles are not relevant, since any laboratory test cycle can be defeated. As for the emission limits for NOx, in the US it is 50mg per mile, while in the EU it is of 80mg per km but also this difference is not relevant for the existing case. This is why the introduction of the RDE procedure is so important, as it would allow authorities to detect the use of defeat devices.

What are the applicable limits for CO2 emissions?

Unlike pollutants, at low concentrations CO2 emissions are not directly harmful to our health, but cause climate change. That is why the EU is reducing its CO2 emissions, including from transport. In contrast to pollutant emissions, for CO2 emissions there are no maximum limits per vehicle. But CO2 emissions are monitored and EU Regulations 443/2009 and 510/2011 establish CO2 performance standards for cars and vans and emission reduction targets. By 2021, the fleet average to be achieved by all new cars is 95 grams of CO2 per kilometre. This means a fuel consumption of around 4.1 l/100 km of petrol or 3.6 l/100 km of diesel. For vans, the target is 147 grams of CO2 per kilometre, corresponding to around 5.5 l/100 km of diesel. To help drivers choose new cars with low fuel consumption, cars have a label showing their test cycle fuel efficiency and CO2 emissions. If defeat devices were used to influence test CO2 emissions, it is likely the relative size of their impact would be lower than for pollutant emissions. For CO2 emissions the laboratory test procedure should improve with the introduction of the "Worldwide harmonized Light vehicles Test Procedure".

What is the Commission doing to tackle air pollution?

The Commission adopted a Clean Air Policy Package in December 2013, consisting of new air quality objectives for the period up to 2030, a revised National Emission Ceilings Directive with stricter national emission ceilings for the six main pollutants (SO_2, NOx, non-methane VOCs, NH_3, PM2.5 and CH_4), and a proposal for a new Directive to reduce pollution from medium-sized combustion installations. The local air quality limits which may not be exceeded are set under the Ambient Air Quality Directives. The Directives address three main pollutants, particulate matter (PM10) originating from emissions from industry, traffic and domestic heating, sulphur dioxide (SO2) and nitrogen dioxide (NO2). Infringement procedures in this area are about the exceedances of the limit values which are measured at the monitoring stations in each Member State and appropriate measures to comply with these limit values.

How does the EU inform citizens about the consequences of air pollution and car emissions?

EU legislation foresees that Member States must ensure that up-to-date information on ambient concentrations of the different pollutants is routinely made available to the public. When information or alert thresholds are exceeded, Member States need to inform the public about the exceedance and the actions that are eventually taken. To facilitate consumer choice, citizens will also be informed of the real-world vehicle emissions measured according to the new test cycle (from the Euro 6 deadlines onwards). At EU level a number of sources exist that provide information to the public. Several important databases concerning air quality are managed by the European Environment Agency (EEA), including the AirBase database, the database on ozone. The Ambient Air Quality Portal contains a collection of documents delivered by each country, concerning various topics, including air quality.

Subject: RE: EPA Update on Recent Volkswagen Announcement

Hi Julia -

Thanks for this. I have two quick follow-ups confirming details from the press call just now:

- In his prepared remarks, I think Chris Grundler gave a number what percentage of light-duty diesel vehicles on the road are made up of the VW and Audi vehicles. I didn't quite catch that number - would you mind sending what that was?
- Also, to confirm, it sounded like EPA was confirming in the call that recalls would indeed be coming for the vehicles that were found to be in violation of the CAA. I'm just writing to confirm that this is the case, and that the timeline was that it would happen within about a year.

Thanks so much.

Best,

Alan

FOR IMMEDIATE RELEASE

September 25, 2015

EPA Update on Recent Volkswagen Announcement

WASHINGTON – Today the U.S. Environmental Protection Agency (EPA) released a letter sent to vehicle manufacturers notifying them that the agency is adding to its confirmatory testing additional

evaluations designed to look for potential defeat devices.

View the letter here: http://www3.epa.gov/otaq/cert/violations.htm

Last Friday, EPA sent a Notice of Violation of the Clean Air Act to Volkswagen AG, Audi AG, and Volkswagen Group of America, Inc. alleging that four-cylinder Volkswagen and Audi diesel cars from model years 2009-2015 include software that circumvents EPA emissions standards.

These cars contain software that turns off emissions controls when driving normally, and turns them on when the car is undergoing an emission test. Known as a "defeat device," this design feature results in the cars emitting up to 40 times the amount of NOx emissions that the standards allow. NOx standards are in place to ensure public health is protected.

EPA's notice of violation, along with an In-Use Compliance Letter that the California Air Resources Board issued, provide information and details relating to the VW violations:

View a pdf of the Notice of Violation here:

GM-Vella Meeting 09 28 2015 FINAL.doc
ATT00003.htm

Chris,

Attached is the briefing memo for the Administrator for her Monday meeting with EU Commissioner Vella. We understand that general mobile source cooperation make not be on the EU's final agenda but we still expect they will have some questions on the VW case. The tps on VW are from the NOV and some Qs and As that we have.

There is a lot of info in here on other topics as well.

Thanks,
Jim

FOR IMMEDIATE RELEASE

September 25, 2015

EPA Update on Recent Volkswagen Announcement

WASHINGTON – Today the U.S. Environmental Protection Agency (EPA) released a letter sent to vehicle manufacturers notifying them that the agency is adding to its confirmatory testing additional evaluations designed to look for potential defeat devices.

View the letter here: http://www3.epa.gov/otaq/cert/violations.htm

Last Friday, EPA sent a Notice of Violation of the Clean Air Act to Volkswagen AG, Audi AG, and Volkswagen Group of America, Inc. alleging that four-cylinder Volkswagen and Audi diesel cars from model years 2009-2015 include software that circumvents EPA emissions standards.

These cars contain software that turns off emissions controls when driving normally, and turns them on when the car is undergoing an emission test. Known as a "defeat device," this design feature results in the cars emitting up to 40 times the amount of NOx emissions that the standards allow.

NOx standards are in place to ensure public health is protected.

EPA's notice of violation, along with an In-Use Compliance Letter that the California Air Resources Board issued, provide information and details relating to the VW violations:

View a pdf of the Notice of Violation here:

http://www3.epa.gov/otaq/cert/documents/vw-nov-caa-09-18-15.pdf

View the California Air Resources Board's In-Use Compliance Letter here:

http://www.arb.ca.gov/newsrel/in_use_compliance_letter.htm

For more information on EPA's recent action, as well as information for owners of the affected vehicles, visit: http://www3.epa.gov/otaq/cert/violations.htm

Subject: Mary N on international harmonization

Nichols also said she saw the need to re-examine and possibly coordinate vehicle emissions testing internationally.

"There's been for years discussion about aligning the testing and procedures of the U.S. and Europe and the emerging markets in China and India," she said. "Some countries use an old, outdated version of our testing or the E.U.'s testing."

Nichols said it should be relatively easy to fix the software to make the cars control their nitrogen oxide emissions in all conditions.

"They have to reprogram the software and get rid of the defeat device, which is a set of instructions; that part is not really difficult," she said. "You still have to implement it; [you've] got to get people to bring their cars in and you've got to get the work done, so it's not going to happen instantaneously, but certainly we know how to do that."

Still unclear is whether controlling NOx emissions will reduce the cars' gas mileage, as well as what motivated Volkswagen to write the software workaround.

"People are really trying to understand what the total motivation here was because it affected a number of different models," Nichols said.

Cc: Ex. 7
Subject: A3 etron Vehicle book typo

Good morning Ex. 7

After a bit more analysis we have found the discrepancies between EPA/WOB dyno load adjustment. In the vehicle book the Dyno Set coefficients are actually for a Twin roll, not a single roll. Please see the correct values below and update verify if necessary.

16" Twin Roll	-133,5/-0,247/0,0323
16" Single Rol	-53,5/-0,247/0,0323
17" Twin Roll	-108,3/-0,321/0,0355
17" Single Roll	-28,3/-0,321/0,0355

The EPA Road Load appears to be fine when compared to the correct values, so no further discussion about Roadload is necessary:

Press Call: 9/25/2015

Release of Auto Manufacturer Expanded Testing Guidance Letter

Final Remarks as Prepared

Janet McCabe, Acting Assistant Administrator, Office of Air and Radiation, U.S. EPA

- Last Friday, EPA sent a Notice of Violation of the Clean Air Act to Volkswagen AG, Audi AG, and Volkswagen Group of America, Inc. alleging that four-cylinder Volkswagen and Audi diesel cars from model years 2009-2015 include software that circumvents EPA emissions standards.

- Put simply, these cars contain software that turns off emissions controls when driving normally, and turns them on when the car is undergoing an emission test.

- Known as a "defeat device," this design feature results in the cars emitting up to 40 times the amount of NOx emissions that are allowed to ensure public health is protected.

- EPA's notice of violation, along with an In-Use Compliance Letter that the California Air Resources Board issued, provide information and details relating to the VW violations.

VW FOIA, EPA 06/20/2017 2017-FFP_026660

- As we stated last week, these violations are very serious. Not only because the illegal defeat device results in excess emissions many times the allowable standard, but also because VW was concealing the facts from EPA, the State of California, and from consumers.

- Given the seriousness of this situation, we are having this call today in order to provide an update on our work and next steps.

- Today's update does not affect our current investigation of VW.

- That investigation continues, and the reasons for it are spelled out in our notice of Violation that we issued last week.

- Today's update is to inform you all about a letter to all auto manufacturers that we are sending today.

- This letter is intended to notify all automakers that we are stepping up our testing activities in response to VW's alleged violations.

- We take seriously our responsibility to oversee the implementation and enforcement of our clean air regulations. It is this oversight that ensures both the benefits of clean air emissions standards and that the industry is competing on a level playing field and that consumers are getting what they pay for.

VW FOIA, EPA 06/20/2017 2017-FFP_026661

- Our regulatory programs for cars and trucks are working. We know this because air quality monitors tell a clear and compelling story: U.S. air quality has dramatically improved as a result of implementing our program, even as vehicle miles and the economy have grown significantly.

- EPA and California's joint implementation of our motor vehicle programs have been very successful at delivering on our agencies' missions to protect human health and the environment.

- Both EPA and California have robust oversight programs that have adapted as technologies and circumstances have changed.

- But we also know, and the VW violations before us now have made it all the clearer, that we must continue to improve and adapt our oversight. And we will.

- I will now turn to Chris Grundler, EPA's Director of our Office of Transportation and Air Quality, who will provide some information about our current approach to vehicle emissions compliance, along with a few other relevant updates.

Chris Grundler, Office Director, Office of Transportation and Air Quality, U.S. EPA

- EPA's compliance program for cars and trucks is at the heart of ensuring that the Agency delivers on the promise of the Clean Air Act.

- EPA has a well-established process in place for certifying that new vehicles meet federal emission standards for air pollutants. This program, which includes new car testing and audits, ensures that cars are compliant with our clean air regulations.

- All new cars sold in the United States must have an EPA-issued "certificate of conformity." It is not legal to sell a new car in the U.S. without such a certificate.

- Neither CARB nor EPA allow manufacturers to self-certify. Volkswagen does not have a 2016 model year EPA Certificate of Conformity or a CARB Executive Order for its four cylinder diesel vehicles because CARB and EPA are not yet convinced that the data and evidence presented by Volkswagen demonstrate the vehicles will perform as required by the regulations.

- Experienced engineers and scientists at the two organizations review manufacturer applications for certification, request additional evidence, and perform confirmatory tests on a portion of the vehicles before reaching a decision to approve or deny an application.

- Manufacturers must attest to the accuracy and integrity of the data and other documentation they submit. They face severe penalties if they are found to have misled the agencies.

- The agencies have broad discretion to require manufacturers to conduct additional testing under section 206 of the Clean Air Act, or to conduct tests on their own to verify vehicle performance with the emission regulations.

- If EPA believes that vehicles are not compliant, we do not certify them, and they cannot be sold. Ultimately it is this action that held VW to account.

- Beyond reviewing design and emissions information, as part of our ongoing compliance oversight, EPA tests vehicles we borrow from private owners to ensure that they match the certified design and align with data submissions. In addition, we perform audits of vehicles selected at random from manufacturer production lines to help confirm fuel economy and GHG performance. Finally, we perform in-use investigations using Portable Emissions Measurement Systems (PEMS) to evaluate vehicle performance on the road.

- EPA also is responsible for much of the original development of portable emissions monitoring technology – the kind of equipment that West Virginia University used to test the VW and BMW vehicles in 2014 that led to the discovery of high emissions from VW diesels.

- We use this same equipment ourselves to conduct real world emissions testing every year. In recent years, though, EPA has focused its portable emissions testing efforts primarily on the heavy-duty diesel truck market whose annual NOx emissions dwarf the inventory from light-duty diesels (LD diesel passenger cars make up less than 0.2% of on-highway diesel NOx emissions)

- Why? Because that's where most diesel emissions are. It's also an area where we have seen industry employ defeat devices in the past. Every year we make

decisions about where to prioritize our limited testing resources, and we prioritize based on, among other things, where the emissions are greatest.

- WVU and ICCT chose light duty diesel cars like VW's for their testing precisely because they believed these vehicles would be clean. These vehicles make up less than 1 percent of the US light-duty fleet.

- As soon as the testing showed they were not clean, CARB took the lead in coordination with EPA took on the issue, which led us to where we are today.

- EPA and California's oversight programs are active and robust, as our recent actions to address issues with Hyundai, Kia and Ford vehicles demonstrate.

- But technologies evolve and circumstances change, and we are continuously looking at ways to improve our compliance and oversight programs. In the past, we have added new procedures, like high-speed driving and air-conditioning use, to ensure our lab tests better replicate real-world driving conditions

- And we will continue to adapt. As EPA Administrator McCarthy said a few days ago, we are "upping our game."

- Today we are putting vehicle manufacturers on notice that our confirmatory testing is now going to include additional evaluations designed to look for potential defeat devices.

- We aren't going to tell them what these tests are, they don't need to know. They only need to know we will be keeping their vehicles longer and driving them more.

- We will be continuing to review with our partners at the California Air Resources Board what we can learn from this VW case and will adapt and improve as we always have to ensure we deliver on the Agency's mission.

NEXT STEPS

- Now let me provide you with a brief update of other steps related to the VW matter.

- We are actively recruiting light duty diesel vehicles to test for defeat devices or other compliance issues.

- This testing is starting now, in concert with testing by the California Air Resources Board and Environment Canada.

- Many of these same vehicles are sold in Canada as well as the US. We are very pleased that Environment Canada will be an active partner in this effort allowing us to more quickly test all light-duty diesel makes and models for potential defeat devices.

- Turning to next steps to address the affected vehicles

- First, we should be clear that since the discovery of the defeat device we have not issued a recall order to Volkswagen or Audi.

- The California Air Resources Board (CARB) and EPA are working intently with Volkswagen to evaluate potential recall solutions for the affected vehicles.

- The September 18, 2015 Notice of Violation and CARB In-Use Compliance letter cover three generations of Volkswagen four cylinder diesel vehicles. We expect solutions will be found relatively quickly for the most recent generation (all model year 2015 vehicles) and soon thereafter for the 2012-2014 VW Passat diesels

- We expect the first generation of vehicles (all pre-2015 vehicles except for the Passat) will require additional engineering development that will take longer.

- The agencies will evaluate the technical solutions that Volkswagen develops to ensure their emissions performance is improved in real world driving and will carefully scrutinize for impacts on consumers.

- As the engineering work progresses, the Agencies and Volkswagen will communicate timelines for the recalls and the nature of the solutions.

- If you are an owner of an affected Volkswagen or Audi diesel vehicle you should know that when a recall is ordered the notice will come from Volkswagen. It will provide you with information about the recall and with instructions about how to get your car repaired at no cost to you.

- In the meantime, these cars are safe and legal to drive. Owners do not need to take any action at this time.

- We will continue to update you as our investigation continues.

AIR POLLUTION:
EPA boosts auto emissions testing after Volkswagen scandal

Sean Reilly, E&E reporter

Published: Friday, September 25, 2015

U.S. EPA officials today said they are ramping up emissions testing across the auto industry, seeking to regain public confidence after last week's revelation that Volkswagen had gotten away with cheating for years.

In a **letter** sent today to all car manufacturers, the agency said it may require testing on any vehicle under real-world driving conditions with the goal of detecting "defeat devices" similar to what VW has admitted to using on four-cylinder diesel-fueled vehicles from model years 2009 through 2015.

Although improved air quality over the years shows the existing regulatory framework is working, "we must continue to improve and adapt our oversight, and we will," Janet McCabe, EPA's acting air chief, told reporters in a conference call this morning.

The agency is collaborating with the California Air Resources Board and its Canadian counterpart, Environment Canada, to test VW diesel models already on the road for the defeat devices, said Chris Grundler, director of EPA's Office of Transportation and Air Quality.

EPA and California regulators are also working closely with Volkswagen, Grundler said, to come up with "recall solutions" for the 482,000 VW and Audi diesel vehicles covered by the violation notice issued Friday. Affected models include the Jetta, Beetle, Golf, Audi A3 and Passat.

The scandal, which could cost Volkswagen billions of dollars in fines just in the United States, has already forced the resignation of Martin Winterkorn, the CEO of Volkswagen AG, and led the company to ask German prosecutors to open a criminal investigation. Replacing Winterkorn is Matthias Müller, the current chairman of Porsche AG, Volkswagen's board announced today.

It also has raised questions about the adequacy of EPA's testing regimen, given that the cheating was uncovered not by its staff, but by West Virginia University researchers working for the International Council on Clean Transportation, a private nonprofit group.

On today's call, Grundler said EPA had developed the testing technology used

by the West Virginia researchers, adding that the agency has focused its real-world testing on heavy-duty diesel trucks that generate far more nitrogen oxide emissions than light-duty cars. The software Volkswagen used to circumvent emissions requirements was buried in 100 million lines of code, he added.

At the Safe Climate Campaign, which has been critical of the existing regimen, Director Dan Becker said the added testing announced today makes sense but is "only a very initial step."

"EPA is going to have to move to bring testing in-house," Becker said in a phone interview. "They are going to have to essentially take the automakers out of the process of doing self-testing, then reporting some of the results -- or false results to EPA."

In an email, a spokesman for the Alliance of Automobile Manufacturers, whose members include VW's American arm, would only say the trade group is certain that all carmakers will review the new EPA guidance.

In a statement, a spokeswoman for the Association of Global Automakers, the trade group representing many foreign car manufacturers -- although not Volkswagen -- said "the integrity of the emissions and fuel economy testing certification process is very important to our industry," adding that it will keep working with state and federal regulators to ensure "that the process achieves the objectives of the regulators, manufacturers, and consumers."

Hi Dave;

As your requested, attached is a sample of the fuel economy label for the 2106 Audi A3 e-tron ultra. Please let me now if you have any concerns and that all the required data has been properly displayed. The factory has told me that it is a non-blended PHEV, I believe this point was already pointed out to EPA in an A3 e-tron presentation in early August.

Best regards,

Richard

Dear Ex. 7 dear Karl, dear Ex. 7
attached you find a app for Android tablets which allows to drive on roads different drive cycles. It was impossible to implement the app for ipad due to limitations for the bluetooth connections. It can be used to detect defeat devices. In the ladt 5 days I gave numerous interviews in television, radio and newspaper about VW but also other manufactures. You need the cycles CSV file. As an example I add the NEFZ CSV file. If you have any questions don't hesitate to contact me.
Have a nice weekend.

Axel.

ps. I hold the license for the app. Don't distribute without notice to me..

MAIL_CONVERSATION_TOPIC: 8 Seriously Undervalued Cars That Should Be Classics
Created: Fri 3/18/2016 6:18:09 PM

There's a reason why a vintage Porsche 911, Shelby Mustang GT350, or E-Type Jaguar will command sums greater than your mortgage. Not all cars are created equal, and as a general rule, time sorts out the brilliant automobiles from the rolling appliances in the form of the open market. Strangely, though, some cars slip through the proverbial cracks and go for prices ranging from reasonably affordable to dirt-freaking-cheap. Here are just eight of those cars, all of which are seriously undervalued despite possessing the depth of character normally associated with vaunted classics. There's a reason why a vintage Porsche 911, Shelby Mustang GT350, or E-Type Jaguar will command sums greater than your mortgage. Not all cars are created equal, and as a general rule, time sorts out the brilliant automobiles from the rolling appliances in the form of the open market. Strangely, though, some cars slip through the proverbial cracks and go for prices ranging from reasonably affordable to dirt-freaking-cheap. Here are just eight of those cars, all of which are seriously undervalued despite possessing the depth of character normally associated with vaunted classics. Just make sure they don't have leather seats. More: 8 Ways Your Mechanic Is Ripping You Off 1. Chevrolet Corvair Monza Years: 1960-69 General value today: $12,000 Why it should be more: The Corvair is one of the most unique American cars ever produced. With an air-cooled flat-six engine (turbocharged in later models) mounted in the back, it had more in common with the then-new Porsche 911 than contemporary American muscle cars. Chevy offered the Corvair in a variety of body styles, but the Corvair Monza is the muscle car-esque coupe that would've been a classic by now, if not for an all-time PR nightmare when Ralph Nader claimed that it was "unsafe at any speed." The NHTSA exists in part because of this car, but if you're interested in owning and driving a classic car, it's a fine piece of machinery that by rights should fetch double what it does today. More: 15 Lies You've Been Told About Cars 2. Buick Reatta Years: 1988-1991 General value today: $4,000-6,000 (coupe) or $13,000-15,000 (convertible) Why it should be more: The oft-forgotten Buick is an outlier: it was a handbuilt two-seater designed to restore luster to the Buick name, and came with advanced features like a touchscreen dash... back in 1988. Today, there's a small but fervent group of Reatta fans that rally around the car and support each other when the need for parts arises, and there's even a Reatta-only salvage yard in Arizona that eerily stands as a memorial. 3. BMW E39 540iT M Tech Year: 2003 only General value today: $15,000-20,000 Why it should be more: The BMW 540 in the late 1990s and early 2000s is a pretty righteous potential classic in its own right, but the 540i Touring (that's BMW-speak for station wagon) ups the uniqueness and coolness quotient exponentially. Add in the fact that only the 2003 M Tech received a M5-esque body kit from the factory along with a host of performance goodies, and you've got a legit, potentially collectible, and seriously quick, station wagon. With fewer than 300 brought into the U.S., this is as close as you'll ever get to investing in a sure thing, if you're lucky enough to find one for sale. 4. Volkswagen Corrado VR6/SLC Years: 1992-95 General value today: $3,000-5,000 Why it should be more: Nearly 200 hp under the hood in a car that weighs 2,800 lbs certainly isn't bad -- in terms of power-to-weight ratio, the Corrado was nipping at the heels of the very first BMW M3. It was also a fine handling car that beautifully bridged the maturity gap between the Golf and the Jetta. 5. Studebaker Avanti Years: 1962-63 General value today: $20,000 Why it should be more:

When it first debuted a couple of years before the Mustang, the Avanti was a state of the art V8 coupe with plenty of power, disc brakes to help slow things down, and seating for four. Its polarizing design is one that not many cars have rivaled before or since -- a feat made all the more impressive by an urban legend that it was sketched on a napkin during a flight. Sadly, the car debuted during a severely trying time for Studebaker, and less than 6,000 were made before the factory closed. In a strange twist, the Avanti lived a very long second life after new owners purchased the rights. Those subsequent Avantis, produced until 2006, were merely a shadow of the real deal, and likely aren't undervalued -- however low that value may be -- but the original is a true American classic. 6. Ford Thunderbird Turbo Coupe Years: 1984-88 General value today: $4-8,000 Why it should be more: It may have been Motor Trend's Car of the Year in 1987, but the Turbo Coupe was still Ford's best kept secret of the mid-1980s. With power figures eventually approaching 200 hp from a turbocharged 2.3 liter four cylinder that was shared by the much more famous Mustang SVO, the top-of-the-line Thunderbird was both a more luxurious version of its Mustang counterpart, and an American answer to European grand tourers of the day. For 1987-88 only, the Turbo Coupe received unique bodywork that made it stand out from the lineup, and is still a brilliant example of the best of 1980s styling. 7. Porsche 914 Years: 1969-76 General value today: $10,000-15,000 Why it should be more: The 914 was developed as a new entry-level sports car in the Porsche lineup beneath the 911, and also as a replacement for the VW Karmann Ghia. For those unfamiliar with it, the 914 is simply an oddly-shaped, forgotten Porsche. But to enthusiasts, the tiny 2,000-lb featherweight represents the pinnacle of well-balanced, lightweight, and low-powered sports cars. 8. First Generation (NA) Mazda Miata Years: 1989-97 General value today: $5,000 Why it should be more: Ask any car guy, and the Mazda Miata has been a classic since its inception, partly because it unabashedly takes its inspiration from classic British roadsters, but mostly because the well-balanced and super-light Miata is just so damn good. Still, with nearly a million MX-5 (Mazda Experiment project 5) Miatas on the road, the majority, sadly, are viewed pejoratively through a veil of cuteness.

Thanks for flagging this bill. I will get on it.

Sent from my iPhone

On Sep 25, 2015, at 4:14 PM, Charmley, William <charmley.william@epa.gov> wrote:

Dear all –

I know it is the end of a very, very, very long week, and I know that Byron, Janet, Erin and everyone has worked very hard to get all of the messaging right.

I wanted to point the following quote out because it makes no sense to me – and I saw it in a few different articles.

"Grundler says the EPA had deferred to European regulators on diesel emissions because diesels make up half the cars in Europe. The European Union became aware in 2010 that lab testing was not as accurate as on-road tests might be. In the case of carbon dioxide emissions tests — not nitrogen oxide — the discrepancy was as much as 20 percent."

EPA to Change Diesel Tests to Thwart VW-Like Cheating

•□□□□□□□ By matthew daly and tom krisher, associated press

WASHINGTON — Sep 25, 2015, 1:50 PM ET

The Environmental Protection Agency said Friday that it will launch sweeping changes to the way it tests for diesel emissions after getting duped by clandestine software in Volkswagen cars for seven years.

In a letter to car manufacturers, the EPA said it will add on-road testing to its regimen, "using driving cycles and conditions that may reasonably be expected to be encountered in normal operation and use, for the purposes of investigating a potential defeat device" similar to the one used by Volkswagen.

The testing would be in addition to the standard emissions test cycles already in place, the EPA said.

VW's sophisticated software allowed its cars to pass tests in the lab and then spew pollution into the atmosphere while on the highway. The changes announced Friday are designed to detect software and other methods automakers might use to rig a test.

"We're actually making sure that this is a one-off," EPA Administrator Gina McCarthy said Friday.

The agency is going to "look at all of the other models aggressively and do the testing we need to make sure there aren't any hidden software devices or other ways they could defeat the emission system," McCarthy said.

The revelations about VW led to unwanted scrutiny for the EPA. Its testing procedures have been criticized for being predictable and outdated, making it relatively easy for VW to cheat.

EPA did not initially uncover the problem; researchers at West Virginia University did, using on-road testing that EPA did not.

Sen. Bill Nelson, D-Fla., said he was frustrated that regulatory agencies such as the EPA are failing to protect the public. "Seven years is way too long a time that the EPA has been asleep at the switch," he said.

The VW case has similarities to those involving General Motors ' defective ignition switches and Takata Corp.'s exploding air bag inflators, where it also took years before those problems were disclosed to consumers, Nelson said.

"When there is this kind of deception, we've got to get these agencies to be able to cut through it and catch it," he said.

Chris Grundler, head of the EPA's office of transportation and air quality, defended the agency's testing procedures, noting that passenger vehicles with diesel engines account for far less than 1 percent of overall vehicle emissions of nitrogen oxides and other pollutants.

"It's not a question of equipment or technology or capability. It's a question of where we deploy those resources," Grundler told reporters Friday.

The EPA has conducted on-road testing on heavy duty trucks, rather than passenger cars, "because that's where the emissions are," he said. The additional testing announced Friday is part of a "continuous evolution of our oversight" of new and used cars and trucks, Grundler said.

VW has admitted to installing so-called defeat devices on Volkswagen and Audi cars with four-cylinder diesel engines. The devices switch on pollution controls when the cars are being tested, but turn off the controls when the software determines that the cars are back on real roads. The EPA says about 500,000 U.S. cars including the Jetta, Golf, Beetle, Passat and Audi A3 have the cheating software, and VW says a total of 11 million cars have it worldwide.

VW was able to fool the EPA because the agency only tested the cars on treadmill-like devices called dynamometers and didn't use portable test equipment on real roads. The

software in the cars' engine-control computers checked the speed, steering wheel position, air pressure and other factors to determine when dynamometer tests were under way. It then turned on pollution controls that reduced the output of nitrogen oxides that contribute to smog and other pollution, the EPA has said.

VW started the scheme with the 2009 model year, and may not have been caught without testing performed at West Virginia University on behalf of the International Council on Clean Transportation, a nonprofit group that advises governments on regulations. EPA and California regulators confronted VW with those findings to VW in May 2014. The automaker eventually did a recall late last year, without much improvement, the EPA says.

Only when the EPA and the California Air Resources Board refused to approve VW's 2016 diesel models for sale did the company admit earlier this month what it had done.

The EPA said the cars are safe to drive but VW will have to pay to recall and fix them. VW also faces billions in fines.

Grundler says the EPA had deferred to European regulators on diesel emissions because diesels make up half the cars in Europe. The European Union became aware in 2010 that lab testing was not as accurate as on-road tests might be. In the case of carbon dioxide emissions tests — not nitrogen oxide — the discrepancy was as much as 20 percent.

The EU will introduce new tests from next year, with on-road testing complementing the laboratory work that is currently being done. Lab tests will also be refined to try to reduce the margin of error.

It's not the first time the EPA has had to change testing to make sure automakers are playing by the rules. Earlier this year the agency updated gas mileage tests after some automakers were caught with inflated window sticker estimates.

Grundler disputes the notion that EPA would never have caught VW without the outside help. European regulators were looking into VW's on-road diesel emissions as far back as

2012, and since diesels make up half the cars there, the EPA decided to let Europe take the lead, he says.

"I don't think it's fair to say that this would never have been uncovered," he says. "Do I wish we had uncovered it sooner? Absolutely."

Dear Chris, dear Karl, dear Bart,
attached you find a app for Android tablets which allows to drive on roads different drive cycles. It was impossible to implement the app for ipad due to limitations for the bluetooth connections. It can be used to detect defeat devices. In the ladt 5 days I gave numerous interviews in television, radio and newspaper about VW but also other manufactures. You need the cycles CSV file. As an example I add the NEFZ CSV file. If you have any questions don't hesitate to contact me.
Have a nice weekend.

Axel.

ps. I hold the license for the app. Don't distribute without notice to me..

Subject: EPA Request for Certification - Audi A3 e-tron

Hi Jim,

I have submitted the Initial Application and Certification Request for the A3 e-tron and e-tron ultra PHEV models, Test Group GVGAV01.4V3B. This Certification request is based on manufacturer test data using Tier 3 E10 fuel already waived from confirmatory testing. As you are aware the fuel economy for the worst case EDV (configuration 0) using E0 fuel is currently being confirmed at your lab. Please let me know if there are any questions.

I will be updating the CSI in the application with battery specific energy values and comments regarding Litmus test status next week. The existing calculated litmus thresholds in the CSI are erroneous due to Verify not being able to calculate the values with E10 fuel.

Regards,

Chris (and Byron)--

Heads up for now, pls don't share any of this until you get an official heads up from Janet or OCIR.

Sounds like for House E&C hearing there's a decent chance they will ask you (Chris) to testify alongside OCIR.

Again, not confirmed and we have no date yet.

There's also likely to be an incoming document request from their oversight committee for all VW-related materials.

Ben

The agency is going to "look at all of the other models aggressively and do the testing we need to make sure there aren't any hidden software devices or other ways they could defeat the emission system," McCarthy said.

The revelations about VW led to unwanted scrutiny for the EPA. Its testing procedures have been criticized for being predictable and outdated, making it relatively easy for VW to cheat.

EPA did not initially uncover the problem; researchers at West Virginia University did, using on-road testing that EPA did not.

Sen. Bill Nelson, D-Fla., said he was frustrated that regulatory agencies such as the EPA are failing to protect the public. "Seven years is way too long a time that the EPA has been asleep at the switch," he said.

The VW case has similarities to those involving General Motors ' defective ignition switches and Takata Corp.'s exploding air bag inflators, where it also took years before those problems were disclosed to consumers, Nelson said.

"When there is this kind of deception, we've got to get these agencies to be able to cut through it and catch it," he said.

Chris Grundler, head of the EPA's office of transportation and air quality, defended the agency's testing procedures, noting that passenger vehicles with diesel engines account for far less than 1 percent of overall vehicle emissions of nitrogen oxides and other pollutants.

"It's not a question of equipment or technology or capability. It's a question of where we deploy those resources," Grundler told reporters Friday.

The EPA has conducted on-road testing on heavy duty trucks, rather than passenger cars, "because that's where the emissions are," he said. The additional testing announced Friday is part of a "continuous evolution of our oversight" of new and used cars and trucks, Grundler said.

VW has admitted to installing so-called defeat devices on Volkswagen and Audi cars with four-cylinder diesel engines. The devices switch on pollution controls when the cars are being tested, but turn off the controls when the software determines that the cars are back on real roads. The EPA says about 500,000 U.S. cars including the Jetta, Golf, Beetle, Passat and Audi A3 have the cheating software, and VW says a total of 11 million cars have it worldwide.

VW was able to fool the EPA because the agency only tested the cars on treadmill-like devices called dynamometers and didn't use portable test equipment on real roads. The software in the cars' engine-control computers checked the speed, steering wheel position, air pressure and other factors to determine when dynamometer tests were under way. It then turned on pollution controls that reduced the output of nitrogen oxides that contribute to smog and other pollution, the EPA has said.

VW started the scheme with the 2009 model year, and may not have been caught without testing performed at West Virginia University on behalf of the International Council on Clean Transportation, a nonprofit group that advises governments on regulations. EPA and California regulators confronted VW with those findings to VW in May 2014. The automaker eventually did a recall late last year, without much improvement, the EPA says.

Only when the EPA and the California Air Resources Board refused to approve VW's 2016 diesel models for sale did the company admit earlier this month what it had done.

The EPA said the cars are safe to drive but VW will have to pay to recall and fix them. VW also faces billions in fines.

Grundler says the EPA had deferred to European regulators on diesel emissions because diesels make up half the cars in Europe. The European Union became aware in 2010 that lab testing was not as accurate as on-road tests might be. In the case of carbon dioxide emissions tests — not nitrogen oxide — the discrepancy was as much as 20 percent.

The EU will introduce new tests from next year, with on-road testing complementing the

laboratory work that is currently being done. Lab tests will also be refined to try to reduce the margin of error.

It's not the first time the EPA has had to change testing to make sure automakers are playing by the rules. Earlier this year the agency updated gas mileage tests after some automakers were caught with inflated window sticker estimates.

Grundler disputes the notion that EPA would never have caught VW without the outside help. European regulators were looking into VW's on-road diesel emissions as far back as 2012, and since diesels make up half the cars there, the EPA decided to let Europe take the lead, he says.

"I don't think it's fair to say that this would never have been uncovered," he says. "Do I wish we had uncovered it sooner? Absolutely."

EPA to Change Diesel Tests to Thwart VW-Like Cheating

•□□□□□□□ By matthew daly and tom krisher, associated press

WASHINGTON — Sep 25, 2015, 1:50 PM ET

The Environmental Protection Agency said Friday that it will launch sweeping changes to the way it tests for diesel emissions after getting duped by clandestine software in Volkswagen cars for seven years.

In a letter to car manufacturers, the EPA said it will add on-road testing to its regimen, "using driving cycles and conditions that may reasonably be expected to be encountered in normal operation and use, for the purposes of investigating a potential defeat device" similar to the one used by Volkswagen.

The testing would be in addition to the standard emissions test cycles already in place, the EPA said.

VW's sophisticated software allowed its cars to pass tests in the lab and then spew pollution into the atmosphere while on the highway. The changes announced Friday are designed to detect software and other methods automakers might use to rig a test.

"We're actually making sure that this is a one-off," EPA Administrator Gina McCarthy said Friday.

The agency is going to "look at all of the other models aggressively and do the testing we need to make sure there aren't any hidden software devices or other ways they could defeat the emission system," McCarthy said.

The revelations about VW led to unwanted scrutiny for the EPA. Its testing procedures have been criticized for being predictable and outdated, making it relatively easy for VW to cheat.

EPA did not initially uncover the problem; researchers at West Virginia University did, using on-road testing that EPA did not.

Sen. Bill Nelson, D-Fla., said he was frustrated that regulatory agencies such as the EPA are failing to protect the public. "Seven years is way too long a time that the EPA has been asleep at the switch," he said.

The VW case has similarities to those involving General Motors ' defective ignition switches and Takata Corp.'s exploding air bag inflators, where it also took years before those problems were disclosed to consumers, Nelson said.

"When there is this kind of deception, we've got to get these agencies to be able to cut through it and catch it," he said.

Chris Grundler, head of the EPA's office of transportation and air quality, defended the agency's testing procedures, noting that passenger vehicles with diesel engines account for far less than 1 percent of overall vehicle emissions of nitrogen oxides and other pollutants.

"It's not a question of equipment or technology or capability. It's a question of where we deploy those resources," Grundler told reporters Friday.

The EPA has conducted on-road testing on heavy duty trucks, rather than passenger cars, "because that's where the emissions are," he said. The additional testing announced Friday is part of a "continuous evolution of our oversight" of new and used cars and trucks, Grundler said.

VW has admitted to installing so-called defeat devices on Volkswagen and Audi cars with four-cylinder diesel engines. The devices switch on pollution controls when the cars are being tested, but turn off the controls when the software determines that the cars are back on real roads. The EPA says about 500,000 U.S. cars including the Jetta, Golf, Beetle, Passat and Audi A3 have the cheating software, and VW says a total of 11 million cars have it worldwide.

VW was able to fool the EPA because the agency only tested the cars on treadmill-like devices called dynamometers and didn't use portable test equipment on real roads. The software in the cars' engine-control computers checked the speed, steering wheel position, air pressure and other factors to determine when dynamometer tests were under way. It then turned on pollution controls that reduced the output of nitrogen oxides that contribute to smog and other pollution, the EPA has said.

VW started the scheme with the 2009 model year, and may not have been caught without testing performed at West Virginia University on behalf of the International Council on Clean Transportation, a nonprofit group that advises governments on

regulations. EPA and California regulators confronted VW with those findings to VW in May 2014. The automaker eventually did a recall late last year, without much improvement, the EPA says.

Only when the EPA and the California Air Resources Board refused to approve VW's 2016 diesel models for sale did the company admit earlier this month what it had done.

The EPA said the cars are safe to drive but VW will have to pay to recall and fix them. VW also faces billions in fines.

Grundler says the EPA had deferred to European regulators on diesel emissions because diesels make up half the cars in Europe. The European Union became aware in 2010 that lab testing was not as accurate as on-road tests might be. In the case of carbon dioxide emissions tests — not nitrogen oxide — the discrepancy was as much as 20 percent.

The EU will introduce new tests from next year, with on-road testing complementing the laboratory work that is currently being done. Lab tests will also be refined to try to reduce the margin of error.

It's not the first time the EPA has had to change testing to make sure automakers are playing by the rules. Earlier this year the agency updated gas mileage tests after some automakers were caught with inflated window sticker estimates.

Grundler disputes the notion that EPA would never have caught VW without the outside help. European regulators were looking into VW's on-road diesel emissions as far back as 2012, and since diesels make up half the cars there, the EPA decided to let Europe take the lead, he says.

"I don't think it's fair to say that this would never have been uncovered," he says. "Do I wish we had uncovered it sooner? Absolutely."

Subject: Correction in your story today

Hi Matt,

In your recent story today, there is a paragraph that does not reflect what Chris Grundler said accurately. You write:

Grundler says the EPA had deferred to European regulators on diesel emissions because diesels make up half the cars in Europe. The European Union became aware in 2010 that lab testing was not as accurate as on-road tests might be. In the case of carbon dioxide emissions tests — not nitrogen oxide — the discrepancy was as much as 20 percent.

In fact, Chris did not say that we deferred to EU. He said diesels were a bigger deal in Europe, and that Europe has different cycles and standards. He also didn't say that road testing is more accurate than lab. That is part of the European debate.

Can you please update your story accordingly? If you'd like to speak with Chris about this, please let me know.

New VW chief pledges 'maximum transparency' in wake of scandal

Sean Reilly, E&E reporter

Published: Friday, September 25, 2015

The new chief executive of Volkswagen AG today pledged "maximum transparency" in confronting the job of restoring trust as the German automaker struggles with the widening fallout from an emissions-cheating scam.

"Under my leadership, Volkswagen will do everything it can to develop and implement the most stringent compliance and governance standards in our industry," Matthias Müller said in a **news release** following his appointment by VW's board. "If we manage to achieve that, then the Volkswagen Group with its innovative strength, its strong brands and above all its competent and highly motivated team has the opportunity to emerge from this crisis stronger than before."

Müller, currently the chairman of VW's Porsche subsidiary, replaces Martin Winterkorn, who resigned Wednesday, five days after U.S. EPA and California state regulators accused the company of rigging almost a half-million diesel-powered passenger cars with software designed to game emission tests.

As described by EPA in a violation notice, the software activates full pollution controls only when the vehicle is undergoing tests, but otherwise runs on a separate calibration that results in nitrogen oxide emissions ranging from 10 to 40 times the permitted limit. In a conference call with reporters this morning, acting EPA air administrator Janet McCabe had no figures on how much additional NOx pollution has gone into the atmosphere as a result.

The scheme was uncovered last year by West Virginia University researchers working for the International Council on Clean Transportation, an independent nonprofit organization that advises regulators. According to EPA, however, Volkswagen management admitted to installing the "defeat devices" only when regulators refused to approve the company's 2016 diesel engines.

That approval has still not been granted, Chris Grundler, director of EPA's Office of Transportation and Air Quality, said on this morning's call. At the federal level, Volkswagen potentially faces billions of dollars in fines; the California Air Resources Board is also planning "major enforcement action," Chairwoman Mary Nichols said yesterday (***ClimateWire***, Sept. 25).

The repercussions are rippling through the auto industry as EPA today told other car manufacturers that it will impose additional testing aimed at uncovering

similar manipulation.

In stepping down this week, Winterkorn had denied any wrongdoing but said the company needed a fresh start. Exactly who bears responsibility for outfitting millions of VW and Audi vehicles worldwide with the defeat devices remains unclear. In a separate release today, Volkswagen's board said it has recommended the suspension of some employees but offered no further details as to the number or where exactly they stand in the corporate pecking order.

In the release, board members said they have also authorized an investigation by lawyers in Germany and the United States to fully "clarify the manipulation of emissions data of diesel engines" and voiced confidence in Müller's ability to help the company recover.

"The test manipulations are a moral and political disaster for Volkswagen," said Berthold Huber, the board's deputy chairman. "The unlawful behavior of engineers and technicians involved in engine development shocked Volkswagen just as much as it shocked the public. We can only apologize and ask our customers, the public, the authorities and our investors to give us a chance to make amends."

Obama: Chinese commitments put weight behind Paris talks

By Kevin Rogers

China's commitment to launching a cap-and-trade system by 2017, prioritizing renewable energy use, and investing $3.1 billion in climate finance for vulnerable countries will drive momentum toward a strong United Nations climate deal in December, President Barack Obama said Friday.

Speaking at a news conference following a bilateral meeting with Chinese President Xi

hoping, Obama said that the world's two largest polluters have now outlined their plans to slash emissions, and other nations will follow suit.

"When the world's two largest economies, energy consumers and carbon emitters come together like this, then there's no reason for other countries, whether developed or developing, to not do so as well," he said. "So this is another major step toward the global agreement the world needs to reach in two months' time."

In addition to the cap-and-trade system, which would apply to the nation's power generation, chemical production and much of its manufacturing, China will implement a "green dispatch" program that would prioritize the flow of renewable and low-carbon energy into the nation's power grid.

The UN talks in Paris will seek to strike a deal to keep global temperatures from rising 2 degrees Celsius from pre-industrial levels, the point at which scientists say the worst effects of climate change would become irreversible.

The U.S. and China, in a joint statement, called for that agreement to carry "legal force" to make sure commitments are upheld.

"We have agreed to expand bilateral practical cooperation, strengthen coordination in multilateral negotiation, and work together to push the Paris climate change conference to produce important progress," Xi said at the conference.

Both countries also committed to implementing heavy-duty truck emissions regulations by 2019, increased phase-out of hydrofluorocarbons, and improvements to efficiency standards for appliances and buildings.

Though Friday's announcement laid out some specifics on how China plans to make good on its commitment to cap its carbon emissions by 2030, critics said Obama was fleeced and warned China couldn't be trusted to uphold its end of the bargain.

"Once again, President Obama has allowed the Chinese government to run circles around him," Thomas Pyle, president of the free-market Institute for Energy Research, said in a statement. "This cap-and-trade commitment allows China to increase emissions for years into the future, while President Obama commits the U.S. to sharp reductions that will harm American families today."

Others, however, took China's announcement as an indication that the Paris talks would yield a strong deal to curb emissions.

"In setting a start date for its national emissions trading system, China sends a powerful signal that market-based strategies will play a critical role in the transition to a low-carbon future," Bob Perciasepe, president of the Center for Climate and Energy Solutions, said in a statement.

"Many issues remain and the United States and China cannot achieve a global accord alone," he said. "But the growing alignment of the world's two largest economies and emitters bodes well for a successful outcome in Paris."

Analysis: The pope, the speaker and the divided Republican party

By Brad Kalbfeld

For all of the focus Thursday on his remarks on the environment and poverty, the key theme in Pope Francis' speech to Congress was a call for unified action, for "solidarity" in solving problems.

"We must especially guard against the simplistic reductionism which sees only good or evil," Francis said. "The contemporary world, with its open wounds which affect so many of our brothers and sisters, demands that we confront every form of polarization which would divide it into these two camps."

He brought up the subject in the context of the fight against violent extremism, but in the next paragraph made clear it also applies to efforts to promote "the well-being of individuals and of peoples."

Francis added, "We must move forward together, as one, in a renewed spirit of fraternity and solidarity, cooperating generously for the common good. The challenges facing us today call for a renewal of that spirit of cooperation, which has accomplished so much good throughout the history of the United States."

The Vatican does not operate in a vacuum, and the pope was surely aware that he was

addressing an American political class that is riven with ideological divisions. His call seemed meant to spur political reconciliation, a return to governing by finding the middle ground, as opposed to the brinkmanship that has characterized much of Washington's governance in recent years, and that seems to be on the horizon as the end of the federal budget year approaches.

It was the threat of the return of that brinkmanship that led Rep. John Boehner to make his surprise announcement Friday that he is quitting both the speakership and his House seat. The Ohio Republican said his motivation was to spare the House the damage from a fight over his leadership, as GOP lawmakers struggled to decide whether they should force a government shutdown over the funding of Planned Parenthood.

"It's become clear to me that this prolonged leadership turmoil would do irreparable harm to the institution," Boehner told reporters. He said he was sure he would have survived a leadership vote, "but I didn't want my members to go through this, I didn't want this institution to go through this."

That Francis' call to avoid polarization fell on at least some deaf congressional ears was clear in the reaction of at least one Republican lawmaker, Rep. Tom Massie of Kentucky, who reacted to Boehner's announcement by saying the speaker had "subverted our Republic."

And the immediate, almost visceral reaction to the pope's references to climate change Thursday reflected the same polarization at work, with opponents to recent climate regulations ignoring his references to global warming and using his arguments about the poor as justification for rolling back Obama administration pollution rules.

The fight over federal funding and the presidential campaign will provide plenty of opportunities for heeding—or ignoring—the pontiff's plea for cooperation.

Boehner's decision suggests how he thinks it will turn out. Francis' speech was a big, emotional achievement for him. It is ironic that, just a day after that speech, with its plea to end the very polarization that dogged his speakership, Boehner decided the problem was so severe that protecting his beloved House would require his departure.

Brad Kalbfeld traveled extensively with Pope John Paul II, covering his visits to more than a dozen countries.

Pope decries environmental damage, then visits ground zero

By Nicole Winfield and Jennifer Peltz

NEW YORK (AP) — In a day of both forceful words and eloquent silence, Pope Francis stood before the United Nations on Friday to decry the destruction of the environment through the "selfish and boundless thirst" for profit, then paid tribute to the victims of 9/11 with a prayer service at ground zero.

Francis' agenda for his first full day in New York was packed with contrasts befitting a head of state dubbed the "slum pope" for his devotion to the poor.

With a schedule expected to take him from the halls of global power to a classroom in East Harlem, a parade through Central Park and a Mass in Madison Square Garden, Francis swept into a city on a rock-star wave of popularity and was met with cheering, sometimes shrieking, crowds.

Amid extraordinarily tight security, the pope started Day 4 of his first-ever trip to the U.S. at the United Nations, where he declared that the environment itself has rights and that mankind has no authority to abuse them.

UN development summit sees more climate pledges

By The Associated Press

UNITED NATIONS (AP) — India's prime minister has confirmed plans for a fivefold boost in renewable energy but is adding two years to the time frame.

Narendra Modi previously pledged that India would make the increase by the next time he faces election in 2020, but on Friday he acknowledged that it would take longer than planned. He now says it will take seven years.

Modi addressed the U.N. General Assembly shortly after world leaders adopted a sweeping new agenda for global development for the next 15 years. India's climate commitment to the U.N. has been widely anticipated in advance of a global summit in Paris in December. Its government has said it will make its climate commitment by Oct. 1.

But now that world leaders have launched an ambitious set of global goals to eliminate hunger and poverty over the next 15 years, how are they going to make it happen?

Lawsuit challenges limits on industry that aim to save sage grouse

By Matthew Brown

BILLINGS, Mont. (AP) — Two Nevada counties and some mining companies want a court to block new restrictions on mining, energy development and grazing that are meant to protect a declining bird species across millions of acres of the American West.

The case appears to be the first challenge to the Interior Department's declaration this week that it can protect the greater sage grouse without hobbling the region's economy.

The lawsuit filed in U.S. District Court targets newly signed federal land-use plans covering portions of Nevada, Montana, Idaho, California, Utah and Oregon. It has implications across the bird's 11-state range.

To help the grouse, Interior officials want to withdraw 10 million acres from future mining claims, prohibit oil and gas drilling near breeding grounds and impose new reviews on grazing permits.

More

VW taps head of Porsche to be new CEO amid emissions scandal

By Geir Moulson and Pan Pylas

BERLIN (AP) — Volkswagen's board appointed the head of its Porsche unit as CEO on Friday, handing longtime company insider Matthias Mueller the task of trying to lead the world's top-selling automaker past a growing emissions scandal.

The company also said it was suspending some employees and would reorganize its North America operations after admitting it used a piece of engine software to cheat on diesel car emissions tests in the U.S.

Winfried Vahland, until now chairman of the board of directors at Skoda, will lead the North American reshuffle.

The company says Michael Horn will remain as president and CEO of Volkswagen Group of America, but its U.S, Canada and Mexico markets will be "combined and significantly strengthened" to form a new "North America region."

The decisions come after the previous CEO, Martin Winterkorn, quit the job this week over the scandal, which has shredded the company's reputation.

The company could be heavily fined and hit with class-action lawsuits costing billions. It will also have to fix programming it has said is in some 11 million cars worldwide, far more than the 482,000 identified last week by U.S. authorities.

Drinking water systems imperiled by failing infrastructure

By Ryan J. Foley

DES MOINES, Iowa (AP) — Deep inside a 70-year-old water-treatment plant, drinking water for Iowa's capital city is cleansed of harmful nitrates that come from the state's famously rich farmland.

Without Des Moines Water Works, the central Iowa region of 500,000 people that it serves wouldn't have a thriving economy. But after decades of ceaseless service, the utility is confronting an array of problems: Water mains are cracking open hundreds of times every year. Rivers that provide its source water are increasingly polluted. And the city doesn't know how it will afford a $150 million treatment plant at a time when revenues are down and maintenance costs are up.

"We're reaching the end of the life cycle of some of the most critical assets we've got," said Bill Stowe, CEO and general manager of the utility, where the downtown plant was built long before nitrates that can harm infants became a pressing concern.

Around the country, scores of decaying drinking water systems built around the time of World War II and earlier are in need of replacement. The costs to rebuild will be staggering. The costs of inaction are already piling up. The challenge is deepened by drought conditions in some regions and government mandates to remove more contaminants.

Cities bear rising cost of keeping water safe to drink

By John Seewer

TOLEDO, Ohio (AP) — Standing at the edge of the Great Lakes, the world's largest surface source of fresh water, this city of 280,000 seems immune from the water-supply problems

that bedevil other parts of the country. But even here, the promise of an endless tap can be a mirage.

Algae blooms in Lake Erie, fed by agriculture runoff and overflowing sewers, have become so toxic that they shut down Toledo's water system in 2014 for two days. The city is considering spending millions of dollars to avoid a repeat.

Similar concerns about water quality are playing out elsewhere. Farm fertilizers, discarded pharmaceuticals, industrial chemicals and even saltwater from rising oceans are seeping into many of the aquifers, reservoirs and rivers that supply Americans with drinking water.

Combating these growing threats means cities and towns must tap new water sources, upgrade aging treatment plants and install miles of pipeline, at tremendous cost.

More

Skiing, climbing, global warming: French Alps show dilemma

By Lori Hinnant

PARIS (AP) — The Alps are the birthplace of downhill skiing and a crucible for mountain climbing — but now the French government is trying to help their winter tourist towns adapt to a warming world.

French Prime Minister Manuel Valls visited the Mer de Glace (the Sea of Ice) Friday on Mont Blanc, where the retreating glacier has been documented for more than a century, through water colors painted before the invention of the still camera, black-and-white photos depicting a then-modern steam locomotive chuffing alongside the ice and today's high-definition satellite photos.

"The Mer de Glace reveals the extent of climate change, and, to the naked eye," said Valls. "The time has come to mobilize."

Researchers say the Sea of Ice is only the most accessible example of a problem the entire Alpine region is facing as warming mountainsides become more unstable and snowfall more inconsistent, threatening jobs and lives in a region heavily dependent on adventure tourism.

Protests in Nepal causing shortages of gasoline, medicine

By Post Basnet

KATHMANDU, Nepal (AP) — Nepal warned on Friday that shortages of gasoline and medicine would be severe soon as supply trucks from India stopped during protests at border crossings by hundreds of people angry about Nepal's new constitution.

Acting Nepalese Foreign Minister Khagraj Adhikari called Indian Ambassador Ranjit Rae and inquired about obstructions at the border, said Deepak Adhikari, a ministry spokesman.

The Indian foreign ministry in New Delhi denied there was any hurdle on its side and blamed protests inside Nepal for the disrupted movement of oil tankers and trucks loaded with medicine, sugar, salt, food and cooking gas cylinders.

The small Himalayan nation depends heavily on supplies from its giant neighbor.

Monthly ARB-OTAQ Senior Leadership Coordination Call

Monday, September 28, 2015(11am-12pm Pacific, 2-3pm Eastern)

Call-in number: ph. Non-Responsive Participant Passcode: Non-Responsive

Agenda Items

1. VW Coordination [Byron & Annette]

- 2016 Executive Order / Certificate of Conformity
- LD Diesel Screening (CARB/EPA/EC)
- New Conformity Screening Procedures
- Gen 3 Recall
- Gen 2 Recall

Non-Responsive

Non-Responsive

4. Other items?

Upcoming Actions/Events of Potential Interest:

-

- October 13: Heavy-duty Vehicle Technology Showcase at EPA's Ann Arbor Laboratory

-

- Light-duty Mid-term Evaluation Meetings w/ ARB/NHTSA/EPA

o September 30: Jaguar-LandRover (Ann Arbor)

o October 6: Volvo (Washington)

o October 7: Honda (Ohio)

o October 15: Nissan (Tennessee)

o October 26: Mercedes (Ann Arbor)

o Honeywell/Toyota/Tesla (California)

-

- October 30: U. of Michigan Transportation, Economics, Energy, & Environment Conference in Ann Arbor (Alberto speaking?)

- December 3: EPA Mobile Source Technical Review Sub-committee (MSTRS) Meeting, Long Beach, California

- December 10/11 UC Davis STEP Fall Research Meeting (Karl and Chris coming?)

FYI, what was said in the press call Friday before we took a few questions. Byron and Ex. 7 worked out the "next steps" text

Press Call: 9/25/2015

Release of Auto Manufacturer Expanded Testing Guidance Letter

Final Remarks as Prepared

Janet McCabe, Acting Assistant Administrator, Office of Air and Radiation, U.S. EPA

- Last Friday, EPA sent a Notice of Violation of the Clean Air Act to Volkswagen AG, Audi AG, and Volkswagen Group of America, Inc. alleging that four-cylinder Volkswagen and Audi diesel cars from model years 2009-2015 include software that circumvents EPA emissions standards.

- Put simply, these cars contain software that turns off emissions controls when driving normally, and turns them on when the car is undergoing an emission test.

- Known as a "defeat device," this design feature results in the cars emitting up to 40 times the amount of NOx emissions that are allowed to ensure public health is protected.

- EPA's notice of violation, along with an In-Use Compliance Letter that the California Air Resources Board issued, provide information and details relating to the VW violations.

VW FOIA, EPA 06/20/2017 2017-FFP_026771

- As we stated last week, these violations are very serious. Not only because the illegal defeat device results in excess emissions many times the allowable standard, but also because VW was concealing the facts from EPA, the State of California, and from consumers.

- Given the seriousness of this situation, we are having this call today in order to provide an update on our work and next steps.

- Today's update does not affect our current investigation of VW.

- That investigation continues, and the reasons for it are spelled out in our notice of Violation that we issued last week.

- Today's update is to inform you all about a letter to all auto manufacturers that we are sending today.

- This letter is intended to notify all automakers that we are stepping up our testing activities in response to VW's alleged violations.

- We take seriously our responsibility to oversee the implementation and enforcement of our clean air regulations. It is this oversight that ensures both the benefits of clean air emissions standards and that the industry is competing on a level playing field and that consumers are getting what they pay for.

VW FOIA, EPA 06/20/2017 2017-FFP_026772

- Our regulatory programs for cars and trucks are working. We know this because air quality monitors tell a clear and compelling story: U.S. air quality has dramatically improved as a result of implementing our program, even as vehicle miles and the economy have grown significantly.

- EPA and California's joint implementation of our motor vehicle programs have been very successful at delivering on our agencies' missions to protect human health and the environment.

- Both EPA and California have robust oversight programs that have adapted as technologies and circumstances have changed.

- But we also know, and the VW violations before us now have made it all the clearer, that we must continue to improve and adapt our oversight. And we will.

- I will now turn to Chris Grundler, EPA's Director of our Office of Transportation and Air Quality, who will provide some information about our current approach to vehicle emissions compliance, along with a few other relevant updates.

Chris Grundler, Office Director, Office of Transportation and Air Quality, U.S. EPA

- EPA's compliance program for cars and trucks is at the heart of ensuring that the Agency delivers on the promise of the Clean Air Act.

- EPA has a well-established process in place for certifying that new vehicles meet federal emission standards for air pollutants. This program, which includes new car testing and audits, ensures that cars are compliant with our clean air regulations.

- All new cars sold in the United States must have an EPA-issued "certificate of conformity." It is not legal to sell a new car in the U.S. without such a certificate.

- Neither CARB nor EPA allow manufacturers to self-certify. Volkswagen does not have a 2016 model year EPA Certificate of Conformity or a CARB Executive Order for its four cylinder diesel vehicles because CARB and EPA are not yet convinced that the data and evidence presented by Volkswagen demonstrate the vehicles will perform as required by the regulations.

- Experienced engineers and scientists at the two organizations review manufacturer applications for certification, request additional evidence, and perform confirmatory tests on a portion of the vehicles before reaching a decision to approve or deny an application.

- Manufacturers must attest to the accuracy and integrity of the data and other documentation they submit. They face severe penalties if they are found to have misled the agencies.

- The agencies have broad discretion to require manufacturers to conduct additional testing under section 206 of the Clean Air Act, or to conduct tests on their own to verify vehicle performance with the emission regulations.

- If EPA believes that vehicles are not compliant, we do not certify them, and

they cannot be sold. Ultimately it is this action that held VW to account.

- Beyond reviewing design and emissions information, as part of our ongoing compliance oversight, EPA tests vehicles we borrow from private owners to ensure that they match the certified design and align with data submissions. In addition, we perform audits of vehicles selected at random from manufacturer production lines to help confirm fuel economy and GHG performance. Finally, we perform in-use investigations using Portable Emissions Measurement Systems (PEMS) to evaluate vehicle performance on the road.

- EPA also is responsible for much of the original development of portable emissions monitoring technology – the kind of equipment that West Virginia University used to test the VW and BMW vehicles in 2014 that led to the discovery of high emissions from VW diesels.

- We use this same equipment ourselves to conduct real world emissions testing every year. In recent years, though, EPA has focused its portable emissions testing efforts primarily on the heavy-duty diesel truck market whose annual NOx emissions dwarf the inventory from light-duty diesels (LD diesel passenger cars make up less than 0.2% of on-highway diesel NOx emissions)

- Why? Because that's where most diesel emissions are. It's also an area where we have seen industry employ defeat devices in the past. Every year we make decisions about where to prioritize our limited testing resources, and we prioritize based on, among other things, where the emissions are greatest.

- WVU and ICCT chose light duty diesel cars like VW's for their testing precisely because they believed these vehicles would be clean. These vehicles make up less than 1 percent of the US light-duty fleet.

- As soon as the testing showed they were not clean, CARB took the lead in

coordination with EPA took on the issue, which led us to where we are today.

- EPA and California's oversight programs are active and robust, as our recent actions to address issues with Hyundai, Kia and Ford vehicles demonstrate.

- But technologies evolve and circumstances change, and we are continuously looking at ways to improve our compliance and oversight programs. In the past, we have added new procedures, like high-speed driving and air-conditioning use, to ensure our lab tests better replicate real-world driving conditions

- And we will continue to adapt. As EPA Administrator McCarthy said a few days ago, we are "upping our game."

- Today we are putting vehicle manufacturers on notice that our confirmatory testing is now going to include additional evaluations designed to look for potential defeat devices.

- We aren't going to tell them what these tests are, they don't need to know. They only need to know we will be keeping their vehicles longer and driving them more.

- We will be continuing to review with our partners at the California Air Resources Board what we can learn from this VW case and will adapt and improve as we always have to ensure we deliver on the Agency's mission.

NEXT STEPS

- Now let me provide you with a brief update of other steps related to the VW matter.

- We are actively recruiting light duty diesel vehicles to test for defeat devices or other compliance issues.

- This testing is starting now, in concert with testing by the California Air Resources Board and Environment Canada.

- Many of these same vehicles are sold in Canada as well as the US. We are very pleased that Environment Canada will be an active partner in this effort allowing us to more quickly test all light-duty diesel makes and models for potential defeat devices.

- Turning to next steps to address the affected vehicles

- First, we should be clear that since the discovery of the defeat device we have not issued a recall order to Volkswagen or Audi.

- The California Air Resources Board (CARB) and EPA are working intently with Volkswagen to evaluate potential recall solutions for the affected vehicles.

- The September 18, 2015 Notice of Violation and CARB In-Use Compliance letter cover three generations of Volkswagen four cylinder diesel vehicles. We expect solutions will be found relatively quickly for the most recent generation (all model year 2015 vehicles) and soon thereafter for the 2012-2014 VW Passat diesels

- We expect the first generation of vehicles (all pre-2015 vehicles except for the Passat) will require additional engineering development that will take longer.

- The agencies will evaluate the technical solutions that Volkswagen develops to ensure their emissions performance is improved in real world driving and will carefully scrutinize for impacts on consumers.

- As the engineering work progresses, the Agencies and Volkswagen will communicate timelines for the recalls and the nature of the solutions.

- If you are an owner of an affected Volkswagen or Audi diesel vehicle you should know that when a recall is ordered the notice will come from Volkswagen. It will provide you with information about the recall and with instructions about how to get your car repaired at no cost to you.

VW FOIA, EPA 06/20/2017 2017-FFP_026777

- In the meantime, these cars are safe and legal to drive. Owners do not need to take any action at this time.

- We will continue to update you as our investigation continues.

VW FOIA, EPA 06/20/2017 2017-FFP_026778

Thanks for the kind words, Chris - means a lot coming from someone like yourself. I hope things are well on your end, and realize you probably can't say a whole lot about this anymore given the circumstances, but let's aim to keep the conversation going between us if we can, even if it's just off-the-record. You've got a valuable perspective on how this is going to play out in the coming weeks (and heck, months).

Chris,

We're putting together what I'll describe as the big push on a definitive timeline of events - and I was hoping you might have time to talk for a bit later today? I know we spoke briefly on Friday, but there are a few specific details of the final days leading up to VW's admission to EPA of what it had done that I need to fill in. Figured you'd be the person to do that...if you're willing.

Thanks,

Sent: Friday, September 25, 2015 4:11 PM
To: Ortiz, Julia
Subject: Question from AP on emissions testing

Julia,

Matt Daly suggested I reach out to you. We are working on a story about the emissions testing process as related to the VW issue. We have some specific questions about what the EPA does. I will list them below and wondered if you could answer them or

point me in the right direction?

•□□□□□□□ We understand that EPA "certifies" that a car model meets emission standards before it can be sold. What does "certification" mean? What exactly happens in terms of testing before this certification is given, who does the testing, what kind of testing and how much? (could you point me to a video or description of how the tests are conducted) We know that you announced today more robust testing but we want to know what was the exact procedure before the announcement today, and specifically how was it applied to VW?

•□□□□□□□ Once certification is given, does EPA do any further testing or spot checks of actual vehicles rolling off assembly lines or arriving at ports of entry from overseas?

•□□□□□□□ Are manufacturers required to do any further tests after certification of the model? Are car dealers? Are importers at ports? If not, how does a buyer of a car know that the car meets the emission standard? I assume the answer to the last question is that it says on the sticker but please verify if that is the case.

•□□□□□□□ Could you explain whether federal law requires states to do emissions testing of vehicles on the road and whether this covers just gas vehicles or diesel as well? If there is no requirement, why?

Thanks in advance for your help.

Cheers.

Greg

Sent: Sun 9/27/2015 6:01:37 PM
Subject: Morning Consult Energy, Presented by the American Coalition for Clean Coal Electricity: Week in Review & What's Ahead

By Colleen Leahy and Deirdra O'Regan

Week in Review

Pope Francis visits Washington

Pope Francis made a historic visit to Washington, where he first spoke at the White House, praising President Obama's Clean Power Plan. He later addressed a joint meeting of Congress and urged the United States to take "responsible" action on climate change.

Clinton and Bush reveal bits of their energy and environment plans

Democratic presidential frontrunner Hillary Clinton stated her position on the Keystone XL pipeline after years of silence on the issue, saying she opposes it. Her declaration pleased environmentalists but prompted Republicans to say her timing was just a political calculation meant to coincide with the pope's visit. Republican presidential candidate Jeb Bush unveiled his plans for government regulations, saying he would target much of President Obama's climate agenda, adding that he would repeal the Clean Power Plan, the Waters of the United States rule and the coal ash disposal rule if elected president.

Senate Democrats introduce voter-bait energy plan

Leading Senate Democrats Harry Reid (Nev.) and Chuck Schumer (N.Y.) released an aggressive energy plan, which includes a goal of reducing U.S. carbon emissions at least 2 percent annually through 2025. While the measure is unlikely to advance in the GOP-controlled Senate, Schumer said he foresees clean energy and job creation being top campaign issues in 2016.

EPA says Volkswagen purposefully evaded air laws

The Environmental Protection Agency accused Volkswagen of purposefully evading air pollution laws for seven years, with some tests showing that the company's vehicles emitted up to 40 times more pollution than allowed under federal law. The scandal led to the resignation of the company's chief executive officer, Martin Winterkorn.

What's Ahead

Lawmakers on Capitol Hill are working toward preventing a government shutdown come Oct. 1, the first day of the new fiscal year. The Senate is expected to vote early this week on a measure that would keep the government funded through Dec. 11 without defunding Planned Parenthood, an approach that faces an uncertain reception in the House.

EPA will make changes to its diesel emissions testing protocol in light of the Volkswagen scandal, adding on-road testing to the current lab tests. On Capitol Hill, the House Energy and Commerce Committee's Subcommittee on Oversight and Investigations will hold a hearing in the coming weeks on the Volkswagen emissions falsification scandal.

EPA is expected to release its final revision to the National Ambient Air Quality Standards (NAAQS) in the next two weeks, with a court-ordered deadline of Oct. 1. EPA has to adjust the NAAQS, which dictate the level of ozone permitted in the atmosphere, every five years.

The Land and Water Conservation Fund is set to expire on Wednesday. Although Senate Republicans and Democrats have reached a compromise on funding the program, the House hasn't taken up a reauthorization measure yet and may not do so before Sept. 30, the end of the fiscal year.

House Speaker John Boehner (R-Ohio) will resign from Congress on Oct. 30, prompting an upheaval in the House GOP leadership.

Subject: Morning Consult Energy, Presented by the American Coalition for Clean Coal Electricity: Week in Review & What's Ahead

By Colleen Leahy and Deirdra O'Regan

Week in Review

Pope Francis visits Washington

Pope Francis made a historic visit to Washington, where he first spoke at the White House, praising President Obama's Clean Power Plan. He later addressed a joint meeting of Congress and urged the United States to take "responsible" action on climate change.

Clinton and Bush reveal bits of their energy and environment plans

Democratic presidential frontrunner Hillary Clinton stated her position on the Keystone XL pipeline after years of silence on the issue, saying she opposes it. Her declaration pleased environmentalists but prompted Republicans to say her timing was just a political calculation meant to coincide with the pope's visit. Republican presidential candidate Jeb Bush unveiled his plans for government regulations, saying he would target much of President Obama's climate agenda, adding that he would repeal the Clean Power Plan, the Waters of the United States rule and the coal ash disposal rule if elected president.

Senate Democrats introduce voter-bait energy plan

Leading Senate Democrats Harry Reid (Nev.) and Chuck Schumer (N.Y.) released an aggressive energy plan, which includes a goal of reducing U.S. carbon emissions at least 2 percent annually through 2025. While the measure is unlikely to advance in the GOP-controlled Senate, Schumer said he foresees clean energy and job creation being top campaign issues in 2016.

EPA says Volkswagen purposefully evaded air laws

The Environmental Protection Agency accused Volkswagen of purposefully evading air pollution laws for seven years, with some tests showing that the company's vehicles emitted up to 40 times more pollution than allowed under federal law. The scandal led to the resignation of the company's chief executive officer, Martin Winterkorn.

What's Ahead

Lawmakers on Capitol Hill are working toward preventing a government shutdown come Oct. 1, the first day of the new fiscal year. The Senate is expected to vote early this week on a measure that would keep the government funded through Dec. 11 without defunding Planned Parenthood, an approach that faces an uncertain reception in the House.

EPA will make changes to its diesel emissions testing protocol in light of the Volkswagen scandal, adding on-road testing to the current lab tests. On Capitol Hill, the House Energy and Commerce Committee's Subcommittee on Oversight and Investigations will hold a hearing in the coming weeks on the Volkswagen emissions falsification scandal.

EPA is expected to release its final revision to the National Ambient Air Quality Standards (NAAQS) in the next two weeks, with a court-ordered deadline of Oct. 1. EPA has to adjust the NAAQS, which dictate the level of ozone permitted in the atmosphere, every five years.

The Land and Water Conservation Fund is set to expire on Wednesday. Although Senate Republicans and Democrats have reached a compromise on funding the program, the House hasn't taken up a reauthorization measure yet and may not do so before Sept. 30, the end of the fiscal year.

House Speaker John Boehner (R-Ohio) will resign from Congress on Oct. 30, prompting an upheaval in the House GOP leadership.

Let me catch everyone up on the background here, and then I will make a suggestion.

Geoff Cooper from OGC has been managing the DMCA question for the Agency with considerable input from OECA and OTAQ/CD on the issue. Geoff's been our dispassionate legal advisor and CD & OECA have been strong voices of concern.

Dear Julia,

I'm a reporter at The New York Times and I'm writing a story with my colleague, David Gelles, on the challenges regulators face in regulating cars that increasingly rely on software and advanced electronics.

I know that the EPA has opposed opening up the codes that auto manufacturers use in their vehicles, because people might try to reprogram their cars to beat emissions rules.

In light of the recent Volkswagen revelations, also from the EPA, I was curious to know whether there was any rethink in the works at the agency on its stance. Some experts have said that more transparency, not less, could hold automakers better accountable, whether it be over emissions or safety defects.

Who would be the best person to speak with at the agency? Please do let me know. We are working on a somewhat tight deadline of noon on Thursday.

Thanks
Hiroko

Subject: REQUEST EPA COMPLIANT CAR

RE: TRADE-IN of 2012 VW Jetta Sportwagen Diesel with compromised emissions.

Hello to All Concerned:

First of All, I love my car. I'm sorry that VW has compromised my trust. I have owned many VW's over my life and I want to own one that does not spew as many toxins as my current car.

We purchased a "Clean Diesel" VW Jetta Sportwagen Diesel 2012 new.Current mileage 25,690 approximately. A 2015 scandal determined that car does not meet EPA standards for Nox emissions.

Request trade-in for VW Golf SportWagen with AdBlue System to resolve this situation. I am a conscientious person who does not want to do more harm to the environment by continuing to drive my car. This is a simple solution to keep more emissions out of our air.

Thank you for your time and consideration.

HOW EPA FACILITATES AUTO EMISSION FRAUD

Agency Doubles Down on Outmoded Dynamometers While Eschewing In-Use Data

Washington, DC — In the wake of Volkswagen's emissions cheating scandal, the U.S. Environmental Protection Agency still clings to the questionable testing methods that enabled the fraud, according to Public Employees for Environmental Responsibility (PEER). At the same time, the agency is not using actual on-the-road "in-use" data it collects from diesel vehicles to monitor emissions or efficiency.

EPA emission and fuel economy testing is conducted by putting the vehicle on a dynamometer – essentially a big treadmill. VW engineers used software to control how the engines performed on the dynamometer while actual in-use emissions were up to 40 times higher. The episode vividly illustrates that dynamometer test results can no longer be assumed to correlate with in-use emissions.

This was a lesson that EPA supposedly learned almost twenty years ago when it discovered that heavy duty diesel engine manufacturers were using the same type of cheating strategy VW employed. In response, EPA forced the heavy duty engine manufacturers to sign a consent decree in 1998 which, among other things, mandated "in-use testing" of vehicles to show compliance. That decree also clearly stipulated that data from that "in-use testing program" were to be made public. Yet –

•□□□□□□□ Despite the vow to make these data public, EPA has decided that the years' worth of in-use data it has collected will not be released because they contain "Confidential Business Information";

•□□□□□□□ EPA has invested another $50 million for a heavy duty chassis dynamometer and test cell that it will roll out at a "Showcase" on October 13th; and

•□□□□□□□ Individual EPA engineers and the agency itself license patents on the engine technologies that EPA is then supposed to regulate.

"All of the claimed public health and economic benefits of emissions and fuel economy standards are based completely upon an unproven assumption – that dynamometer test reflect actual in-use experience," stated PEER Executive Director Jeff Ruch who is pressing EPA through a Freedom of Information Act request to post the in-use heavy duty diesel data as promised in the consent decree. "Independent analysis of in-use data may reveal an even larger disconnect between lab tests and on-the-road performance."

Ironically, just as the VW episode underlines the fact that chassis dynamometer tests no longer can be trusted, EPA is preparing a new showcase test cell. In so doing, EPA managers brushed aside internal objections that further investment in a chassis dynamometer is unjustified, especially since no regulations require it.

"This scandal shows that dynamometer technology is a dinosaur yet EPA keeps

pouring money into it," added Ruch, voicing frustration that past complaints from PEER about conflicts of interest within EPA on automotive technology have not been pursued. "The fact that the VW cheating was revealed by outsiders indicates the clubby and closed manner in which this arm of EPA operates."

Perhaps indicating that an internal reappraisal has begun, on Friday September 25th, EPA issued a terse letter to manufacturers that it "may test or require testing on any vehicle at a designated location [under] conditions that may be reasonably expected to be encountered in normal driving operation…" However, this step is a far cry from requiring manufacturers to monitor in-use fleet performance and report that data to EPA. Moreover, EPA stipulates that any new testing is aimed not at increasing regulatory reliance on on-road performance but is instead limited to "the purposes of investigating a potential defeat device."

The episode vividly illustrates that dynamometer test results can no longer be assumed to correlate with in-use emissions.

This was a lesson that EPA supposedly learned almost twenty years ago when it discovered that heavy duty diesel engine manufacturers were using the same type of cheating strategy VW employed. In

response, EPA forced the heavy duty engine manufacturers to sign a consent decree in 1998 which, among other things, mandated "in-use testing" of vehicles to show compliance. That decree also clearly stipulated that data from that "in-use testing program" were to be made public. Yet –

•□□□□□□□ Despite the vow to make these data public, EPA has decided that the years' worth of in-use data it has collected will not be released because they contain "Confidential Business Information";

•□□□□□□□ EPA has invested another $50 million for a heavy duty chassis dynamometer and test cell that it will roll out at a "Showcase" on October 13th; and

•□□□□□□□ Individual EPA engineers and the agency itself license patents on the engine technologies that EPA is then supposed to regulate.

"All of the claimed public health and economic benefits of emissions and fuel economy standards are based completely upon an unproven assumption – that dynamometer test reflect actual in-use experience," stated PEER Executive Director Jeff Ruch who is pressing EPA through a Freedom of Information Act request to post the in-use heavy duty diesel data as promised in the consent decree. "Independent analysis of in-use data may reveal an even larger disconnect between lab tests and on-the-road performance."

Ironically, just as the VW episode underlines the fact that chassis dynamometer tests no longer can be trusted, EPA is preparing a new showcase test cell. In so doing, EPA managers brushed aside internal objections that further investment in a chassis dynamometer is unjustified, especially since no regulations require it.

"This scandal shows that dynamometer technology is a dinosaur yet

EPA keeps pouring money into it," added Ruch, voicing frustration that past complaints from PEER about conflicts of interest within EPA on automotive technology have not been pursued. "The fact that the VW cheating was revealed by outsiders indicates the clubby and closed manner in which this arm of EPA operates."

Perhaps indicating that an internal reappraisal has begun, on Friday September 25th, EPA issued a terse letter to manufacturers that it "may test or require testing on any vehicle at a designated location [under] conditions that may be reasonably expected to be encountered in normal driving operation…" However, this step is a far cry from requiring manufacturers to monitor in-use fleet performance and report that data to EPA. Moreover, EPA stipulates that any new testing is aimed not at increasing regulatory reliance on on-road performance but is instead limited to "the purposes of investigating a potential defeat device."

HOW EPA FACILITATES AUTO EMISSION FRAUD

Agency Doubles Down on Outmoded Dynamometers While Eschewing In-Use Data

Washington, DC — In the wake of Volkswagen's emissions cheating scandal, the U.S. Environmental Protection Agency still clings to the questionable testing methods that enabled the fraud, according to Public Employees for Environmental Responsibility (PEER). At the same time, the agency is not using actual on-the-road "in-use" data it collects from diesel vehicles to monitor emissions or efficiency.

EPA emission and fuel economy testing is conducted by putting the vehicle on a dynamometer – essentially a big treadmill. VW engineers used software to control how the engines performed on the dynamometer while actual in-use emissions were up to 40 times higher. The episode vividly illustrates that dynamometer test results can no longer be assumed to correlate with in-use emissions.

This was a lesson that EPA supposedly learned almost twenty years ago when it discovered that heavy duty diesel engine manufacturers were using the same type of cheating strategy VW employed. In response, EPA forced the heavy duty engine manufacturers to sign a

consent decree in 1998 which, among other things, mandated "in-use testing" of vehicles to show compliance. That decree also clearly stipulated that data from that "in-use testing program" were to be made public. Yet –

•□□□□□□□□ Despite the vow to make these data public, EPA has decided that the years' worth of in-use data it has collected will not be released because they contain "Confidential Business Information";

•□□□□□□□□ EPA has invested another $50 million for a heavy duty chassis dynamometer and test cell that it will roll out at a "Showcase" on October 13th; and

•□□□□□□□□ Individual EPA engineers and the agency itself license patents on the engine technologies that EPA is then supposed to regulate.

"All of the claimed public health and economic benefits of emissions and fuel economy standards are based completely upon an unproven assumption – that dynamometer test reflect actual in-use experience," stated PEER Executive Director Jeff Ruch who is pressing EPA through a Freedom of Information Act request to post the in-use heavy duty diesel data as promised in the consent decree. "Independent analysis of in-use data may reveal an even larger disconnect between lab tests and on-the-road performance."

Ironically, just as the VW episode underlines the fact that chassis dynamometer tests no longer can be trusted, EPA is preparing a new showcase test cell. In so doing, EPA managers brushed aside internal objections that further investment in a chassis dynamometer is unjustified, especially since no regulations require it.

"This scandal shows that dynamometer technology is a dinosaur yet EPA keeps pouring money into it," added Ruch, voicing frustration

that past complaints from PEER about conflicts of interest within EPA on automotive technology have not been pursued. “The fact that the VW cheating was revealed by outsiders indicates the clubby and closed manner in which this arm of EPA operates.”

Perhaps indicating that an internal reappraisal has begun, on Friday September 25th, EPA issued a terse letter to manufacturers that it “may test or require testing on any vehicle at a designated location [under] conditions that may be reasonably expected to be encountered in normal driving operation…” However, this step is a far cry from requiring manufacturers to monitor in-use fleet performance and report that data to EPA. Moreover, EPA stipulates that any new testing is aimed not at increasing regulatory reliance on on-road performance but is instead limited to “the purposes of investigating a potential defeat device.”

HOW EPA FACILITATES AUTO EMISSION FRAUD

Agency Doubles Down on Outmoded Dynamometers While Eschewing In-Use Data

Washington, DC — In the wake of Volkswagen's emissions cheating scandal, the U.S. Environmental Protection Agency still clings to the questionable testing methods that enabled the fraud, according to Public Employees for Environmental Responsibility (PEER). At the same time, the agency is not using actual on-the-road "in-use" data it collects from diesel vehicles to monitor emissions or efficiency.

EPA emission and fuel economy testing is conducted by putting

the vehicle on a dynamometer – essentially a big treadmill. VW engineers used software to control how the engines performed on the dynamometer while actual in-use emissions were up to 40 times higher. The episode vividly illustrates that dynamometer test results can no longer be assumed to correlate with in-use emissions.

This was a lesson that EPA supposedly learned almost twenty years ago when it discovered that heavy duty diesel engine manufacturers were using the same type of cheating strategy VW employed. In response, EPA forced the heavy duty engine manufacturers to sign a consent decree in 1998 which, among other things, mandated "in-use testing" of vehicles to show compliance. That decree also clearly stipulated that data from that "in-use testing program" were to be made public. Yet –

•□□□□□□□ Despite the vow to make these data public, EPA has decided that the years' worth of in-use data it has collected will not be released because they contain "Confidential Business Information";

•□□□□□□□ EPA has invested another $50 million for a heavy duty chassis dynamometer and test cell that it will roll out at a "Showcase" on October 13th; and

•□□□□□□□ Individual EPA engineers and the agency itself license patents on the engine technologies that EPA is then supposed to regulate.

"All of the claimed public health and economic benefits of emissions and fuel economy standards are based completely upon an unproven assumption – that dynamometer test reflect actual in-use experience," stated PEER Executive Director Jeff Ruch who is pressing EPA through a Freedom of Information Act request to post the in-use heavy duty diesel data as promised in the consent decree. "Independent analysis of in-use data may

reveal an even larger disconnect between lab tests and on-the-road performance."

Ironically, just as the VW episode underlines the fact that chassis dynamometer tests no longer can be trusted, EPA is preparing a new showcase test cell. In so doing, EPA managers brushed aside internal objections that further investment in a chassis dynamometer is unjustified, especially since no regulations require it.

"This scandal shows that dynamometer technology is a dinosaur yet EPA keeps pouring money into it," added Ruch, voicing frustration that past complaints from PEER about conflicts of interest within EPA on automotive technology have not been pursued. "The fact that the VW cheating was revealed by outsiders indicates the clubby and closed manner in which this arm of EPA operates."

Perhaps indicating that an internal reappraisal has begun, on Friday September 25th, EPA issued a terse letter to manufacturers that it "may test or require testing on any vehicle at a designated location [under] conditions that may be reasonably expected to be encountered in normal driving operation…" However, this step is a far cry from requiring manufacturers to monitor in-use fleet performance and report that data to EPA. Moreover, EPA stipulates that any new testing is aimed not at increasing regulatory reliance on on-road performance but is instead limited to "the purposes of investigating a potential defeat device."

TOP NEWS

Law360 Names Most Feared Plaintiffs Firms Of 2015

A handful of plaintiffs firms have won some of the largest and most impactful judgments and settlements over the past year, including a landmark $500 million settlement with JPMorgan Chase over its sale of mortgage-backed securities and a $663 million judgment against construction products giant Trinity Industries Inc. over defective guardrails. These firms are Law360's Most Feared Plaintiffs Firms of 2015.

China, US Make New Climate Change Commitments

Chinese President Xi Jinping said Friday during a visit to the White House that his country plans to launch a national emission trading system and implement a system to favor clean energy sources, as the world's two largest carbon emitters continue to cooperate on climate change.

Idaho Governor Sues DOI Over Sage-Grouse Land Use Plans

The federal government was hit Friday with a lawsuit from the state of Idaho over the designation of areas within the Great Basin as environmentally critical to the greater sage-grouse, the second such suit filed in as many days.

Oil, Trucking Groups Lose Challenge To Oregon Fuel Standard

An Oregon federal court has tossed a suit from energy and transportation industry groups seeking to overturn Oregon's recently enacted low-carbon fuel standard on constitutional and preemption grounds, ruling the program passes constitutional muster and does not violate federal law.

DOI To Pay Okla. Tribes $186M In Trust Land Management Row

The U.S. Department of the Interior will pay a combined $186 million to the Choctaw Nation and the Chickasaw Nation to resolve claims the government failed in its responsibility to protect the tribes' trust land, according to a filing in an Oklahoma federal court Friday.

States Tell DC Circ. To Vacate Entire EPA Mercury Rule

States and industry groups opposed to the U.S. Environmental Protection Agency's mercury rule on Thursday asked the D.C. Circuit to vacate the rule while the agency considers its costs, but the EPA argued that vacatur isn't necessary because the limited deficiency identified by the U.S. Supreme Court can be fixed quickly.

ANALYSIS

Grid Operators Key To CPP Success, FERC Chair Says

With regional cap-and-trade programs considered the best way for states to comply with the Clean Power Plan, regional grid operators will be crucial in ensuring such programs can be integrated into the U.S. electric grid without threatening reliability, Federal Energy Regulatory Commission Chairman Norman Bay told Law360 Friday.

POLICY & REGULATION

California Air Board Readopts Low Carbon Fuel Standard

The California Air Resources Board on Friday readopted a low carbon fuel standard which requires a 10 percent reduction by 2020 in the carbon intensity of transportation fuels.

EPA To Test More Vehicles For Emissions Fraud

The U.S. Environmental Protection Agency on Friday announced that it will start testing all automakers' light-duty diesel vehicles — both those on the road and those in production — for devices such as those that Volkswagen allegedly used to cheat federal emissions requirements.

ENFORCEMENT

EPA Sues Puerto Rican Co. Over Superfund Cleanup Costs

The U.S. Environmental Protection Agency took aim on Friday at the Puerto Rico Industrial Development Co. in a suit over contaminated groundwater in the Caribbean island's southeastern coastal region, seeking reimbursement for response costs at a National Priorities List site.

Halliburton Urges Dismissal Of Water Purification FCA Suit

Halliburton and other defendants urged a Virginia federal court Thursday to grant their motion to dismiss a False Claims Act suit accusing them of overbilling the government for water purification services, saying a May U.S. Supreme Court ruling that the claims were time-barred has effectively ended the case.

PG&E Corp. dodged punitive damages in Tesoro Refining & Marketing Co. LLC's contract suit claiming PG&E hid the dangers of a 2010 power outage that damaged a Tesoro refinery and released pollutants when a California federal judge said Friday that Tesoro's bid for additional damages came too late.

LITIGATION

DuPont Says Damages Not Justified In Drinking Water MDL

Nearly two weeks after the first trial began in multidistrict litigation accusing DuPont of contaminating drinking water, the chemical manufacturer told an Ohio federal court Thursday that a lack of evidence bars a plaintiff's claims of negligence, battery and emotional distress.

Calif. Tribe's Planned Casino Fights Off Neighbors' Challenges

A California federal judge shut down challenges Thursday to the Estom Yumeka Maidu Tribe of the Enterprise Rancheria's proposed casino and hotel in Yuba County, concluding the federal government didn't violate environmental or gaming laws when it agreed to take the proposed site into trust for the tribe.

Final Approval Of $341M Lac-Megantic Settlement Delayed

The final confirmation of a $341 million settlement for the victims of a fiery 2013 oil train derailment that killed 47 people in the town of Lac-Megantic, Quebec, was delayed Thursday to give the lone opposing party more time to agree on terms for withdrawing its objection.

Iowa Drainage Districts Want River Pollution Row Trimmed

Three county drainage districts told an Iowa federal court Thursday they cannot be sued for damages for allegedly discharging nitrate pollution into the Raccoon River without a permit and contaminating water that then flowed downstream into Des Moines.

Judge Axes Suit Against Groups Challenging Pa. Fracking Law

A Pennsylvania state court judge threw out a Butler County developer's lawsuit against five area residents and two environmental groups that oppose a local ordinance allowing fracking, one of the groups announced Friday.

Texas High Court Won't Review Water Well Damage Dispute

The Texas Supreme Court on Friday declined to hear a water authority's argument that governmental immunity shields it from a $1 million suit brought to enforce a settlement agreement that followed the authority's use of eminent domain to take a West Texas property.

Quebec Derailment Suit Misplaced In Texas, Railroad Co. Says

Canadian Pacific Railway Co. asked a Texas federal judge Thursday to dismiss a wrongful death and personal injury suit lodged by families of victims of a train derailment in Quebec, Canada, saying neither the company nor the suit relate to Texas.

EXPERT ANALYSIS

Methods To Minimize CERCLA Liability: Part 3

Arizona v. City of Tucson makes it more difficult in the Ninth Circuit to obtain approval of consent decrees proposed by state environmental agencies versus those proposed by the U.S. Environmental Protection Agency. In addition, the Ninth Circuit's standard makes obtaining approval for proposed consent decrees more difficult than in almost all other circuits, says Lester Brown of Perkins Coie LLP.

OPINION: Have Big Law Firms Lost Their Way?

My hope is that this article will not be seen as a rant by a senior trial lawyer. The truth is that some things get worse with the passage of time and it should be fair to comment upon such deterioration, says Dennis Suplee, a partner and former chairman of Schnader Harrison Segal & Lewis LLP.

LEGAL INDUSTRY

Trial Ace: Vinson & Elkins' William Sims Jr.

Vinson & Elkins LLP partner Williams D. Sims Jr. has been winning big in the courtroom for clients like the Dallas Cowboys and CBS for over 40 years, with his interest in trials dating back to teenage nights spent watching "Perry Mason" with his grandparents after a day's work at a family business in Mississippi.

6 IP Boutiques Punching Above Their Weight

Between corporate spending cuts to intellectual property litigation and talent poaching by bigger firms, IP boutiques face a bruising legal market, but some specialty shops are getting ahead of the competition, landing big-name clients and notching wins in court and at the Patent Trial and Appeal Board. Here, experts highlight IP boutiques that are standing out from the pack.

Dewey Jury Swamped In Evidence As Deliberations Drag On

Jurors in the Dewey & LeBoeuf LLP fraud trial completed their sixth full day of deliberations Friday without reaching a verdict, but their thoroughness was again on display as they requested a literal cartload of evidence related to the firm's byzantine accounting system.

More Attorneys Choosing To Power Down Devices In Court

With mobile lawyering an embedded fact of the legal profession, particularly in BigLaw, there is one place smartphones and tablets appear to be getting more scarce: The courtroom.

In Case You Missed It: Hottest Firms And Stories On Law360

TOP NEWS

Law360 Names Most Feared Plaintiffs Firms Of 2015

A handful of plaintiffs firms have won some of the largest and most impactful judgments and settlements over the past year, including a landmark $500 million settlement with JPMorgan Chase over its sale of mortgage-backed securities and a $663 million judgment against construction products giant Trinity Industries Inc. over defective guardrails. These firms are Law360's Most Feared Plaintiffs Firms of 2015.

China, US Make New Climate Change Commitments

Chinese President Xi Jinping said Friday during a visit to the White House that his country plans to launch a national emission trading system and implement a system to favor clean energy sources, as the world's two largest carbon emitters continue to cooperate on climate change.

Idaho Governor Sues DOI Over Sage-Grouse Land Use Plans

The federal government was hit Friday with a lawsuit from the state of Idaho over the designation of areas within the Great Basin as environmentally critical to the greater sage-grouse, the second such suit filed in as many days.

Oil, Trucking Groups Lose Challenge To Oregon Fuel Standard

An Oregon federal court has tossed a suit from energy and transportation industry groups seeking to overturn Oregon's recently enacted low-carbon fuel standard on constitutional and preemption grounds, ruling the program passes constitutional muster and does not violate federal law.

DOI To Pay Okla. Tribes $186M In Trust Land Management Row

The U.S. Department of the Interior will pay a combined $186 million to the Choctaw Nation and the Chickasaw Nation to resolve claims the government failed in its responsibility to protect the tribes' trust land, according to a filing in an Oklahoma federal court Friday.

States Tell DC Circ. To Vacate Entire EPA Mercury Rule

States and industry groups opposed to the U.S. Environmental Protection Agency's mercury rule on Thursday asked the D.C. Circuit to vacate the rule while the agency considers its costs, but the EPA argued that vacatur isn't necessary because the limited deficiency identified by the U.S. Supreme Court can be fixed quickly.

ANALYSIS

Grid Operators Key To CPP Success, FERC Chair Says

With regional cap-and-trade programs considered the best way for states to comply with the Clean Power Plan, regional grid operators will be crucial in ensuring such programs can be integrated into the U.S. electric grid without threatening reliability, Federal Energy Regulatory Commission Chairman Norman Bay told Law360 Friday.

POLICY & REGULATION

California Air Board Readopts Low Carbon Fuel Standard

The California Air Resources Board on Friday readopted a low carbon fuel standard which requires a 10 percent reduction by 2020 in the carbon intensity of transportation fuels.

EPA To Test More Vehicles For Emissions Fraud

The U.S. Environmental Protection Agency on Friday announced that it will start testing all automakers' light-duty diesel vehicles — both those on the road and those in production — for devices such as those that Volkswagen allegedly used to cheat federal emissions requirements.

ENFORCEMENT

EPA Sues Puerto Rican Co. Over Superfund Cleanup Costs

The U.S. Environmental Protection Agency took aim on Friday at the Puerto Rico Industrial Development Co. in a suit over contaminated groundwater in the Caribbean island's southeastern coastal region, seeking reimbursement for response costs at a National Priorities List site.

Halliburton Urges Dismissal Of Water Purification FCA Suit

Halliburton and other defendants urged a Virginia federal court Thursday to grant their motion to dismiss a False Claims Act suit accusing them of overbilling the government for water purification services, saying a May U.S. Supreme Court ruling that the claims were time-barred has effectively ended the case.

PG&E Corp. dodged punitive damages in Tesoro Refining & Marketing Co. LLC's contract suit claiming PG&E hid the dangers of a 2010 power outage that damaged a Tesoro refinery and released pollutants when a California federal judge said Friday that Tesoro's bid for additional damages came too late.

LITIGATION

DuPont Says Damages Not Justified In Drinking Water MDL

Nearly two weeks after the first trial began in multidistrict litigation accusing DuPont of contaminating drinking water, the chemical manufacturer told an Ohio federal court Thursday that a lack of evidence bars a plaintiff's claims of negligence, battery and emotional distress.

Calif. Tribe's Planned Casino Fights Off Neighbors' Challenges

A California federal judge shut down challenges Thursday to the Estom Yumeka Maidu Tribe of the Enterprise Rancheria's proposed casino and hotel in Yuba County, concluding the federal government didn't violate environmental or gaming laws when it agreed to take the proposed site into trust for the tribe.

Final Approval Of $341M Lac-Megantic Settlement Delayed

The final confirmation of a $341 million settlement for the victims of a fiery 2013 oil train derailment that killed 47 people in the town of Lac-Megantic, Quebec, was delayed Thursday to give the lone opposing party more time to agree on terms for withdrawing its objection.

Iowa Drainage Districts Want River Pollution Row Trimmed

Three county drainage districts told an Iowa federal court Thursday they cannot be sued for damages for allegedly discharging nitrate pollution into the Raccoon River without a permit and contaminating water that then flowed downstream into Des Moines.

Judge Axes Suit Against Groups Challenging Pa. Fracking Law

A Pennsylvania state court judge threw out a Butler County developer's lawsuit against five area residents and two environmental groups that oppose a local ordinance allowing fracking, one of the groups announced Friday.

Texas High Court Won't Review Water Well Damage Dispute

The Texas Supreme Court on Friday declined to hear a water authority's argument that governmental immunity shields it from a $1 million suit brought to enforce a settlement agreement that followed the authority's use of eminent domain to take a West Texas property.

Quebec Derailment Suit Misplaced In Texas, Railroad Co. Says

Canadian Pacific Railway Co. asked a Texas federal judge Thursday to dismiss a wrongful death and personal injury suit lodged by families of victims of a train derailment in Quebec, Canada, saying neither the company nor the suit relate to Texas.

EXPERT ANALYSIS

Methods To Minimize CERCLA Liability: Part 3

Arizona v. City of Tucson makes it more difficult in the Ninth Circuit to obtain approval of consent decrees proposed by state environmental agencies versus those proposed by the U.S. Environmental Protection Agency. In addition, the Ninth Circuit's standard makes obtaining approval for proposed consent decrees more difficult than in almost all other circuits, says Lester Brown of Perkins Coie LLP.

OPINION: Have Big Law Firms Lost Their Way?

My hope is that this article will not be seen as a rant by a senior trial lawyer. The truth is that some things get worse with the passage of time and it should be fair to comment upon such deterioration, says Dennis Suplee, a partner and former chairman of Schnader Harrison Segal & Lewis LLP.

LEGAL INDUSTRY

Trial Ace: Vinson & Elkins' William Sims Jr.

Vinson & Elkins LLP partner Williams D. Sims Jr. has been winning big in the courtroom for clients like the Dallas Cowboys and CBS for over 40 years, with his interest in trials dating back to teenage nights spent watching "Perry Mason" with his grandparents after a day's work at a family business in Mississippi.

6 IP Boutiques Punching Above Their Weight

Between corporate spending cuts to intellectual property litigation and talent poaching by bigger firms, IP boutiques face a bruising legal market, but some specialty shops are getting ahead of the competition, landing big-name clients and notching wins in court and at the Patent Trial and Appeal Board. Here, experts highlight IP boutiques that are standing out from the pack.

Dewey Jury Swamped In Evidence As Deliberations Drag On

Jurors in the Dewey & LeBoeuf LLP fraud trial completed their sixth full day of deliberations Friday without reaching a verdict, but their thoroughness was again on display as they requested a literal cartload of evidence related to the firm's byzantine accounting system.

More Attorneys Choosing To Power Down Devices In Court

With mobile lawyering an embedded fact of the legal profession, particularly in BigLaw, there is one place smartphones and tablets appear to be getting more scarce: The courtroom.

Ozone showdown drives busy week on energy policy

By Kevin Rogers

The Environmental Protection Agency this week plans to unveil its final rule to set new limits on ground-level ozone, while congressional Republicans keep the Obama administration's regulatory agenda in its crosshairs with a hearing on the economic impact of air quality rules.

EPA proposed lowering levels of the smog-forming pollution from the current 75 parts per

billion to within the range of 65 to 70 ppb. The agency also took public comment on leaving the current standard in place, or to lower it to 60 ppb, the level preferred by public health groups and environmentalists.

The rule, set to be released by October 1, has been the subject of a broad public relations fight. Groups like the National Association of Manufacturers have decried it as "the most expensive regulation in history," and other business groups warned it could thrust most of the country into non-compliance. They argue that the entire country should be in compliance with the 75 ppb standard before the agency moves to lower it.

Environmentalists and other proponents of a lower standard, however, say those concerns are overblown and contend the health benefits would counter any economic costs.

The ozone rule, as well as the agency's recently finalized power plant carbon emissions, will be the focus of a Tuesday Senate Environment and Public Works Committee hearing. Janet McCabe, the acting administrator for EPA's Office of Air and Radiation, is set to defend the rules against Chairman Sen. James Inhofe, R-Okla., a leading critic of the agency's regulatory agenda.

The committee's subpanels will also take aim at the administration's land and water management policies this week. On Tuesday, the Subcommittee on Fisheries, Water, and Wildlife will holding a briefing on improvements to the Endangered Species Act, hearing testimony from Fish and Wildlife Service Director Dan Ashe, Wyoming Gov. Matt Mead and Montana Gov. Steve Bullock.

The briefing comes a week after the Interior Department announced that the greater sage grouse wouldn't require federal Endangered Species Act protections due to a first-of-its-kind land management plan across 11 states. While that plan has the backing of Mead and Bullock, some Republicans and industry group said the plan resulted in a de facto listing of the bird.

The Subcommittee on Wednesday will hold a hearing examining the role the Army Corps of Engineers played in developing EPA's controversial Clean Water Rule, which seeks to clarify what bodies of water the federal government can regulate. Opponents of the rule have characterized it as a power grab aimed at limiting state authority over waterways.

The House also has a busy slate of energy and environmental action. The Energy and Commerce Committee plans a markup and vote of its energy reform package on Tuesday and Wednesday. The bill was set to be considered two weeks ago, but committee leaders sought more time to negotiate.

The bill would seek to update efficiency programs, boost development of new energy infrastructure and improve energy workforce training.

"We will take an important step in the effort to turn the page on the laws written during the days of energy scarcity, moving forward to embrace our energy abundance with policies that

say yes to energy," Chairman Rep. Fred Upton, R-Mich., said in announcing the markup.

On Thursday, the Subcommittee on Environment and the Economy will hold a hearing on improvements to nuclear material and waste shipments.

A bill to lift the ban on crude oil exports may also take another step closer to the House floor this week, as the House Rules Committee could hold a meeting to decide the floor proceedings for the bill. The Obama administration has declared opposition to the measure and a veto threat may be issued once the committee clears it for the floor.

The House Natural Resources Committee, meanwhile, plans to examine the Obama administration's public lands policies. On Tuesday, subcommittees will hold hearings to examine the economic impact of marine monument designations and federal forest management programs.

On Wednesday the full committee plans a hearing on federal lands and energy development which will include discussion of the sage grouse decision. Chairman Rep. Rob Bishop, R-Utah, decried the federal land management program as a bid to "control the West."

Shell says it will cease Alaska offshore Arctic drilling

By Dan Joling

ANCHORAGE, Alaska (AP) — Royal Dutch Shell will cease exploration in Arctic waters off Alaska's coast following disappointing results from an exploratory well backed by billions in investment and years of work.

The announcement was a huge blow to Shell, which was counting on offshore drilling in Alaska to help it drive future revenue. Environmentalists, however, had tried repeatedly to block the project and welcomed the news.

Shell has spent upward of $7 billion on Arctic offshore exploration, including $2.1 billion in 2008 for leases in the Chukchi Sea off Alaska's northwest coast, where an exploratory well about 80 miles off shore drilled to 6,800 feet but yielded disappointing results. Backed by a 28-vessel flotilla, drillers found indications of oil and gas but not in sufficient quantities to warrant more exploration at the site.

"Shell continues to see important exploration potential in the basin, and the area is likely to ultimately be of strategic importance to Alaska and the U.S.," Marvin Odum, president of Shell USA, said in The Hague, Netherlands. "However, this is a clearly disappointing exploration outcome for this part of the basin."

Survey: US gasoline price drop 9 cents over 2 weeks

By The Associated Press

CAMARILLO, Calif. (AP) — The U.S. average price of regular gasoline dropped 9 cents over the past two weeks to $2.35 a gallon.

Industry analyst Trilby Lundberg said Sunday that prices have plummeted from five weeks ago as U.S. retailers and refiners slashed their profit margins even as crude oil prices rose.

She says she expects prices could drop another few cents due to ample gasoline supplies and strong consumer demand.

The national average price of diesel fell 5 cents in the past two weeks to $2.58 a gallon.

More

CEO in deadliest US mine accident in 4 decades facing trial

By Jonathan Matisse

CHARLESTON, W.Va. (AP) — Former Massey Energy CEO Don Blankenship hits the courtroom for a criminal trial Thursday, facing charges that he conspired to break safety laws and lied to financial regulators about safety practices at the site of the deadliest U.S. mine explosion in more than four decades.

If he's convicted, it would be a rare instance where a CEO faces prison time.

In April 2010, an underground explosion ripped through Massey's former Upper Big Branch Mine in Montcoal, West Virginia, killing 29 workers. Blankenship will head to U.S. District Court in Charleston for the start of his jury trial.

More

Volkswagen faces major legal trouble in emissions scandal

By Michael Biesecker and Eric Tucker

WASHINGTON (AP) — Who knew about the deception, when did they know it and who directed it?

Those are among questions that state and federal investigators want answered as they plunge into the emissions scandal at Volkswagen that has cost the chief executive his job, caused stock prices to plummet and could result in billions of dollars in fines.

Legal experts say the German automaker is likely to face significant legal problems, including potential criminal charges, arising from its admission that 11 million of its diesel vehicles sold worldwide contained software specifically designed to help cheat emissions tests.

The Environmental Protection Agency has accused VW of installing sophisticated stealth software that enabled "clean diesel" versions of its Passat, Jetta, Golf and Beetle models to detect when they were being tested and emit less-polluting exhaust than in real-world driving conditions. The agency says the "defeat devices" allowed those models to belch up to 40 times the allowed amounts of harmful fumes in order to improve driving performance.

More

Appeals court to hear Utah endangered species suit

By Lindsay Whitehurst

SALT LAKE CITY (AP) — A court battle over a Utah prairie dog ruling that activists say could undermine the Endangered Species Act is set to come before a federal appeals court in Denver on Monday.

U.S. Department of Justice lawyers want a federal appeals court to overturn the decision striking down protections for prairie dogs found primarily in and around the southern Utah town of Cedar City.

The ruling came after residents in the town sued with help from lawyers from the Sacramento based Pacific Legal Foundation. They said federal protections were allowing the small, burrowing animals to take over the town's golf course, airport and cemetery and even interrupt funerals with their barking.

In a finding that lawyers say was the first of its kind, U.S. District Judge Dee Benson decided that the Commerce Clause doesn't allow the federal government to regulate animals found on private land in only one state.

Fishermen worry as black sea bass stake New England claim

By Patrick Whittle

PORTLAND, Maine (AP) — As waters warm off the coast of New England, black sea bass are moving north and, fishermen say, threatening the region's most valuable aquatic species: the lobster.

The influx of sea bass — among a number of species that are appearing in greater numbers off of Maine and New Hampshire as ocean temperatures climb — has some fishermen and lobstermen saying the best solution is to ease restrictions on catching the newcomers.

The sea bass prey on lobsters, a much more economically important commercial species and a key piece of New England's culture, and quotas that have drifted downward in recent years should be increased, fishermen said.

"What we need is a major increase in the allowable catch, both commercially and recreationally, because black sea bass are wiping out your lobsters," said Marc Hoffman, a Long Island, New York, recreational bass fisherman.

More

Brazil pledges to cut greenhouse gas emissions

By Karl Ritter

STOCKHOLM (AP) — Brazil on Sunday became the first major developing country to pledge an absolute reduction in greenhouse gas emissions for an envisioned global pact against climate change.

The world's seventh biggest greenhouse gas polluter said it would cut its emissions by 37 percent by 2025 from 2005 levels by reducing deforestation and boosting the share of renewable sources in its energy mix. It also indicated an "intended reduction" of 43 percent by 2030.

"Our goals are just as ambitious, if not more so, than those set by developed countries,"

President Dilma Rousseff said as she announced the targets at the U.N. in New York.

In talks on a new climate agreement, set to be adopted in Paris in December, developed countries are expected to shoulder the biggest responsibility for cutting emissions of carbon dioxide and other greenhouse gases. For example, the U.S. has pledged to reduce its emissions by 26-28 percent between 2005 and 2025.

More

Hollande optimistic about Paris climate conference

By The Associated Press

UNITED NATIONS (AP) — France's president said Sunday he's optimistic a global climate summit in Paris later this year will reach an agreement, but more work is needed to determine how ambitious it will be.

Francois Hollande told reporters after a lunch with about 30 other leaders gathered at the U.N. that 81 countries have so far submitted national commitments toward fighting climate change, and he called on others to have their plans ready well before the Nov. 30-Dec.11 conference.

Hollande said "there is work to do" to match leaders' desires for a deal in Paris with the conditions need to make it "credible and capable of settling questions about warming for decades to come."

Hollande said he's earmarking an additional $4 billion annually for development programs aimed at fighting climate change and other global goals agreed to at a U.N. summit this week.

Amid VW scandal, polluted Paris asks if time to dump diesel

By Angela Charlton and Sylvie Corbet

PARIS (AP) — Guidebooks rarely mention it, but Paris is one of the most polluted cities in the rich world. The Eiffel Tower is periodically shrouded in smog, and there's one key culprit: France's disproportionately heavy reliance on diesel fuel.

Critics are increasingly questioning the need for diesel vehicles, especially after last week's discovery that Volkswagen tricked drivers worldwide into thinking their diesel engines were much cleaner than they really are.

Sponsored Links

Paris' diesel-driven pollution problem is especially embarrassing for a city that's trying to be environmentally exemplary as it prepares to host crucial U.N. talks in two months on reducing emissions. City authorities banned all traffic from central Paris on Sunday and are trying to gradually forbid diesel altogether, as they try to clean up the capital's image.

But a nationwide crackdown on diesel remains taboo. And elsewhere in Europe - where the majority of new cars run on diesel engines versus just one-seventh worldwide - few are raising the alarm.

Russia, Ukraine reach deal on winter gas supplies

By John-Thor Dahlburg

BRUSSELS (AP) — Russia and Ukraine ended months of uncertainty and finally reached agreement Friday on supplies of natural gas to Ukraine for the coming winter, a high-ranking European Union official announced.

Maros Sefcovic, the EU Commission vice president for energy union, said the deal in talks he brokered assured that Ukraine would receive Russian gas for six months ending in March 2016.

The uncertainty over Russian gas supplies has taken place against the backdrop of the wider conflict between Moscow and Ukraine. In 2014, Russia annexed Crimea from Ukraine, and a pro-Russian armed insurgency continues in parts of eastern Ukraine, with Ukraine and NATO accusing Moscow of backing and supplying it.

Past gas disputes between Russia and Ukraine have led to cut-offs of supply, and one standoff in 2009 caused serious disruptions in shipments of Russian gas to EU countries as well.

Ozone showdown drives busy week on energy policy

By Kevin Rogers

The Environmental Protection Agency this week plans to unveil its final rule to set new limits on ground-level ozone, while congressional Republicans keep the Obama administration's regulatory agenda in its crosshairs with a hearing on the economic impact of air quality rules.

EPA proposed lowering levels of the smog-forming pollution from the current 75 parts per

billion to within the range of 65 to 70 ppb. The agency also took public comment on leaving the current standard in place, or to lower it to 60 ppb, the level preferred by public health groups and environmentalists.

The rule, set to be released by October 1, has been the subject of a broad public relations fight. Groups like the National Association of Manufacturers have decried it as "the most expensive regulation in history," and other business groups warned it could thrust most of the country into non-compliance. They argue that the entire country should be in compliance with the 75 ppb standard before the agency moves to lower it.

Environmentalists and other proponents of a lower standard, however, say those concerns are overblown and contend the health benefits would counter any economic costs.

The ozone rule, as well as the agency's recently finalized power plant carbon emissions, will be the focus of a Tuesday Senate Environment and Public Works Committee hearing. Janet McCabe, the acting administrator for EPA's Office of Air and Radiation, is set to defend the rules against Chairman Sen. James Inhofe, R-Okla., a leading critic of the agency's regulatory agenda.

The committee's subpanels will also take aim at the administration's land and water management policies this week. On Tuesday, the Subcommittee on Fisheries, Water, and Wildlife will holding a briefing on improvements to the Endangered Species Act, hearing testimony from Fish and Wildlife Service Director Dan Ashe, Wyoming Gov. Matt Mead and Montana Gov. Steve Bullock.

The briefing comes a week after the Interior Department announced that the greater sage grouse wouldn't require federal Endangered Species Act protections due to a first-of-its-kind land management plan across 11 states. While that plan has the backing of Mead and Bullock, some Republicans and industry group said the plan resulted in a de facto listing of the bird.

The Subcommittee on Wednesday will hold a hearing examining the role the Army Corps of Engineers played in developing EPA's controversial Clean Water Rule, which seeks to clarify what bodies of water the federal government can regulate. Opponents of the rule have characterized it as a power grab aimed at limiting state authority over waterways.

The House also has a busy slate of energy and environmental action. The Energy and Commerce Committee plans a markup and vote of its energy reform package on Tuesday and Wednesday. The bill was set to be considered two weeks ago, but committee leaders sought more time to negotiate.

The bill would seek to update efficiency programs, boost development of new energy infrastructure and improve energy workforce training.

"We will take an important step in the effort to turn the page on the laws written during the days of energy scarcity, moving forward to embrace our energy abundance with policies that

say yes to energy," Chairman Rep. Fred Upton, R-Mich., said in announcing the markup.

On Thursday, the Subcommittee on Environment and the Economy will hold a hearing on improvements to nuclear material and waste shipments.

A bill to lift the ban on crude oil exports may also take another step closer to the House floor this week, as the House Rules Committee could hold a meeting to decide the floor proceedings for the bill. The Obama administration has declared opposition to the measure and a veto threat may be issued once the committee clears it for the floor.

The House Natural Resources Committee, meanwhile, plans to examine the Obama administration's public lands policies. On Tuesday, subcommittees will hold hearings to examine the economic impact of marine monument designations and federal forest management programs.

On Wednesday the full committee plans a hearing on federal lands and energy development which will include discussion of the sage grouse decision. Chairman Rep. Rob Bishop, R-Utah, decried the federal land management program as a bid to "control the West."

Shell says it will cease Alaska offshore Arctic drilling

By Dan Joling

ANCHORAGE, Alaska (AP) — Royal Dutch Shell will cease exploration in Arctic waters off Alaska's coast following disappointing results from an exploratory well backed by billions in investment and years of work.

The announcement was a huge blow to Shell, which was counting on offshore drilling in Alaska to help it drive future revenue. Environmentalists, however, had tried repeatedly to block the project and welcomed the news.

Shell has spent upward of $7 billion on Arctic offshore exploration, including $2.1 billion in 2008 for leases in the Chukchi Sea off Alaska's northwest coast, where an exploratory well about 80 miles off shore drilled to 6,800 feet but yielded disappointing results. Backed by a 28-vessel flotilla, drillers found indications of oil and gas but not in sufficient quantities to warrant more exploration at the site.

"Shell continues to see important exploration potential in the basin, and the area is likely to ultimately be of strategic importance to Alaska and the U.S.," Marvin Odum, president of Shell USA, said in The Hague, Netherlands. "However, this is a clearly disappointing exploration outcome for this part of the basin."

Survey: US gasoline price drop 9 cents over 2 weeks

By The Associated Press

CAMARILLO, Calif. (AP) — The U.S. average price of regular gasoline dropped 9 cents over the past two weeks to $2.35 a gallon.

Industry analyst Trilby Lundberg said Sunday that prices have plummeted from five weeks ago as U.S. retailers and refiners slashed their profit margins even as crude oil prices rose.

She says she expects prices could drop another few cents due to ample gasoline supplies and strong consumer demand.

The national average price of diesel fell 5 cents in the past two weeks to $2.58 a gallon.

CEO in deadliest US mine accident in 4 decades facing trial

By Jonathan Matisse

CHARLESTON, W.Va. (AP) — Former Massey Energy CEO Don Blankenship hits the courtroom for a criminal trial Thursday, facing charges that he conspired to break safety laws and lied to financial regulators about safety practices at the site of the deadliest U.S. mine explosion in more than four decades.

If he's convicted, it would be a rare instance where a CEO faces prison time.

In April 2010, an underground explosion ripped through Massey's former Upper Big Branch Mine in Montcoal, West Virginia, killing 29 workers. Blankenship will head to U.S. District Court in Charleston for the start of his jury trial.

Volkswagen faces major legal trouble in emissions scandal

By Michael Biesecker and Eric Tucker

WASHINGTON (AP) — Who knew about the deception, when did they know it and who directed it?

Those are among questions that state and federal investigators want answered as they plunge into the emissions scandal at Volkswagen that has cost the chief executive his job, caused stock prices to plummet and could result in billions of dollars in fines.

Legal experts say the German automaker is likely to face significant legal problems, including potential criminal charges, arising from its admission that 11 million of its diesel vehicles sold worldwide contained software specifically designed to help cheat emissions tests.

The Environmental Protection Agency has accused VW of installing sophisticated stealth software that enabled "clean diesel" versions of its Passat, Jetta, Golf and Beetle models to detect when they were being tested and emit less-polluting exhaust than in real-world driving conditions. The agency says the "defeat devices" allowed those models to belch up to 40 times the allowed amounts of harmful fumes in order to improve driving performance.

Appeals court to hear Utah endangered species suit

By Lindsay Whitehurst

SALT LAKE CITY (AP) — A court battle over a Utah prairie dog ruling that activists say could undermine the Endangered Species Act is set to come before a federal appeals court in Denver on Monday.

U.S. Department of Justice lawyers want a federal appeals court to overturn the decision striking down protections for prairie dogs found primarily in and around the southern Utah town of Cedar City.

The ruling came after residents in the town sued with help from lawyers from the Sacramento based Pacific Legal Foundation. They said federal protections were allowing the small, burrowing animals to take over the town's golf course, airport and cemetery and even interrupt funerals with their barking.

In a finding that lawyers say was the first of its kind, U.S. District Judge Dee Benson decided that the Commerce Clause doesn't allow the federal government to regulate animals found on private land in only one state.

Fishermen worry as black sea bass stake New England claim

By Patrick Whittle

PORTLAND, Maine (AP) — As waters warm off the coast of New England, black sea bass are moving north and, fishermen say, threatening the region's most valuable aquatic species: the lobster.

The influx of sea bass — among a number of species that are appearing in greater numbers off of Maine and New Hampshire as ocean temperatures climb — has some fishermen and lobstermen saying the best solution is to ease restrictions on catching the newcomers.

The sea bass prey on lobsters, a much more economically important commercial species and a key piece of New England's culture, and quotas that have drifted downward in recent years should be increased, fishermen said.

"What we need is a major increase in the allowable catch, both commercially and recreationally, because black sea bass are wiping out your lobsters," said Marc Hoffman, a Long Island, New York, recreational bass fisherman.

More

Brazil pledges to cut greenhouse gas emissions

By Karl Ritter

STOCKHOLM (AP) — Brazil on Sunday became the first major developing country to pledge an absolute reduction in greenhouse gas emissions for an envisioned global pact against climate change.

The world's seventh biggest greenhouse gas polluter said it would cut its emissions by 37 percent by 2025 from 2005 levels by reducing deforestation and boosting the share of renewable sources in its energy mix. It also indicated an "intended reduction" of 43 percent by 2030.

"Our goals are just as ambitious, if not more so, than those set by developed countries,"

President Dilma Rousseff said as she announced the targets at the U.N. in New York.

In talks on a new climate agreement, set to be adopted in Paris in December, developed countries are expected to shoulder the biggest responsibility for cutting emissions of carbon dioxide and other greenhouse gases. For example, the U.S. has pledged to reduce its emissions by 26-28 percent between 2005 and 2025.

Hello Ms. Kaul,

As much of the public is now, I have been following the Volkswagen emissions investigation.

I would like to get involved with the investigation. I am a recent engineering graduate (with honors) and have had exposure to business, law, and public health curriculum in an interdisciplinary graduate program. This summer, I held an internship at the Food and Drug Administration regarding post-market surveillance of medical devices. I view this as an opportunity to learn from experts and to gain experience in a critical issue of regulatory compliance that may have significant impact on public welfare.

If you think that I may be able to contribute to the investigation, would you please put me into contact with the relevant parties?

Sincerely,

Ex. 6

Subject: Morning Consult Energy: Corker Wants White House to Consult With Senate Before Paris Talks; Shell to Halt Arctic Drilling

By Colleen Leahy

Today's Washington Brief

- In a letter to Secretary of State John Kerry, Sen-ate For-eign Re-la-tions Com-mit-tee Chair-man Bob Cork-er (R-Tenn.) questioned whether the hoped-for climate accord in Paris later this year will be dealt with as a formal treaty, and asked for an explanation if the answer to that question is no. Corker said the Obama administration is legally and constitutionally obliged to "engage in meaningful conversations with the Senate" as it prepares for the climate summit. (National Journal)

- The House passed legislation that would prohibit governmental agencies from considering the social cost of carbon during the construction permit application process. Seven Democrats joined Republicans to pass the measure 233-170. (The Hill)

- The federal government won't be shutting down, according to House Appropriations Committee Chairman Hal Rogers, who said he expects the House to pass a Senate spending bill that will fund the government through mid-December. And in energy, there will be hearings on federal forest management, transporting nuclear materials and more. (Morning Consult)

Today's Business Brief

- Royal Dutch Shell said it will end exploration in Arctic waters after results from an exploratory well were unsuccessful. The company's CEO said that while Shell will continue to consider the Arctic strategically important for exploration, it will halt activities "for the foreseeable future" due to the disappointing results. (The Associated Press)

- The Environmental Protection Agency said it would start including real-world road tests and check for emissions-falsification software, a big change from its previous practice of relying mostly on compliance statements from auto manufacturers and some lab testing. EPA's announcement comes after regulators in Europe and Brazil announced similar plans to step up their emissions testing protocols following the Volkswagen scandal. (The Wall Street

Journal)

- Microsoft has an internal carbon tax, the funds from which go into an investment fund for sustainability projects. The company isn't alone in this practice; internal corporate carbon pricing is a recent trend, with 437 companies using internal carbon pricing this year, up from 150 in 2014. (The New York Times)

Columbia Center on Global Energy Policy conversation with Zhang Guobao on China's energy future @ 5 p.m.

Friday
FERC hearing for Guttman Energy Inc. and PBF Holding Com @ 10 a.m.

General

House passes bill to limit environmental review process
Cristina Marcos, The Hill

The House passed legislation on Friday to streamline the environmental review process for infrastructure projects. Under the measure, federal agencies would only have to use one environmental impact statement and one environmental assessment as required by the National Environmental Policy Act.

EPA, Foreign Regulators Crack Down on Emissions Over Cheating Revelation
Amy Harder and Jason Chow, The Wall Street Journal

The U.S. Environmental Protection Agency, in a letter to auto manufacturers, said it plans to road-test vehicles, rather than primarily rely on statements from auto makers and some laboratory testing. The agency also indicated it would check for the presence of software designed to trick emissions testing.

Clinton explains shift on Keystone, other key issues
Jonathan Easley, The Hill

Clinton once said that she was "inclined" to sign off on the project because the U.S. was "either going to be dependent on dirty oil from the Gulf or dependent on dirty oil from Canada." "When I made that statement years ago, we did not have the kind of energy profile that we now have," Clinton said. "We did not have the full understanding of how the particular oil that would have been extracted from those tar sands was of a different degree of dirtiness and polluting in terms of greenhouse gasses."

Microsoft Leads Movement to Offset Emissions With Internal Carbon Tax
David Gelles, The New York Times

When Microsoft business unit managers calculate their profits or losses each quarter, they consider more than just sales and expenses. They also factor in the price of carbon. Even more radically, the business units are charged an internal tax by Microsoft based on their energy usage.

The Coming Week: Shutdown Averted as Lawmakers Mull Boehner Resignation
Fawn Johnson, Morning Consult

The House Natural Resources Committee will hold several hearings on environmental topics. The Subcommittee on Federal Lands will hold an oversight hearing on federal forest management on Tuesday. The full committee will hold a hearing titled "Respecting State Authority in Regards to Resource Management and Energy Development" on Wednesday.

Lawsuit challenges limits on industry that aim to save bird
The Associated Press

Two Nevada counties and some mining companies want a court to block new restrictions on mining, energy development and grazing that are meant to protect a declining bird species across millions of acres of the American West. The case appears to be the first challenge to the Interior Department's declaration that it can protect the greater sage grouse without hobbling the region's economy.

Obama: U.S. backs UN sustainability goals
Zachary R. Dowdy, Newsday

President Barack Obama Sunday said the United States has fully adopted the UN's 17-point agenda of global goals designed to eradicate extreme poverty and other forms of human suffering while conserving the environment.

Boehner Resignation Could Yield Productive Fall
Will Dobbs-Allsopp, Morning Consult

Republicans in Congress started to realize Friday they have a clearer path to finishing a host of must-pass agenda item than at any point in recent months. Boehner, liberated from the political challenge of keeping his own job, will spend his final weeks in office free of the intra-party feuding that has consumed the House Republican Conference for the past couple months. That could pave the way for a flurry of votes on otherwise controversial legislative deadlines.

Stocks Slide as Glencore, VW Buffet Global Markets; Bonds Climb
Nick Gentle and Daniel Tilles, Bloomberg News

European stocks and U.S. equity-index futures slid as tumbling automakers and mining companies sent ripples across global markets. In the U.S., Standard & Poor's 500 Index E-mini futures expiring in December fell 0.7 percent after the gauge slid for a second week.

Oil & Natural Gas

Oil prices fall on slowing global economic growth outlook
Amanda Cooper, Reuters

Oil prices fell on Monday, paring some of last week's 2 percent rally, despite evidence of slowing U.S. production and a fourth weekly increase in U.S. investor holdings of crude futures.

Shell says it will cease Alaska offshore Arctic drilling
Dan Joling, The Associated Press

Royal Dutch Shell will cease exploration in Arctic waters off Alaska's coast following disappointing results from an exploratory well backed by billions in investment and

years of work. The announcement was a huge blow to Shell, which was counting on offshore drilling in Alaska to help it drive future revenue.

California Board Backs New Limits on Carbon From Gas and Diesel
Ian Lovett, The New York Times

California air regulators on Friday approved a substantial cut to carbon pollution from gasoline and diesel fuels, a move that will force oil producers to reduce the amount of carbon generated by all transportation fuels in the state at least 10 percent by 2020. The action, coming two weeks after a stinging defeat for Gov. Jerry Brown's planned 50 percent cut in petroleum use by 2030, signaled his administration's determination to press forward with an aggressive environmental agenda through the regulatory process rather than by legislation.

North Dakota postpones deadline for natgas flaring rules
Ernest Scheyder, Reuters

North Dakota regulators on Thursday gave the energy industry 10 extra months to reduce the amount of natural gas burned off at oil wells, acquiescing to industry worries that construction delays have made it all but impossible to meet existing targets. Regulators in the No. 2 U.S. oil producing state stopped short of approving the full two-year extension sought by companies grappling with the steepest price downturn in years.

Alaska's Walker brushes aside reserves tax criticism
The Associated Press

Gov. Bill Walker on Friday brushed aside criticism from Republican lawmakers that they were blindsided by his call to reinstate the gas reserves tax during the upcoming special session. Walker said the tax is not meant to be punitive, only to spur movement on the natural gas pipeline project, estimated to cost between $45 billion and $65 billion. However, it remains only in the preliminary design stage, and the four partners have not decided whether to build it.

The $12 Billion Reason BP Isn't Worried About a Hostile Takeover
Bradley Olson and Laurel Brubacker Calkins, Bloomberg News

Oil giant BP Plc, which was said to be readying defenses for potential takeover offers, has a little-known ace in the hole: a disclaimer in its Macondo spill settlement that could tack $12.6 billion onto the price tag. A potential buyer might be forced to accelerate the payment of as much as two-thirds of the $18.7 billion in penalties the company agreed to pay the U.S. and several states, according to company filings.

Oil's Killing U.S. Power Generators, And They Don't Even Burn It
Mark Chediak and Naureen Malik, Bloomberg News

The glut of crude pooling up around the world has cut oil prices 23 percent in three months, and overseas natural gas supplies linked to crude are so cheap that America's gas exports can't compete. Traders speculating that more of the power-plant fuel will just remain in the U.S. have sent gas futures to the lowest seasonal level in 14 years.

Utilities & Infrastructure

SPP begins coordinating with states on Clean Power Plan compliance
Robert Walton, Utility Dive

The Southwest Power Pool is the first regional transmission organization (RTO) to openly engage state air regulators on Clean Power Plan compliance. SPP intends to revisit the cost estimates associated with compliance, and stressed to member states that a regional approach could be about 40% cheaper than a state attempting to go it alone.

Indiana watchdogs: 'Our fears are coming true' on utilities and efficiency
Kari Lydersen, Midwest Energy News

More than a year after Indiana lawmakers repealed the state's energy efficiency standard, utilities are scaling back their efforts while – advocates argue – seeking to overcharge ratepayers for their plans.

Renewables

State solar users would lose savings if proposal is OKd; SolarCity describes 'catastrophic' future
Ivan Penn, Los Angeles Times

Utilities contend that rooftop solar owners — often wealthier homeowners, who can afford the high upfront installation costs — haven't been paying their fair share of the cost of maintaining power lines, transformers, substations and power plants. Edison, San Diego Gas & Electric Co. and Pacific Gas & Electric Co. have proposed plans that include reducing compensation to rooftop solar owners for the electricity they generate and adding monthly fees of as much as $3 for every kilowatt of capacity they own.

Coal

What Germany learned from its war on coal
Annett Meiritz, Vox

The country offers a cautionary tale on why going green isn't always as smooth a ride as thought, and its *Energiewende* can offer some valuable lessons for the United States. The crucial part of Germany's energy transition was supposed to be phasing out coal, a major contributor to climate change. But that turned out to be much harder than anyone thought.

Nuclear

Tough times, no easy answers for Pilgrim Nuclear Power Plant
David Abel and Beth Healy, The Boston Globe

The federal Nuclear Regulatory Commission this month downgraded the safety rating of the 43-year-old plant in Plymouth, which it now rates as one of the three least-safe units among the nation's 99 reactors. The multimillion-dollar repairs now required could deal a death blow to Pilgrim, and in so doing, inflict significant damage to the state's effort to cut its carbon emissions — an effort that now relies heavily on nuclear power.

Climate

Top Senate Republican Demands Obama Disclose Plans for International Climate Change Negotiations
Ben Geman, National Journal

Sen-ate For-eign Re-la-tions Com-mit-tee Chair-man Bob Cork-er is press-ing the Obama ad-min-is-tra-tion to re-veal its plans for the in-ter-na-tion-al cli-mate-change ac-cord that na-tions hope to reach in Par-is late this year. In the let-ter ob-tained by Na-tion-al Journ-al, Cork-er asks wheth-er the ad-min-is-tra-tion plans to treat the hoped-for ac-cord as a form-al treaty that would be sub-mit-ted to the Sen-ate for ap-prov-al—and for the reas-on-ing if the an-swer is no.

Pope Francis: Harm to the Environment Is Harm to Humanity
Clare Foran, National Journal

The pontiff de-clared that "any harm done to the en-vir-on-ment there-fore is harm to hu-man-ity"—re-marks made while speak-ing through a trans-lat-or. Fran-cis also dove dir-ectly in-to the polit-ics of cli-mate change, ex-press-ing op-tim-ism that a strong agree-ment will be reached later this year at U.N. cli-mate talks set to be held in Par-is, a sum-mit widely viewed by en-vir-on-ment-al-ists and world lead-ers as a make-it-or-break-it mo-ment in the fight against glob-al warm-ing.

U.S., China Announce Climate Steps, $3.1 Billion Contribution
Colleen McCain Nelson and William Maudlin, The Wall Street Journal

The U.S. and China on Friday announced significant steps in their efforts to combat climate change, including a pledge by China to launch a program by 2017 to cap some emissions and put a price on carbon and to contribute $3.1 billion to help poorer countries finance their own transition programs. The announcements showed the two countries' latest strategies for reaching emissions targets and their efforts to boost an international accord to reduce global carbon-dioxide emissions, which is meant to be wrapped up in December.

Limited Progress Seen Even as More Nations Step Up on Climate
Justin Gillis and Somini Sengupta, The New York Times

The pledges that countries are making to battle climate change would still allow the world to heat up by more than 6 degrees Fahrenheit, a new analysis shows, a level that scientists say is likely to produce catastrophes ranging from food shortages to widespread extinctions of plant and animal life. Yet, in the world of global climate politics, that counts as progress.

Yet another survey suggests the climate change 'debate' is settled among scientists
Chelsea Harvey, The Washington Post

Using responses from nearly 700 biophysical scientists, a survey published Thursday in the journal Environmental Research Letters finds that approximately 92 percent of them believe that human-caused climate change is really happening. "These results show again that climate science is trusted, is mature, is reliable," said Stuart Carlton, a coastal ecosystem and social science specialist at Texas Sea Grant (formerly at Purdue University, while the survey was being completed) and the study's lead author.

Opinions, Editorials & Perspectives

The Francis climate homily
Barry Rabe, The Brookings Institution

Preparing for the future is never easy. But attempting to mitigate climate change essentially means seeking behavioral changes in the near term (more costs, some adjustments) to increase the prospect that future generations might have a better future (and reduce costs in the long-run). Given what we know about the behavior of political officials and aspirants, why would anyone want to go near this issue? And then there was Francis.

The Sage Grouse Switcheroo
Editorial Board, The Wall Street Journal

The Interior Department decided last week not to classify the greater sage grouse as

an endangered species, ending five years of deliberation. Some are hailing this as thought-to-be-extinct government restraint, but it's really political cover for other plans that will do as much or more economic harm.

Volkswagen's new CEO must tackle the 'culture of arrogance'
Doron Levin, Fortune

Matthias Mueller who was appointed Volkswagen AG's chief executive officer on Friday doesn't have an easy job. As a result of the diesel emissions scandal, which forced Martin Winterkorn to resign, VW faces a welter of legal sanctions and civil lawsuits, 11 million diesel vehicles that don't meet emissions standards, as well as the looming risk that consumers will boycott its vehicles.

How will the Obama administration's Clean Power Plan affect Metro areas?
Thomas Young and Alexandria Icenhower, The Brookings Institution

Meeting the carbon reduction targets will be left to the states, but Brookings Fellow Adie Tomer, Senior Fellow Robert Puentes, and Senior Research Assistant Joseph Kane argue that "metro areas should also be a big part of [the Clean Power Plan] discussion."

Research Reports, Issue Briefs & Case Studies

The climate change consensus extends beyond climate scientists
J S Carlton et al., Environmental Research Letters

The extent to which non-climate scientists are skeptical of climate science has not been studied via direct survey. Here we report on a survey of biophysical scientists across disciplines at universities in the Big 10 Conference. Most respondents (93.6%) believe that mean temperatures have risen and most (91.9%) believe in an anthropogenic contribution to rising temperatures. Respondents strongly believe that climate science is credible (mean credibility score 6.67/7). Those who disagree about climate change disagree over basic facts (e.g., the effects of CO_2 on climate) and have different cultural and political values.

Subject: Morning Consult Energy: Corker Wants White House to Consult With Senate Before Paris Talks; Shell to Halt Arctic Drilling

By Colleen Leahy

Today's Washington Brief

- In a letter to Secretary of State John Kerry, Sen-ate For-eign Re-la-tions Com-mit-tee Chair-man Bob Cork-er (R-Tenn.) questioned whether the hoped-for climate accord in Paris later this year will be dealt with as a formal treaty, and asked for an explanation if the answer to that question is no. Corker said the Obama administration is legally and constitutionally obliged to "engage in meaningful conversations with the Senate" as it prepares for the climate summit. (National Journal)

- The House passed legislation that would prohibit governmental agencies from considering the social cost of carbon during the construction permit application process. Seven Democrats joined Republicans to pass the measure 233-170. (The Hill)

- The federal government won't be shutting down, according to House Appropriations Committee Chairman Hal Rogers, who said he expects the House to pass a Senate spending bill that will fund the government through mid-December. And in energy, there will be hearings on federal forest management, transporting nuclear materials and more. (Morning Consult)

Today's Business Brief

- Royal Dutch Shell said it will end exploration in Arctic waters after results from an exploratory well were unsuccessful. The company's CEO said that while Shell will continue to consider the Arctic strategically important for exploration, it will halt activities "for the foreseeable future" due to the disappointing results. (The Associated Press)

- The Environmental Protection Agency said it would start including real-world road tests and check for emissions-falsification software, a big change from its previous practice of relying mostly on compliance statements from auto manufacturers and some lab testing. EPA's announcement comes after regulators in Europe and Brazil announced similar plans to step up their emissions testing protocols following the Volkswagen scandal. (The Wall Street

Journal)

- Microsoft has an internal carbon tax, the funds from which go into an investment fund for sustainability projects. The company isn't alone in this practice; internal corporate carbon pricing is a recent trend, with 437 companies using internal carbon pricing this year, up from 150 in 2014. (The New York Times)

General

House passes bill to limit environmental review process
Cristina Marcos, The Hill

The House passed legislation on Friday to streamline the environmental review process for infrastructure projects. Under the measure, federal agencies would only have to use one environmental impact statement and one environmental assessment as required by the National Environmental Policy Act.

EPA, Foreign Regulators Crack Down on Emissions Over Cheating Revelation
Amy Harder and Jason Chow, The Wall Street Journal

The U.S. Environmental Protection Agency, in a letter to auto manufacturers, said it plans to road-test vehicles, rather than primarily rely on statements from auto makers and some laboratory testing. The agency also indicated it would check for the presence of software designed to trick emissions testing.

Clinton explains shift on Keystone, other key issues
Jonathan Easley, The Hill

Clinton once said that she was "inclined" to sign off on the project because the U.S. was "either going to be dependent on dirty oil from the Gulf or dependent on dirty oil from Canada." "When I made that statement years ago, we did not have the kind of energy profile that we now have," Clinton said. "We did not have the full understanding of how the particular oil that would have been extracted from those tar sands was of a different degree of dirtiness and polluting in terms of greenhouse gasses."

Microsoft Leads Movement to Offset Emissions With Internal Carbon Tax
David Gelles, The New York Times

When Microsoft business unit managers calculate their profits or losses each quarter, they consider more than just sales and expenses. They also factor in the price of carbon. Even more radically, the business units are charged an internal tax by Microsoft based on their energy usage.

The Coming Week: Shutdown Averted as Lawmakers Mull Boehner Resignation
Fawn Johnson, Morning Consult

The House Natural Resources Committee will hold several hearings on environmental topics. The Subcommittee on Federal Lands will hold an oversight hearing on federal forest management on Tuesday. The full committee will hold a hearing titled "Respecting State Authority in Regards to Resource Management and Energy Development" on Wednesday.

Lawsuit challenges limits on industry that aim to save bird
The Associated Press

Two Nevada counties and some mining companies want a court to block new restrictions on mining, energy development and grazing that are meant to protect a declining bird species across millions of acres of the American West. The case appears to be the first challenge to the Interior Department's declaration that it can protect the greater sage grouse without hobbling the region's economy.

Obama: U.S. backs UN sustainability goals
Zachary R. Dowdy, Newsday

President Barack Obama Sunday said the United States has fully adopted the UN's 17-point agenda of global goals designed to eradicate extreme poverty and other forms of human suffering while conserving the environment.

Boehner Resignation Could Yield Productive Fall
Will Dobbs-Allsopp, Morning Consult

Republicans in Congress started to realize Friday they have a clearer path to finishing a host of must-pass agenda item than at any point in recent months. Boehner, liberated from the political challenge of keeping his own job, will spend his final weeks in office free of the intra-party feuding that has consumed the House Republican Conference for the past couple months. That could pave the way for a flurry of votes on otherwise controversial legislative deadlines.

Stocks Slide as Glencore, VW Buffet Global Markets; Bonds Climb
Nick Gentle and Daniel Tilles, Bloomberg News

European stocks and U.S. equity-index futures slid as tumbling automakers and mining companies sent ripples across global markets. In the U.S., Standard & Poor's 500 Index E-mini futures expiring in December fell 0.7 percent after the gauge slid for a second week.

Oil & Natural Gas

Oil prices fall on slowing global economic growth outlook
Amanda Cooper, Reuters

Oil prices fell on Monday, paring some of last week's 2 percent rally, despite evidence of slowing U.S. production and a fourth weekly increase in U.S. investor holdings of crude futures.

Shell says it will cease Alaska offshore Arctic drilling
Dan Joling, The Associated Press

Royal Dutch Shell will cease exploration in Arctic waters off Alaska's coast following disappointing results from an exploratory well backed by billions in investment and

years of work. The announcement was a huge blow to Shell, which was counting on offshore drilling in Alaska to help it drive future revenue.

California Board Backs New Limits on Carbon From Gas and Diesel
Ian Lovett, The New York Times

California air regulators on Friday approved a substantial cut to carbon pollution from gasoline and diesel fuels, a move that will force oil producers to reduce the amount of carbon generated by all transportation fuels in the state at least 10 percent by 2020. The action, coming two weeks after a stinging defeat for Gov. Jerry Brown's planned 50 percent cut in petroleum use by 2030, signaled his administration's determination to press forward with an aggressive environmental agenda through the regulatory process rather than by legislation.

North Dakota postpones deadline for natgas flaring rules
Ernest Scheyder, Reuters

North Dakota regulators on Thursday gave the energy industry 10 extra months to reduce the amount of natural gas burned off at oil wells, acquiescing to industry worries that construction delays have made it all but impossible to meet existing targets. Regulators in the No. 2 U.S. oil producing state stopped short of approving the full two-year extension sought by companies grappling with the steepest price downturn in years.

Alaska's Walker brushes aside reserves tax criticism
The Associated Press

Gov. Bill Walker on Friday brushed aside criticism from Republican lawmakers that they were blindsided by his call to reinstate the gas reserves tax during the upcoming special session. Walker said the tax is not meant to be punitive, only to spur movement on the natural gas pipeline project, estimated to cost between $45 billion and $65 billion. However, it remains only in the preliminary design stage, and the four partners have not decided whether to build it.

The $12 Billion Reason BP Isn't Worried About a Hostile Takeover
Bradley Olson and Laurel Brubacker Calkins, Bloomberg News

Oil giant BP Plc, which was said to be readying defenses for potential takeover offers, has a little-known ace in the hole: a disclaimer in its Macondo spill settlement that could tack $12.6 billion onto the price tag. A potential buyer might be forced to accelerate the payment of as much as two-thirds of the $18.7 billion in penalties the company agreed to pay the U.S. and several states, according to company filings.

Oil's Killing U.S. Power Generators, And They Don't Even Burn It
Mark Chediak and Naureen Malik, Bloomberg News

The glut of crude pooling up around the world has cut oil prices 23 percent in three months, and overseas natural gas supplies linked to crude are so cheap that America's gas exports can't compete. Traders speculating that more of the power-plant fuel will just remain in the U.S. have sent gas futures to the lowest seasonal level in 14 years.

Utilities & Infrastructure

SPP begins coordinating with states on Clean Power Plan compliance
Robert Walton, Utility Dive

The Southwest Power Pool is the first regional transmission organization (RTO) to openly engage state air regulators on Clean Power Plan compliance. SPP intends to revisit the cost estimates associated with compliance, and stressed to member states that a regional approach could be about 40% cheaper than a state attempting to go it alone.

Indiana watchdogs: 'Our fears are coming true' on utilities and efficiency
Kari Lydersen, Midwest Energy News

More than a year after Indiana lawmakers repealed the state's energy efficiency standard, utilities are scaling back their efforts while – advocates argue – seeking to overcharge ratepayers for their plans.

Renewables

State solar users would lose savings if proposal is OKd; SolarCity describes 'catastrophic' future
Ivan Penn, Los Angeles Times

Utilities contend that rooftop solar owners — often wealthier homeowners, who can afford the high upfront installation costs — haven't been paying their fair share of the cost of maintaining power lines, transformers, substations and power plants. Edison, San Diego Gas & Electric Co. and Pacific Gas & Electric Co. have proposed plans that include reducing compensation to rooftop solar owners for the electricity they generate and adding monthly fees of as much as $3 for every kilowatt of capacity they own.

Coal

What Germany learned from its war on coal
Annett Meiritz, Vox

The country offers a cautionary tale on why going green isn't always as smooth a ride as thought, and its *Energiewende* can offer some valuable lessons for the United States. The crucial part of Germany's energy transition was supposed to be phasing out coal, a major contributor to climate change. But that turned out to be much harder than anyone thought.

Nuclear

Tough times, no easy answers for Pilgrim Nuclear Power Plant
David Abel and Beth Healy, The Boston Globe

The federal Nuclear Regulatory Commission this month downgraded the safety rating of the 43-year-old plant in Plymouth, which it now rates as one of the three least-safe units among the nation's 99 reactors. The multimillion-dollar repairs now required could deal a death blow to Pilgrim, and in so doing, inflict significant damage to the state's effort to cut its carbon emissions — an effort that now relies heavily on nuclear power.

Climate

Top Senate Republican Demands Obama Disclose Plans for International Climate Change Negotiations
Ben Geman, National Journal

Sen-ate For-eign Re-la-tions Com-mit-tee Chair-man Bob Cork-er is press-ing the Obama ad-min-is-tra-tion to re-veal its plans for the in-ter-na-tion-al cli-mate-change ac-cord that na-tions hope to reach in Par-is late this year. In the let-ter ob-tained by Na-tion-al Journ-al, Cork-er asks wheth-er the ad-min-is-tra-tion plans to treat the hoped-for ac-cord as a form-al treaty that would be sub-mit-ted to the Sen-ate for ap-prov-al—and for the reas-on-ing if the an-swer is no.

Pope Francis: Harm to the Environment Is Harm to Humanity
Clare Foran, National Journal

The pontiff de-clared that "any harm done to the en-vir-on-ment there-fore is harm to hu-man-ity"—re-marks made while speak-ing through a trans-lat-or. Fran-cis also dove dir-ectly in-to the polit-ics of cli-mate change, ex-press-ing op-tim-ism that a strong agree-ment will be reached later this year at U.N. cli-mate talks set to be held in Par-is, a sum-mit widely viewed by en-vir-on-ment-al-ists and world lead-ers as a make-it-or-break-it mo-ment in the fight against glob-al warm-ing.

U.S., China Announce Climate Steps, $3.1 Billion Contribution
Colleen McCain Nelson and William Maudlin, The Wall Street Journal

The U.S. and China on Friday announced significant steps in their efforts to combat climate change, including a pledge by China to launch a program by 2017 to cap some emissions and put a price on carbon and to contribute $3.1 billion to help poorer countries finance their own transition programs. The announcements showed the two countries' latest strategies for reaching emissions targets and their efforts to boost an international accord to reduce global carbon-dioxide emissions, which is meant to be wrapped up in December.

Limited Progress Seen Even as More Nations Step Up on Climate
Justin Gillis and Somini Sengupta, The New York Times

The pledges that countries are making to battle climate change would still allow the world to heat up by more than 6 degrees Fahrenheit, a new analysis shows, a level that scientists say is likely to produce catastrophes ranging from food shortages to widespread extinctions of plant and animal life. Yet, in the world of global climate politics, that counts as progress.

Yet another survey suggests the climate change 'debate' is settled among scientists
Chelsea Harvey, The Washington Post

Using responses from nearly 700 biophysical scientists, a survey published Thursday in the journal Environmental Research Letters finds that approximately 92 percent of them believe that human-caused climate change is really happening. "These results show again that climate science is trusted, is mature, is reliable," said Stuart Carlton, a coastal ecosystem and social science specialist at Texas Sea Grant (formerly at Purdue University, while the survey was being completed) and the study's lead author.

Opinions, Editorials & Perspectives

The Francis climate homily
Barry Rabe, The Brookings Institution

Preparing for the future is never easy. But attempting to mitigate climate change essentially means seeking behavioral changes in the near term (more costs, some adjustments) to increase the prospect that future generations might have a better future (and reduce costs in the long-run). Given what we know about the behavior of political officials and aspirants, why would anyone want to go near this issue? And then there was Francis.

The Sage Grouse Switcheroo
Editorial Board, The Wall Street Journal

The Interior Department decided last week not to classify the greater sage grouse as

an endangered species, ending five years of deliberation. Some are hailing this as thought-to-be-extinct government restraint, but it's really political cover for other plans that will do as much or more economic harm.

Volkswagen's new CEO must tackle the 'culture of arrogance'
Doron Levin, Fortune

Matthias Mueller who was appointed Volkswagen AG's chief executive officer on Friday doesn't have an easy job. As a result of the diesel emissions scandal, which forced Martin Winterkorn to resign, VW faces a welter of legal sanctions and civil lawsuits, 11 million diesel vehicles that don't meet emissions standards, as well as the looming risk that consumers will boycott its vehicles.

How will the Obama administration's Clean Power Plan affect Metro areas?
Thomas Young and Alexandria Icenhower, The Brookings Institution

Meeting the carbon reduction targets will be left to the states, but Brookings Fellow Adie Tomer, Senior Fellow Robert Puentes, and Senior Research Assistant Joseph Kane argue that "metro areas should also be a big part of [the Clean Power Plan] discussion."

Research Reports, Issue Briefs & Case Studies

The climate change consensus extends beyond climate scientists
J S Carlton et al., Environmental Research Letters

The extent to which non-climate scientists are skeptical of climate science has not been studied via direct survey. Here we report on a survey of biophysical scientists across disciplines at universities in the Big 10 Conference. Most respondents (93.6%) believe that mean temperatures have risen and most (91.9%) believe in an anthropogenic contribution to rising temperatures. Respondents strongly believe that climate science is credible (mean credibility score 6.67/7). Those who disagree about climate change disagree over basic facts (e.g., the effects of CO_2 on climate) and have different cultural and political values.

Subject: Morning Consult Energy: Corker Wants White House to Consult With Senate Before Paris Talks; Shell to Halt Arctic Drilling

By Colleen Leahy

Today's Washington Brief

- In a letter to Secretary of State John Kerry, Sen-ate For-eign Re-la-tions Com-mit-tee Chair-man Bob Cork-er (R-Tenn.) questioned whether the hoped-for climate accord in Paris later this year will be dealt with as a formal treaty, and asked for an explanation if the answer to that question is no. Corker said the Obama administration is legally and constitutionally obliged to "engage in meaningful conversations with the Senate" as it prepares for the climate summit. (National Journal)

- The House passed legislation that would prohibit governmental agencies from considering the social cost of carbon during the construction permit application process. Seven Democrats joined Republicans to pass the measure 233-170. (The Hill)

- The federal government won't be shutting down, according to House Appropriations Committee Chairman Hal Rogers, who said he expects the House to pass a Senate spending bill that will fund the government through mid-December. And in energy, there will be hearings on federal forest management, transporting nuclear materials and more. (Morning Consult)

Today's Business Brief

- Royal Dutch Shell said it will end exploration in Arctic waters after results from an exploratory well were unsuccessful. The company's CEO said that while Shell will continue to consider the Arctic strategically important for exploration, it will halt activities "for the foreseeable future" due to the disappointing results. (The Associated Press)

- The Environmental Protection Agency said it would start including real-world road tests and check for emissions-falsification software, a big change from its previous practice of relying mostly on compliance statements from auto manufacturers and some lab testing. EPA's announcement comes after regulators in Europe and Brazil announced similar plans to step up their emissions testing protocols following the Volkswagen scandal. (The Wall Street

Journal)

- Microsoft has an internal carbon tax, the funds from which go into an investment fund for sustainability projects. The company isn't alone in this practice; internal corporate carbon pricing is a recent trend, with 437 companies using internal carbon pricing this year, up from 150 in 2014. (The New York Times)

Friday
FERC hearing for Guttman Energy Inc. and PBF Holding Com @ 10 a.m.

General

House passes bill to limit environmental review process
Cristina Marcos, The Hill

The House passed legislation on Friday to streamline the environmental review process for infrastructure projects. Under the measure, federal agencies would only have to use one environmental impact statement and one environmental assessment as required by the National Environmental Policy Act.

EPA, Foreign Regulators Crack Down on Emissions Over Cheating Revelation
Amy Harder and Jason Chow, The Wall Street Journal

The U.S. Environmental Protection Agency, in a letter to auto manufacturers, said it plans to road-test vehicles, rather than primarily rely on statements from auto makers and some laboratory testing. The agency also indicated it would check for the presence of software designed to trick emissions testing.

Clinton explains shift on Keystone, other key issues
Jonathan Easley, The Hill

Clinton once said that she was "inclined" to sign off on the project because the U.S. was "either going to be dependent on dirty oil from the Gulf or dependent on dirty oil from Canada." "When I made that statement years ago, we did not have the kind of energy profile that we now have," Clinton said. "We did not have the full understanding of how the particular oil that would have been extracted from those tar sands was of a different degree of dirtiness and polluting in terms of greenhouse gasses."

Microsoft Leads Movement to Offset Emissions With Internal Carbon Tax
David Gelles, The New York Times

When Microsoft business unit managers calculate their profits or losses each quarter, they consider more than just sales and expenses. They also factor in the price of carbon. Even more radically, the business units are charged an internal tax by Microsoft based on their energy usage.

The Coming Week: Shutdown Averted as Lawmakers Mull Boehner Resignation
Fawn Johnson, Morning Consult

The House Natural Resources Committee will hold several hearings on environmental topics. The Subcommittee on Federal Lands will hold an oversight hearing on federal forest management on Tuesday. The full committee will hold a hearing titled "Respecting State Authority in Regards to Resource Management and Energy Development" on Wednesday.

Lawsuit challenges limits on industry that aim to save bird
The Associated Press

Two Nevada counties and some mining companies want a court to block new restrictions on mining, energy development and grazing that are meant to protect a declining bird species across millions of acres of the American West. The case appears to be the first challenge to the Interior Department's declaration that it can protect the greater sage grouse without hobbling the region's economy.

Obama: U.S. backs UN sustainability goals
Zachary R. Dowdy, Newsday

President Barack Obama Sunday said the United States has fully adopted the UN's 17-point agenda of global goals designed to eradicate extreme poverty and other forms of human suffering while conserving the environment.

Boehner Resignation Could Yield Productive Fall
Will Dobbs-Allsopp, Morning Consult

Republicans in Congress started to realize Friday they have a clearer path to finishing a host of must-pass agenda item than at any point in recent months. Boehner, liberated from the political challenge of keeping his own job, will spend his final weeks in office free of the intra-party feuding that has consumed the House Republican Conference for the past couple months. That could pave the way for a flurry of votes on otherwise controversial legislative deadlines.

Stocks Slide as Glencore, VW Buffet Global Markets; Bonds Climb
Nick Gentle and Daniel Tilles, Bloomberg News

European stocks and U.S. equity-index futures slid as tumbling automakers and mining companies sent ripples across global markets. In the U.S., Standard & Poor's 500 Index E-mini futures expiring in December fell 0.7 percent after the gauge slid for a second week.

Oil & Natural Gas

Oil prices fall on slowing global economic growth outlook
Amanda Cooper, Reuters

Oil prices fell on Monday, paring some of last week's 2 percent rally, despite evidence of slowing U.S. production and a fourth weekly increase in U.S. investor holdings of crude futures.

Shell says it will cease Alaska offshore Arctic drilling
Dan Joling, The Associated Press

Royal Dutch Shell will cease exploration in Arctic waters off Alaska's coast following disappointing results from an exploratory well backed by billions in investment and

years of work. The announcement was a huge blow to Shell, which was counting on offshore drilling in Alaska to help it drive future revenue.

California Board Backs New Limits on Carbon From Gas and Diesel
Ian Lovett, The New York Times

California air regulators on Friday approved a substantial cut to carbon pollution from gasoline and diesel fuels, a move that will force oil producers to reduce the amount of carbon generated by all transportation fuels in the state at least 10 percent by 2020. The action, coming two weeks after a stinging defeat for Gov. Jerry Brown's planned 50 percent cut in petroleum use by 2030, signaled his administration's determination to press forward with an aggressive environmental agenda through the regulatory process rather than by legislation.

North Dakota postpones deadline for natgas flaring rules
Ernest Scheyder, Reuters

North Dakota regulators on Thursday gave the energy industry 10 extra months to reduce the amount of natural gas burned off at oil wells, acquiescing to industry worries that construction delays have made it all but impossible to meet existing targets. Regulators in the No. 2 U.S. oil producing state stopped short of approving the full two-year extension sought by companies grappling with the steepest price downturn in years.

Alaska's Walker brushes aside reserves tax criticism
The Associated Press

Gov. Bill Walker on Friday brushed aside criticism from Republican lawmakers that they were blindsided by his call to reinstate the gas reserves tax during the upcoming special session. Walker said the tax is not meant to be punitive, only to spur movement on the natural gas pipeline project, estimated to cost between $45 billion and $65 billion. However, it remains only in the preliminary design stage, and the four partners have not decided whether to build it.

The $12 Billion Reason BP Isn't Worried About a Hostile Takeover
Bradley Olson and Laurel Brubacker Calkins, Bloomberg News

Oil giant BP Plc, which was said to be readying defenses for potential takeover offers, has a little-known ace in the hole: a disclaimer in its Macondo spill settlement that could tack $12.6 billion onto the price tag. A potential buyer might be forced to accelerate the payment of as much as two-thirds of the $18.7 billion in penalties the company agreed to pay the U.S. and several states, according to company filings.

Oil's Killing U.S. Power Generators, And They Don't Even Burn It
Mark Chediak and Naureen Malik, Bloomberg News

The glut of crude pooling up around the world has cut oil prices 23 percent in three months, and overseas natural gas supplies linked to crude are so cheap that America's gas exports can't compete. Traders speculating that more of the power-plant fuel will just remain in the U.S. have sent gas futures to the lowest seasonal level in 14 years.

Utilities & Infrastructure

SPP begins coordinating with states on Clean Power Plan compliance
Robert Walton, Utility Dive

The Southwest Power Pool is the first regional transmission organization (RTO) to openly engage state air regulators on Clean Power Plan compliance. SPP intends to revisit the cost estimates associated with compliance, and stressed to member states that a regional approach could be about 40% cheaper than a state attempting to go it alone.

Indiana watchdogs: 'Our fears are coming true' on utilities and efficiency
Kari Lydersen, Midwest Energy News

More than a year after Indiana lawmakers repealed the state's energy efficiency standard, utilities are scaling back their efforts while – advocates argue – seeking to overcharge ratepayers for their plans.

Renewables

State solar users would lose savings if proposal is OKd; SolarCity describes 'catastrophic' future
Ivan Penn, Los Angeles Times

Utilities contend that rooftop solar owners — often wealthier homeowners, who can afford the high upfront installation costs — haven't been paying their fair share of the cost of maintaining power lines, transformers, substations and power plants. Edison, San Diego Gas & Electric Co. and Pacific Gas & Electric Co. have proposed plans that include reducing compensation to rooftop solar owners for the electricity they generate and adding monthly fees of as much as $3 for every kilowatt of capacity they own.

Coal

What Germany learned from its war on coal
Annett Meiritz, Vox

The country offers a cautionary tale on why going green isn't always as smooth a ride as thought, and its *Energiewende* can offer some valuable lessons for the United States. The crucial part of Germany's energy transition was supposed to be phasing out coal, a major contributor to climate change. But that turned out to be much harder than anyone thought.

Nuclear

Tough times, no easy answers for Pilgrim Nuclear Power Plant
David Abel and Beth Healy, The Boston Globe

The federal Nuclear Regulatory Commission this month downgraded the safety rating of the 43-year-old plant in Plymouth, which it now rates as one of the three least-safe units among the nation's 99 reactors. The multimillion-dollar repairs now required could deal a death blow to Pilgrim, and in so doing, inflict significant damage to the state's effort to cut its carbon emissions — an effort that now relies heavily on nuclear power.

Climate

Top Senate Republican Demands Obama Disclose Plans for International Climate Change Negotiations
Ben Geman, National Journal

Sen-ate For-eign Re-la-tions Com-mit-tee Chair-man Bob Cork-er is press-ing the Obama ad-min-is-tra-tion to re-veal its plans for the in-ter-na-tion-al cli-mate-change ac-cord that na-tions hope to reach in Par-is late this year. In the let-ter ob-tained by Na-tion-al Journ-al, Cork-er asks wheth-er the ad-min-is-tra-tion plans to treat the hoped-for ac-cord as a form-al treaty that would be sub-mit-ted to the Sen-ate for ap-prov-al—and for the reas-on-ing if the an-swer is no.

Pope Francis: Harm to the Environment Is Harm to Humanity
Clare Foran, National Journal

The pontiff de-clared that "any harm done to the en-vir-on-ment there-fore is harm to hu-man-ity"—re-marks made while speak-ing through a trans-lat-or. Fran-cis also dove dir-ectly in-to the polit-ics of cli-mate change, ex-press-ing op-tim-ism that a strong agree-ment will be reached later this year at U.N. cli-mate talks set to be held in Par-is, a sum-mit widely viewed by en-vir-on-ment-al-ists and world lead-ers as a make-it-or-break-it mo-ment in the fight against glob-al warm-ing.

U.S., China Announce Climate Steps, $3.1 Billion Contribution
Colleen McCain Nelson and William Maudlin, The Wall Street Journal

The U.S. and China on Friday announced significant steps in their efforts to combat climate change, including a pledge by China to launch a program by 2017 to cap some emissions and put a price on carbon and to contribute $3.1 billion to help poorer countries finance their own transition programs. The announcements showed the two countries' latest strategies for reaching emissions targets and their efforts to boost an international accord to reduce global carbon-dioxide emissions, which is meant to be wrapped up in December.

Limited Progress Seen Even as More Nations Step Up on Climate
Justin Gillis and Somini Sengupta, The New York Times

The pledges that countries are making to battle climate change would still allow the world to heat up by more than 6 degrees Fahrenheit, a new analysis shows, a level that scientists say is likely to produce catastrophes ranging from food shortages to widespread extinctions of plant and animal life. Yet, in the world of global climate politics, that counts as progress.

Yet another survey suggests the climate change 'debate' is settled among scientists
Chelsea Harvey, The Washington Post

Using responses from nearly 700 biophysical scientists, a survey published Thursday in the journal Environmental Research Letters finds that approximately 92 percent of them believe that human-caused climate change is really happening. "These results show again that climate science is trusted, is mature, is reliable," said Stuart Carlton, a coastal ecosystem and social science specialist at Texas Sea Grant (formerly at Purdue University, while the survey was being completed) and the study's lead author.

Opinions, Editorials & Perspectives

The Francis climate homily
Barry Rabe, The Brookings Institution

Preparing for the future is never easy. But attempting to mitigate climate change essentially means seeking behavioral changes in the near term (more costs, some adjustments) to increase the prospect that future generations might have a better future (and reduce costs in the long-run). Given what we know about the behavior of political officials and aspirants, why would anyone want to go near this issue? And then there was Francis.

The Sage Grouse Switcheroo
Editorial Board, The Wall Street Journal

The Interior Department decided last week not to classify the greater sage grouse as

an endangered species, ending five years of deliberation. Some are hailing this as thought-to-be-extinct government restraint, but it's really political cover for other plans that will do as much or more economic harm.

Volkswagen's new CEO must tackle the 'culture of arrogance'
Doron Levin, Fortune

Matthias Mueller who was appointed Volkswagen AG's chief executive officer on Friday doesn't have an easy job. As a result of the diesel emissions scandal, which forced Martin Winterkorn to resign, VW faces a welter of legal sanctions and civil lawsuits, 11 million diesel vehicles that don't meet emissions standards, as well as the looming risk that consumers will boycott its vehicles.

How will the Obama administration's Clean Power Plan affect Metro areas?
Thomas Young and Alexandria Icenhower, The Brookings Institution

Meeting the carbon reduction targets will be left to the states, but Brookings Fellow Adie Tomer, Senior Fellow Robert Puentes, and Senior Research Assistant Joseph Kane argue that "metro areas should also be a big part of [the Clean Power Plan] discussion."

Research Reports, Issue Briefs & Case Studies

The climate change consensus extends beyond climate scientists
J S Carlton et al., Environmental Research Letters

The extent to which non-climate scientists are skeptical of climate science has not been studied via direct survey. Here we report on a survey of biophysical scientists across disciplines at universities in the Big 10 Conference. Most respondents (93.6%) believe that mean temperatures have risen and most (91.9%) believe in an anthropogenic contribution to rising temperatures. Respondents strongly believe that climate science is credible (mean credibility score 6.67/7). Those who disagree about climate change disagree over basic facts (e.g., the effects of CO_2 on climate) and have different cultural and political values.

Subject: OAR Shout Out

Dear Colleagues,

By now I'm sure that many of you have seen the news about Volkswagen. This Shout Out goes to the teams in OTAQ, OECA, OGC, OCIR, OPA and our partners at the California Air Resources Board (CARB) who uncovered the problem and worked quickly to bring it to light. Together they showed the world that the United States takes our standards to protect public health very seriously.

Here's a quick summary of what happened. Late last week, the agency issued a "notice of violation" (NOV) of the Clean Air Act to Volkswagen. The NOV alleges that several four-cylinder Volkswagen and Audi diesel cars from model years 2009-2015 are equipped with software that disables the vehicles' emission controls, causing them to emit smog- and soot-forming nitrogen oxides (NOx) at up to 40 times higher than the amount EPA standards allow. The software is smart enough to run the pollution controls during an emissions test, but to shut them off under normal driving conditions. This is what the Clean Air Act calls a "defeat device," and it's illegal.

Tipped off by an independent study from last year, OTAQ and CARB dug deeper, conducted further testing, and started asking the company some important questions. Not until early this month, after EPA and CARB demanded an explanation for the identified emission problems, did VW admit that the cars in question contained defeat devices.

After this admission, the OTAQ, OECA and CARB teams worked quickly to bring the facts as we knew them to public attention. This led up to last Friday's joint announcement by EPA and CARB.

Less than a week after that announcement, VW had divulged that the defeat device was installed in 11 million of its vehicles sold worldwide, the company's CEO had stepped down, and Germany's president called for an investigation and steps to ensure that this would never happen again.

I want to make clear that these cars are safe and legal to drive. OTAQ is providing information to motorists and will be working with Volkswagen to ensure the company implements a plan to fix these vehicles.

I also want to make clear that the headlines are not why we took action. As OTAQ Director Chris Grundler said to his team and OECA – "we showed, again, that EPA keeps its promises – that we are serious about securing the benefits we predict and promise the public will result from our standards." I couldn't say it any better.

And rest assured, our OTAQ compliance team is already taking steps to enhance our vehicle certification protocol to detect any future attempts at deploying this defeat device. So with that, this Shout Out goes to these folks across EPA and CARB (and we know additional staff will become involved in this over the coming months) - **OTAQ**: Byron Bunker, Janet Cohen, Linc Wehrly, Joel Ball, Jim Snyder, Holly Pugliese, Lee Cook, Ben Hengst, Erin Birgfeld, Tia Sutton, Jennifer France, Trish Suarez, Lisa Sun, David Levin, and Gwen Dietrich; **OECA**: John Senn, Rosemarie Kelley, Nick Conger, Phillip Brooks, Jacqueline Werner, Evan Belser, and Meetu Kaul; **OGC**: David Orlin and Mark Kataoka; **OPA**: Julia Valentine, Kristiene Gong, Jay Davis, Dan Abrams, and Laura Allen; and **OCIR:** Josh Lewis, Pat Haman, Caroline Emmerson, and Carolyn Levine.

See more information on the VW case on our website:
http://www3.epa.gov/otaq/cert/violations.htm.

Have a nice weekend everyone.

Janet

Subject: Final Agenda for the ARB-OTAQ Monthly Coordination Conference Call on Monday, September 28
Monthly ARB-EPA SL Call Agenda, Sept 28, 2015, Final.docx

Dear all –

The attached (also copied below) reflects the input I received from Alberto and Chris. Regarding the October 6 meetings in D.C., I proposed to Alberto and Chris under separate email yesterday that the EPA staff (Mike Olechiw in my Division) will work with the ARB staff (Ex. 7 to see if we need to make any changes to the light-duty Mid-term Evaluation meeting currently scheduled in D.C. with Volvo.

Thanks

Bill

Monthly ARB-OTAQ Senior Leadership Coordination Call

Monday, September 28, 2015 (11am-12pm Pacific, 2-3pm Eastern)

Call-in number: ph. Non-Responsive Participant Passcode: Non-Responsive

Agenda Items

1. Heavy-duty Phase 2 program development (15 minutes)

- □□□□□□□□ a high level overview of the EPA process for the final rule
- □□□□□□□□ discussion of the ARB process and opportunities for continued alignment

2. Light-duty MTE (10 minutes)

- □□□□□□□□ high-level take aways from recent Ford/FCA/GM meetings in Michigan
- □□□□□□□□ discussion of potential NGO meeting

3. If time allows – update from ARB on last week's Board meeting and LCFS

4. Other items?

[Note – prior to agenda item #5, anyone not working on the VW investigation will be asked to sign-off]

5. VW Coordination [Byron & Annette]

- □□□□□□□□
- □□□□□□□□
- □□□□□□□□
- □□□□□□□□

Ex. 5, 7

•□□□□□□□□ Ex. 5, 7

Upcoming Actions/Events of Potential Interest:

- October 13: Heavy-duty Vehicle Technology Showcase at EPA's Ann Arbor Laboratory

-

- Light-duty Mid-term Evaluation Meetings w/ ARB/NHTSA/EPA

o September 30: Jaguar-LandRover (Ann Arbor)

o October 6: Volvo (Washington)

o October 7: Honda (Ohio)

o October 15: Nissan (Tennessee)

o October 26: Mercedes (Ann Arbor)

o Honeywell/Toyota/Tesla (California)

-

- October 30: U. of Michigan Transportation, Economics, Energy, & Environment Conference in Ann Arbor (Alberto speaking?)

- December 3: EPA Mobile Source Technical Review Sub-committee (MSTRS) Meeting, Long Beach, California

- December 10/11 UC Davis STEP Fall Research Meeting (Karl and Chris coming?)

Subject: REQUEST EPA COMPLIANT CAR

RE: TRADE-IN of 2012 VW Jetta Sportwagen Diesel with compromised emissions.

Hello to All Concerned:

First of All, I love my car. I'm sorry that VW has compromised my trust. I have owned many VW's over my life and I want to own one that does not spew as many toxins as my current car.

We purchased a "Clean Diesel" VW Jetta Sportwagen Diesel 2012 new.Current mileage 25,690 approximately. A 2015 scandal determined that car does not meet EPA standards for Nox emissions.

Request trade-in for VW Golf SportWagen with AdBlue System to resolve this situation.

I am a conscientious person who does not want to do more harm to the environment by continuing to drive my car. This is a simple solution to keep more emissions out of our air.

Thank you for your time and consideration.

Thank you so much.

You can put the original signature page back with the full package and put the package on my chair.

Thank you! Are you able to work on some VW stuff? What is your phone number?

Subject: I'm staying on VW for a bit longer!

Hi All,

After six weeks on Gold King Mine, Christie is back from the Emergency Operations Center today and back to her regular beats. But because it makes sense for her to continue with Gold King Mine, and she knows how much I've loved working VW, we've agreed that I will stay on it for at least the week. We'll reassess after that.

Looking forward to continuing working together on this!
